From: k0rgr
Topic: 1 Message: 1

I read something on eham.net from someone who suggested this as a way to encourage activity and interest in the club, so I figured that since it costs nothing and only takes a few minutes to set up, it was worth a try.

You can use this as a vehicle for discussions on any topic of interest to the club. I do need to approve your new membership, though, so we don't get inundated with spammers.

2. Hello everybody !

We're slowing getting signups for this discussion group - we're up to 11 now. We'll keep recruiting.

Does anybody have extra rolls of coax available for Field Day? I've ordered two big ones, but I'm not sure they're going to get here on time.

How long a run do you need, and what kind of coax? I have some
LMR-400, and may have some RG-58 and/or RG8.

5. Field Day, and Welcome

Yahoo group: rochester_hams
Date: 2006-06-26 03:52:03 UTC
From: k0rgr
Topic: 5 Message: 5

Well, this was the wettest Field Day I can remember, but of course, I am from California where it never rains, right? I remember getting a bad case of hypothermia out there one Field Day, though, so it's not all sunshine.

I think we had a great time. I am told that for the first time in years, we made more phone contacts than CW contacts. The band conditions were strange. 15 meters was open extremely late - I think we were making contacts after midnight. 10 popped open from time to time, but I think 40 meters was the workhorse band. We had one 9 year old operator at the GOTA station (which was mercifully set up indoors this year!). He overcame his mike fright to make one contact, and then kept plugging until he got another one. Brad's vertical that I loaded up on 80 meters had no trouble working the coasts - even broke some pileups.

I want to welcome 4 new members to the group. One of them is a graduate student at the U who lives in Rochester, and wants to get started in ham radio and our group - Welcome! Our next set of classes starts on the last Saturday of September, and runs two consecutive Saturdays. If you don't want to wait that long. we can recommend several different ways to do self study. We're also in the process of developing the new classes for September, since the question pool and the study guide have changed.

I'll also suggest for any new person to ham radio, there is another Yahoo group : HamRadioHelpGroup that's run by a friend of mine in Peoria, Don, KD9UMT. There are dozens of knowledgeable hams who participate in that group to answer any and all questions. We'll be very happy to help you, too, of course, and we can help with more local information.

I'm going to be gone until July 3. In case anybody asks, EchoLink is shut down - we were using the power supply for Field Day. I'd prefer to just leave it off until I return.

73, K0RGR

6. RochHams group to be shut down

Yahoo group: rochester_hams
Date: 2006-07-04 02:25:49 UTC
From: Chuck
Topic: 6 Message: 6

FYI ... for those of you who on the RochHams YahooGroup that I started over two years ago ... it's been stagnant and never became the regional group for hams that I wanted it to become. With this Rochester_hams group now created and with me moving from the area, I thought I'd pass along that I intend to shut down the RochHams group in the very near future. I posted a message on that group to that effect, but in case you missed it and you are on this group, too, know what will transpire.

Any questions, holler.

Be sure to mention this group at meetings. Groups are hard to get started especially for a small universe like this one. they usually die early.

From: k0rgr
Topic: 9 Message: 9

Yes, I forgot to bring it up last night. I was in a little bit of shock, I guess because I knew that our speaker was not planning on having a real long presentation. So when the business meeting concluded after 10 minutes, I was afraid we'd be all done by 7:30.

Fortunately, I think it worked out pretty well. The presentation was a little longer than expected, and then Bob played his audio recording, and the video after that. I think the video was even more interesting than the audio recording. If you missed it, it showed how Hallicrafters used lots of Radio Amateurs to build a very important transmitter in WWII, based on an older ham radio rig. There was a good section that showed what 20 meters sounded like before the war.

From: k0rgr
Topic: 9 Message: 12

I see we're up to 28 members on this group now.

If I fail to remember it tonight, somebody else remember to mention this group at the meeting!!

I hope everybody enjoys tonight's program.

First, we'll have the presentation of awards for the 2 Meter contest.

Then, you get to listen to me as long as you can stand it.

I'm going to start with a brief EchoLink update, to talk about some new features I hope people will enjoy using.

Then, I have three fairly substantial presentations - we'll see if we can get through them all in one sitting.

Presentation #1 is on 'WINLINK' - an email program that ARRL has adopted as the 'official' digital program for ARES, and that is expected to eventually replace the National Traffic System.

Presentation #2 is a very brief overview of the DSTAR digital voice and data system. We may want to consider using DSTAR to enhance our disaster communications.

Presentation #3 is another brief overview of ham 802.11 networking, showing the work done in Irving, TX, and how they use a ham 802.11 network to cover a 20 mile bicycle event.

13. United Way

Yahoo group: rochester_hams
Date: 2006-10-11 13:44:33 UTC
From: k0rgr
Topic: 13 Message: 13

I meant to bring this up at last night's meeting, too. It's United Way time again, and I want to remind everybody that both Rochester Amateur Radio Club and ARRL are bona-fide charities, and can be designated to receive UW funds.

Right now, the club gets $40 a month, I think, from UW contributions of members.

14. FCC ACTS - but not finished yet...

Yahoo group: rochester_hams
Date: 2006-10-12 14:48:53 UTC
From: k0rgr
Topic: 14 Message: 14

OK - FCC has adopted the 'Omnibus' NPRM that's been hanging out there for years. Still no action on 'no-code' or the bandwidth proposals - maybe next year?

The Novice and Tech subbands on HF are now history. Coded Techs and Novices will have all CW-only General bands on 80,40,15, and 10 meters. The phone bands have been expanded - down to 3600 on 80 meters!

There are MANY small changes. VoIP (ala EchoLink) is now explicitly legal - including the 2 meter uplink to the repeater (an unexpected change!). The Kenwood remote control system that uses a 2 meter downlink is also legal.

Spread spectrum will now be legal on 222 Mhz, opening the possibility of cheaper ham-only wide-area broadband networks.

Digital users can now send pictures on HF digital frequencies, too.

21. Welcome K0BAS

Yahoo group: rochester_hams
Date: 2006-12-19 15:23:35 UTC
From: k0rgr
Topic: 21 Message: 21

Brian, K0BAS has joined our group. He says he has been away from ham radio for a few years, and is looking for a local group to join.

Let me invite you to the Rochester Amateur Radio Club, Brian. We have meetings the second Tuesday of each month at the Red Cross building on 3rd Ave. behind the fairgrounds. You'll get acquainted or reacquainted with the locals pretty quickly there. Details are on the club website : www.rarchams.org .

OK, the other shoe has now fallen. What does everybody think about the FCC dropping all code tests? I'm a little excited about all the Techs geting 10 meters and their new CW priveleges on HF. Were I a Tech, I'd get a receiver on 28.4 Mhz. to monitor for band openings - there have been quite a few this year, in spite of the sunspots (or lack thereof). I wonder who the first Tech will be to use computer-generated and copied code on their new HF bands? As long as they keep the speed under about 30 WPM, I will copy them fine. Hopefully, they will be able to copy my keyboard with their computer.

Or, will all the Techs upgrade to General and never use their new bands?

22. Re: Welcome K0BAS

From: k0bas
Topic: 23 Message: 23

Will there be any general classes coming up soon? Would anyone else like to take classes and test for general before the question pool changes?

Brian

24. Welcome N0DWE

Yahoo group: rochester_hams
Date: 2006-12-29 13:23:32 UTC
From: k0rgr
Topic: 24 Message: 24

Dennis, N0DWE has joined our group.
Welcome!

I've been hanging out on 80 meters a lot lately. Since FCC expanded the phone band, and eliminated the old Novice band, there seems to be quite a bit of new activity.

Of course, I expect to see a lot more after the 'No Code' rule becomes effective - probably some time in February.

In anticipation of a horde of Techs wanting to upgrade to General now that the code tests are kaput, I'm thinking about holding a General class prior to the next exam session in March. John, K0LLC, built a wonderful General course that we've only used one time, and the question pool changes in July. It would be nice to get at least one more use out of John's hard work before it is obsolete.

I've had a few people tell me they're interested. Anybody else?

As for the new Tech HF priveleges. Don't despair because you want to get on 80 meters but can't copy the code. There are some computer programs that actually do a great job of copying code. I've been playing with the 'CWGet' program. Now that I've figured out how to use some of its best features, I find that it can copy a wide variety of Morse 'fists', and not always under perfect conditions.

Note: there is no substitute for learning code. But I am convinced that CWGet and probably some other programs out there are good enough to allow you to have QSO's with other people using similar software. Of course, if you use a program to send code to me at a reasonable speed, I don't need a computer to copy it, and you should be able to copy the code I send with my keyboard. So, potentially, everybody gains.

Someone is starting a 10 meter SSB net locally. Perhaps we should add a 10 meter CW net at night for Techs wanting to try using CWGet?

27. Contest Reminder

Yahoo group: rochester_hams
Date: 2007-01-18 17:57:55 UTC
From: k0rgr
Topic: 27 Message: 27

Just a note to remind everybody that the January VHF Contest is this weekend.

RARC members - we're having a club competition. Prizes will be awarded for the top 3 finishers in two categories - 'FM only' and 'All modes'.

If you want to be included in the club's club score, please send me a copy of your log within 1 week. I need to send in a summary within 10 days.

Visit the ARRL website for the detailed contest rules, sample log forms, etc., or ask your questions here. Most of us are in grid square EN34. But, if you live south of S16th Street - the street south of the mall - you are in grid EN33 - which is a semi-rare grid.

The contest starts Saturday at 1 p.m. and runs until 10 p.m. Sunday. No repeaters can be used, it's simplex only. FM user cannot use 146.52 Mhz. - they can use all of the other recognized simplex frequencies, however - 146.49, .55, .58 and others.

If you choose to get on and only make a few contacts, there is a web page accessible via the ARRL web site where you can make your contest entry online. You can also submit paper logs, but they must be on a copy of the approved form, or you can submit electronic logs in Cabrillo format. You cannot submit printouts from word processors or database programs, however.

28. Welcome K0MD

Topic: 28 Message: 28

Welcome to the group, Scott. This is a mostly silent bunch, but I find it useful as a way of disseminating info to those who've subscribed.

This weekend is the January VHF Sweepstakes contest, and RARC is having a competition within the competition. Prizes to the top three finishers in the "FM Only" and "All modes" categories. Logs to me, K0RGR@... by next weekend. We also want as many people as possible to join our club effort by submitting logs indicating that their score should count toward RARC.

I got some (RG8MINI) from a seller on ebay last week. Pretty good deal I think. 100' with ends shipped for less than $55.00

I have a OCF Dipole (windom) that I am going to be taking down if you want to it a try in place of your G5RV. It works very well here but my XYL is after me to slim down on the antenna farm. It has 100' of gray jacket RG8Mini on it.

Let me know if you want to give it a try.

Roger Kroupa is using the old Pawn America store next
to k-mart to sell off what is left of his retail
communications store. He is offering the building to
hams that want to buy sell or trade items in the store
while he is using it. Cost is one dollar to enter the
building. Electricity is furnished free and you can
tail gate on the lot if you do not want to carry items
into the store. This is not officially a ham-fest. The
date is February 17th from 8 to 1. Doors open at 7:30
for set up.

Thanks for the offer, Brian - I was looking for this last summer!
We'll probably need some more this in June when Field Day rolls around
again.

I'm working on a couple things right now. I decided to release some
long-held money and am going to use some for ham radio purposes. I'm
looking at the IC-7000 fairly seriously. I can really use an HF
mobile. I just bought a used TM-D700A for the car, so I should be QRV
on APRS pretty soon, again.

For Field Day, I'd like to come up with a receiver that is more immune to front-end overload than what I have been using. Another option I want to explore is building some narrowband bandpass filters so that ideally, someone can be on 20 meter CW with a KW and somebody else on 20 meter SSB.

38. MNQP

Yahoo group: rochester_hams
Date: 2007-02-04 14:11:18 UTC
From: Dave Naatz
Topic: 37 Message: 38

Thanks for the reminder Brad, it was good to see it as my frozen brain needed a memory jog (reason - just back from a week in Cancun, left at 88 deg Fri afternoon to arrive in MSP at 9 deg only to wake up to -9, yeck).

So I got on the air by 11am downloading the logging SW fm W0AA website and worked a bunch on 20m SSB including locals N0MGY and KI7K. After helping the wife with some post vacation stuff I got on mid afternoon and worked more, then we had to run into Target which took longer than planned so only got on 80m and last run at 20m right up to 6pm stop time. Finished with 90 Qs, all on SSB as the frozen brain just could not get psyched into CW. Brad did you get on as well? I like these casual contests, I missed this one last year being on a cruise (gee, you guys will think all I do is go to warmer places in winter).

I am not sure how this groups posting goes, I suspect it may show up to everyone but I guess that is ok too, get more thinking about this other form of internet communication. If others did operate pass on how many QSOs you made as well. 73s de Dave K0VH

Glad to hear Mike and Rich were on. I reminded Rich at breakfast on
Saturday. He didn't seem convinced that he'd have the time to
operate but it sounds like he found the time.

Didn't the FCC ban CW?!? (Just Kidding.) No, I wanted to get on
the air during the contest, but became busy helping a friend get
some technical tasks done for his billiard business. As a result, I
did not get home until it was too late. Not as big of an operating
window as the VHF contest... That said, I had a great time
operating the VHF contest both from my QTH and W0VB's QTH. That
weekend, Terry and I found out we could not operate both station
locations at the same time because we caused each other _major_
QRM. I guess one of us has to move; this grid isn't big enough for
the both of us. ;-) K0RGR was very strong at both locations too,
but he was far enough away that it did not cause problems.

In all seriousness, working Terry's QTH was a great experience in
multi-op multi-station contesting (it would make a good club program
topic.)

It was good to hear club members on the air during the VHF contest.
I'm glad to hear some of you were on the air for the MN QSO party.
I look forward to participating in future contests, and hearing some
of you doing the same.

A good friend of mine owns the Hangar. Anyone interested in getting
dinner there prior to the training session?

42. Radio Classes

Yahoo group: rochester_hams
Date: 2007-02-16 17:58:50 UTC
From: k0rgr
Topic: 42 Message: 42

OK - I have only 2 signups for the Tech Class and 5 for the General Class.

I intend to go forward with the General Class, and Don, AD0F has agreed to help. I could use some more volunteers to help teach - the materials are all prepared - no writing needed.

I've asked the other members of the committee if they agree that we should do the Tech Class as a 'walkthrough' of our new materials. We have two willing 'guinea pigs', and I think we should give it a shot. Then, we can focus on recruiting for the rest of the year, so we have a full class in the Fall. If you'd like to help with the Tech Class, let me know. We still have materials that need to come together for this class. I think we're the only group in the country that's rewritten their class to fit the new book. If I had it to do over again, I guess I would not do it that way, but it seems to me that if you're discussing "Chapter 6" it's nice if the class matches the book.

43. Cellphone Legislation

Yahoo group: rochester_hams
Date: 2007-02-16 20:30:52 UTC
From: k0rgr
Topic: 43 Message: 43

I just sent this to my state representative. There is an effort to outlaw cellphone use in automobiles, and at this point, it looks like that law may well wipe out mobile ham radios, too. Here's my letter to my assemblyman:

to: rep.andy.welti@...

Dear Rep. Welti -

It was a pleasure to meet you during the last two campaigns when you visited my house. On both occasions, you asked if there was anyting of concern to me at the time. I couldn't come up with anything, but here is one.

I'm very actively involved with the National Weather Service SKYWARN hazardous weather reporting system. As such, I need to use my 2-way ham radio to communicate with the local Emergency Operations Center and NWS La Crosse. SKYWARN spotters are used by NWS to provide local verification of what their long-distance radar is telling them. Ham radio spotters in Minnesota have been credited with saving lives by detecting tornadoes and spreading the alarm in advance of the storm.

On many occasions, I've had to chase storms across Olmsted County into the neighboring counties. There are no 'hands free' attachments for any of the commercially-made amateur ham radios, which closely resemble commercial two-way radios, or police radios.

Two-way radios do not operate the same way as cellphones. A cellphone is a 'full-duplex' device, like a regular telephone. When using a cellphone, the user is more directly engaged in the conversation than with a 'push-to-talk' two-way radio, because with the full-duplex system, he has to formulate a more immediate response than with a 'push-to-talk' based system. I know that for me, the radio is a major safety plus, because it keeps me more alert while driving.

I would like to see a blanket exemption for amateur radio mobile operations, as I do not believe that there is any science to support outlawing the use of amateur mobile radios, and our participation in public service activities like SKYWARN and many others are too valuable to lose in a law that is too overly broad. Amateur radio operators are licensed by the Federal government, so there are also questions about the constitutionality of any state law that would outlaw an activity that is regulated by the Federal government.

44. Cellphones

Yahoo group: rochester_hams
Date: 2007-02-16 20:56:31 UTC
From: k0rgr
Topic: 44 Message: 44

Here's a letter Grant, KC0JOO sent to our assemblyman:

Minnesota Representative Andy Welti,
387 State Office Building
St. Paul, MN

Dear Andy,

In regard to new legislation regarding mobile cellphones, I hope the House and Senate act responsibly when considering this type of legislation.

First of all, all drivers are not created equal. We have drivers out there who are retired professional drivers, police and state troopers. I have been in a patrol car with a trooper while chasing a car at 130 mph. During that time, the trooper was talking on his radio, operating his laptop, talking to me and I felt perfectly safe. When I asked him about driving at that speed and multi-tasking, he said, "well, it does get tricky when there's ice on the road!" Should a recently retired trooper now be told that he must not use a cellphone while driving?

Second, we have other drivers who barely passed their drivers test. Some of them should not ever venture out of their driveway or, heaven forbid, onto an expressway. No law, can effectively deal with STUPIDITY ☐ woman drivers who put on their eye liner with their nose 2 inches from the center mirror, the many drivers I have seen reading magazines and newspapers while driving, or trying to referee a back seat fight between children.

The law, however, has to treat everyone equally. Is the new legislation going to be enforcible against law enforcement officers on patrol? They may need to talk on several radios and a cellphone almost simultaneously! Will the new law prevent Radio Amateurs (hams) from communicating, as unpaid county employees, during a tornado warning? If so, many SKYWARN operations will become highly difficult to manage when trying to get to an area to report dangerous clouds and squall lines; lives could hang in the balance here. Minnesota has a Statute that allows radio amateurs to possess and operate radio equipment that can receive emergency police communications. Please see MSA 299C.37. If another law must be added to the mix, can we provide a similar exemption for radio hams trying to save lives?

Minnesota already has a workable law on the books. It's called, "INATTENTIVE DRIVING!" The problem is, the police are already swamped with calls, some life threatening, and if they spot an idiot doing

what they shouldn't do, they simply don't have the time or resources to act on it. Passing more legislation may provide us with a psychological placebo after all, we did do "something!" Will it make us better drivers? Experience tells me that those who shouldn't multitask will do so anyway, law or no law. We need to do a better job of teaching drivers how to be better drivers and avoiding any activity that may interfere with the very real immediate task of driving safely.

I'm including here (below) for your convenience, an article that appeared in the latest email circulation for the American Radio Relay League (ARRL).

Best regards,

Grant E. Kemp (FCC License KC0JOO)

==>"CELLULAR TELEPHONE" BILLS POSE POTENTIAL PROBLEMS FOR HAM RADIO OPERATION

Bills aimed at thwarting "driving while cellular" and "driving while distracted" behavior have been introduced in several states, and most are worded broadly enough to potentially proscribe some Amateur Radio mobile operation. ARRL Regulatory Information Specialist Dan Henderson, N1ND <reginfo@...>, so far has catalogued 11 active pieces of legislation.

Bills introduced in Montana and New Mexico have been sidelined for now, but related measures -- more than one in some states -- remain alive in Georgia, New Jersey, Oregon, Texas, Vermont, Washington and Wyoming. Henderson reports that ARRL Field Organization volunteers and members called the League's attention to the various pieces of pending legislation, none of which specifically exempt Amateur Radio mobile operation.

"In most cases we try to work to have language exempting Amateur Radio inserted into the bill, rather than narrowing by definition the behavior or activity the bill seeks to address," Henderson explains. "It is a far easier approach and removes ambiguity down the road."

Henderson says that, if requested, the League will advise radio amateurs preparing to testify about a bill before a state legislative committee. "We offer some suggestions regarding what to cover and how to approach their testimony," he said. "We also will speak with legislators or their aides to try and clarify questions or help them craft language that help accomplish our goal of specifically exempting Amateur Radio operation from these measures." Most of the measures

include exceptions for emergency communication and law enforcement agencies.

In Georgia, House Bill 5 (HB 5) would assess those anyone found to be "driving while distracted" while using a wireless communication device one driver's license infraction point. The bill defines "device" to cover not only cellular or mobile telephones -- whether or not they're hands-free, but any "wireless communication device, personal digital assistant, radio or citizens band radio." HB 5 thus appears to include such routine activities as changing the station on your car radio.

In Montana, House Bill 233 (HB 233) would restrict drivers from "the use of electronic communication devices, or any other activity that causes the driver to become inattentive." This bill was tabled in committee on January 30, following a hearing a few days earlier.

In New Jersey, Assembly Bill 1966 (A 1966), would broaden the scope of that state's existing law prohibiting the use of a hand-held wireless telephone while driving. It would expand the law to cover "distracted driving" by prohibiting a motor vehicle operator from engaging in "any activity unrelated to the actual operation of a motor vehicle in a manner that interferes with the safe operation of the vehicle."

In New Mexico, House Bill 241 (HB 241) would prohibit a driver from using "a mobile communication device while operating a motor vehicle." The measure has been tabled.

Three related bills now are in play in Oregon: House Bill 2482 (HB 2482) and Senate Bill 293 (SB 293) contain essentially the same language, making it an offense to operate a motor vehicle "while using a mobile communication device" without a hands-free accessory. Senate Bill 246 (SB 246) establishes such behavior as an offense, punishable by a fine of up to $180 and providing more serious consequences if property damage, injury or death result -- up to and including license suspension and prison terms.

In Texas, Senate Bill 154 (SB 154) would prohibit a motor vehicle operator from using a "wireless communication device" while under way, unless equipped for hands-free operation.

In Vermont, two measures are in play. House Bill 31 (HB 31) would make it a violation to use a "cellular telephone" while in motion on the highway, except in the event of an emergency. Enforcement would be secondary; ie, police would have to first stop a driver for a suspected violation of another traffic offense. A more-restrictive bill, HB 126, addresses "distracted driving," and cites "any activity involving the use of one or both of the driver's hands if the activity is not necessary for the operation of the vehicle or any of its installed accessories." The bill would include activities ranging from smoking, eating or drinking to "performing personal grooming," "interacting with pets or unsecured cargo"
and "using personal communications technologies." Hands-free cell

phone operation would be permissible, however.

In Washington, House Bill 1214 (HB 1214) would outlaw such activities as "reading, manually writing or sending a message on an electronic wireless communications device." The measure does not include an exception for hands-free devices.

In Wyoming, two nearly identical measures are alive. The more general legislation, House Bill 152 (HB 152) addresses using "a cellular or satellite telephone while operating a motor vehicle" without a hands-free device. House Bill 284 (HB 284) contains essentially identical language but specifies drivers operating under an "intermediate permit." Both incorporate an exemption for Citizens Band, but not for Amateur Radio operation.

Henderson advises ARRL members to contact their Section Manager <http://www.arrl.org/FandES/field/org/smlist.html> to learn about any initiatives under way to address the ham radio implications of a particular state bill.

Bob - are you the person doing the Boy Scout Radio Merit Badges or is that Eric?

I read an interesting story on eham today about how a radio club in Missouri puts on a dog and pony show for the scouts each year - in addition to the JOTA. http://www.eham.net/articles/15993

They have an advantage - their club has quite a club station. But, maybe we could either find a place to set one up for a day, or see if we can borrow one?

I think Boy Scouts might be a good place for us to focus some efforts. The kids are at the right age and haven't yet discovered girls.

I just checked the Gamehaven Council web site, and I see that Lou
Behrens is running the radio merit badge at the council's merit badge
fair in March.

(I'm pretty sure that I'm not the Bob this group note was intended
for, but I hope that answer helps.)

I just sent this to my state representative. There is an effort to outlaw cellphone use in automobiles, and at this point, it looks like that law may well wipe out mobile ham radios, too. Here's my letter to my assemblyman:

to: rep.andy.welti@...

Dear Rep. Welti -

It was a pleasure to meet you during the last two campaigns when you visited my house. On both occasions, you asked if there was anyting of concern to me at the time. I couldn't come up with anything, but here is one.

I'm very actively involved with the National Weather Service SKYWARN hazardous weather reporting system. As such, I need to use my 2-way ham radio to communicate with the local Emergency Operations Center and NWS La Crosse. SKYWARN spotters are used by NWS to provide local verification of what their long-distance radar is telling them. Ham radio spotters in Minnesota have been credited with saving lives by detecting tornadoes and spreading the alarm in advance of the storm.

On many occasions, I've had to chase storms across Olmsted County into the neighboring counties. There are no 'hands free' attachments for any of the commercially-made amateur ham radios, which closely resemble commercial two-way radios, or police radios.

Two-way radios do not operate the same way as cellphones. A cellphone is a 'full-duplex' device, like a regular telephone. When using a cellphone, the user is more directly engaged in the conversation than with a 'push-to-talk' two-way radio, because with the full-duplex system, he has to formulate a more immediate response than with a 'push-to-talk' based system. I know that for me, the radio is a major safety plus, because it keeps me more alert while driving.

I would like to see a blanket exemption for amateur radio mobile operations, as I do not believe that there is any science to support outlawing the use of amateur mobile radios, and our participation in public service activities like SKYWARN and many others are too valuable to lose in a law that is too overly broad. Amateur radio operators are licensed by the Federal government, so there are also questions about the constitutionality of any state law that would

outlaw an activity that is regulated by the Federal government.

I did not see any replys to your note Rod but welcome to ham radio!
I have never replied to this forum so will give it a try.

Are you in the SE MN Rochester area? Your address shows as Windom.
I am sorta familiar with that area as my mother is moving from near Marshall back to the Austin MN area. Hopefully you'll pick up the general class license very soon and get active as the 80-10 meter HF bands improve in the next few years.
Check out our website http://www.rarchams.org. and there are many other ham links as well.
Good luck and 73s

From: k0rgr
Topic: 54 Message: 54

For those who are not involved with it, but may have caught wind of what's going on with all the repeaters in Olmsted County, let me bring you up to speed.

We have an individual who appears to be seriously disturbed who has taken up residence on our local repeaters. The big issue is that he periodically gets on the repeater, or transmits directly on the output frequency, and issues monologues on a variety of subjects that seem to indicate that his grip on reality is slipping. Everyone in Rochester is crooked and out to get him, apparently.

We have reason to believe that this individual may be in need of professional medical intervention. He has been asked, in writing, to stay off our repeaters, but he continues to operate there. The 147.255 repeater was shut down last evening to keep him from using it illegally.

I would advise you to know who you are talking to before you agree to meet anyone you've talked to on the air. The ham club meetings should be safe!

Bill,

There's word around that Donald may be at the Dorothy Day house - at 703 1st Street SW. They are closed until 4:00PM. I'm willing to go there at that time and ask for him if that seems like the right thing to do. If he's there, I'll call Jon's cellphone immediately and let the police take it from there.

Grant

Tooooooo Many hobbies.... One has to go. all this after I just got back into the hobby...

If someone is looking for a bunch of ham gear, let me know. I am selling off all my gear except for my mobile setup. So much stuff to list... I would like to sell it all in one lump deal.

IC-735 with head set
LDG AT-100 Auto Tuner
Hustler 5BTV
100 ft of coax

Yaesu FT-7100
No Name dual band fiberglass base antenna
100 feet of coax

One vary large power supply in a rack mount... something like 50-60 amps at 13-15 VDC. It ran everything at once with no problem. Very Heavy, bring a truck.

Alinco DR-135 with 1200/9600 TNC installed.
Dual Band Mobile antenna.

Misc cables and connectors. Ground rod, extras...

Will consider trade for audio gear... Klipsch speakers, or something on that order... Or maybe something else... Make an offer...

I will sell all for $700 or best offer... You come and get, will not ship, but I will help load your truck.

63. New Ham/Security Reminder

Yahoo group: rochester_hams
Date: 2007-04-23 16:12:45 UTC
From: k0rgr
Topic: 63 Message: 63

Hi everybody - I got good news today from Scott, W0MD - his daughter Katie passed her Tech test. That makes two of Scott's daughters with licenses, and one more who took our class waiting to take her test soon.

Now, I also want to pass on some important information.

I've learned that we have someone in our area that likes to monitor a scanner radio and use any personal information he manages to gather in disturbing ways. I'm not sure if this person is a real threat or not, but according to my information, he has a felony record, and has been detained as a potential danger to others in the recent past.

So, try to avoid giving out personal information on the air. I know I've caught myself mentioning that I was going out of town for a few days, or that my car was going to be conveniently parked somewhere for a period of time.

We thought this fellow was only listening to us on 2 meters, but he can apparently scan the VHF/UHF spectrum, so the UHF repeater is not safe, either.

I don't think I'd worry too much about 10 meter SSB, but even there, anybody could have a receiver.

I hope you guys in the group can see these. If you were at this past Tuesday's RARC meeting you heard Stew W0SHL talk about the Scarborough Reef DX pedition this past weekend. It's only when you look at these photos that you can tell what type of combination "hobby craziness" or extraordinary dedication these guys had. This is no vertical on the beach in the tropics kinda deal. Unreal.

69. Ten Meter Eskip

Yahoo group: rochester_hams
Date: 2007-05-15 22:36:51 UTC
From: k0rgr
Topic: 69 Message: 69

Has everybody else been catching the Eskip on 6 and 10 lately?

The other night was pretty wild. 10 sounded almost like it was an F layer opening, but all the 'DX' was from the East and South.

I described a condition a while back where you could be in QSO with someone on a 10 meter frequency only to have the propagation change and find yourself talking to someone else who was also in QSO with somebody else on the same frequency a minute earlier.

I've mostly just been on in the evening during the drive home. I work until 7 most nights, now, so it's a bit later than most commuters.

Bill,

I have been on 10 meters lately with the kids and have noticed similar things to what you have described. Ashley (KD0APJ) and I had qso's with stations in Rochester, MN; Richmond, VA and Southern Georgia with the later two being strong and then fading...out. One qsl'ed us and told me that he lost me and heard another Mn station loudly!

Thanks for explaining what we heard and experienced.

Sounds like you are working long hours these days. What do you run mobile?

Scott

Last night was particularly interesting.

I worked a fellow in Georgia on the way home from work. The band was up and down. At times, I was hearing so many beacons that they QRMed each other. SSB signals were popping up all over the band.

I didn't get back on until about 11 PM. There was only one QSO going on- a net that was centered on Houston. The net control and some of his locals were in here solid until they finally signed around 11:30.

My mobile rig is an IC-7000 and a short Hustler whip, mag-mounted to the roof of the car. The arrangement works well on the higher bands, but not strong enough for the lower ones. I did get a QSL last night from a guy in Phoenix that I worked on 40 meters from I35 in Iowa a few weeks ago. So, it may be rather lame, but it does get out.

I believe that brings us to 34 members now.

This weekend, I intend to take a pitchfork to the shack and try to catch up on projects that have eluded me all winter. I'd like to get out and do some serious antenna work, too, if the weather is conducive.

Since 10 meters is such a blast right now, I think I will work on a better skyhook for that band. A J-pole would not be too difficult. However, after recently upgrading my cable TV service, I just got a bill this month that put me in orbit. I know that from my house, I can receive all kinds of UHF TV stations, mostly from Wisconsin, but I get the local NBC and CW networks, and the PBS station in Austin. For what they're charging me now, I think I can justify another tower and rotator pretty rapidly. If so, a rotary antenna for 10 might be a great idea.

Bill,

I have an Autek Research VHF Analyst, Model RF-5. Please go to http://www.autekresearch.com/rf5.htm. In the past, it has been an excellent tool for 2 Meters through 70 cm. You're welcome to use it for use on VHF and UHF. As I'm sure you know, it is NOT for HF.

80. "Voice Alert" with APRS

Yahoo group: rochester_hams
Date: 2007-06-29 16:30:01 UTC
From: k0rgr
Topic: 80 Message: 80

Is anybody else around here using "Voice Alert" on APRS?

I found a link to hints for configuring a Kenwood TM-D700 or D7 handheld, and it discussed this idea.

Basically, you set up APRS operation on the 'A' side of the TM-D700, and set it up for 'tone squelch' with a tone of 100 Hz.. You leave the audio up on that side of the rig, because the tone squelch will stop all the packet racket from hitting the speaker, but, if someone else is using "Voice Alert" - that is, sending the 100 Hz. tone with their packets, they will break your squelch when you are in simplex range. If you are hearing their packets, you can just call them on 144.390 simplex.

You could do essentially the same thing with a tracker, I think, since the tracker doesn't receive, anyway. The only problem I see with it is that your tracker might try to transmit when the channel is busy, because it can't detect the traffic.

Thanks,Daryl - actually, I haven't done it yet, either. I need to
reinstall my TMD700, then I have a number of things I want to try, and
that's one of them.

With the all the D700' and D7's around here, this could be interesting.

What is the level of interest in Technican classes for this fall?

If we will have enough students, I will schedule a class.

However, it looks like it will be difficult at best to schedule a class that will work with the VE testing schedule this fall. A class in September would have to be on Labor Day. Classes leading up to the VE session in December would need to be in mid-November.

How many likely students do we have out there?

Bill and fellow hams,

I propose we do a Fall class in late September over several Saturdays or evenings targeted at school age students. I suspect we could get 5 or so kids from Schaeffer Academy and maybe a couple from Century and some from the home school community. This would jump start our desire to set up a school station. Doing it in September gets it done before the Fall Sports rush hits and school gets too difficult. Doing it much later would not attract as many students; we have to remember this is the i-pod generation where learning is 'on demand' not like us old guys and girls who sat through lectures.

We should aim for a simplified curriculum with encouraging them to do on line tests to facilitate passing the exam. Following their licensing, we could teach them "ham radio orientation" as a way to help them learn more of the technical stuff.

Best regards,

Scott, K0MD

Sorry it took me so long to reply -

You make some very good points, Scott, and I can see doing what you're suggesting.

In the past, we've tried to at least cover the material in the book, in order to give the students more depth of understanding. I think that has served us well. However, this new book covers lots of material that IS NOT on the test.

By simply trimming out those items, we can shorten the class quite a bit. I had intended to try to merge the General and Tech classes. But, if we just focus on the required material for the Technician test, I suspect we could run the class in one Saturday or perhaps 3 evenings.

I'll work on creating a 'lite' class from the materials we developed last year. I've started editing and updating the class materials anyway, and it's usually easier to subtract than to add. I'll need to be careful that we're covering the test questions, though.

At this point, I think we're stuck with the ARRL book, as we rewrote the class to follow the book.

How do we recruit these students? As I said, get me 5 students, and I'll teach it anytime after work.

OK - I have scheduled the fall class for September 8th, at the Red Cross Building, from 8-5. I'm planning on this being a 1-day class, since I think we could have easily done the last one in one day.

I already have two confirmed registrations - Brenda Zeibel and her son.

I plan to get the books to the students at least 2 weeks in advance. That means I need to know who they are ASAP. Otherwise, they will not have much opportunity to study before the next VE session.

PLEASE - if you know someone who's interested, have them contact me:

89. New APRS function

Yahoo group: rochester_hams
Date: 2007-08-08 16:26:33 UTC
From: k0rgr
Topic: 89 Message: 89

from qrz.com:

Bob Bruninga's APRS, the tactical display application par excellence of hams on the move, is immensely popular because it is so useful. Well, Sylvain, VE2FET, just made it even more so by incorporating a handy new "function" into the already sophisticated system.

From your APRS software, simply write an APRS message to DOQRZ and any amateur Call Sign as the sole Message Content. Abracadabra and the clever interface will instantly link up to AA7BQ's world famous QRZ.COM website, fetch the station's particulars from Fred Lloyd's giant database and send them back to you on a flat bed.

All this, while you're driving at 70mph on the Interstate or elsewhere on the globe, in a car, a truck, an airplane, a boat, etc...

When your packet/APRS message is received by DOQRZ you will receive QRZ.COM info on the requested callsign.

Just try it, you'll see, it works!

Spread the word to the ones you know who use APRS. Especially usefull when mobile or portable.

Thanks Sylvain and thanks again Fred!!!

**Note 1: DOQRZ is "Delta Oscar... not Delta Zero...".

**Note 2: Technical Note: If you do not receive anything from DOQRZ make sure your packets reach an I-Gate station. For questions or comments contact Sylvain directly at ve2fet@... or http://www.ve2fet.com

92. September Classes

Yahoo group: rochester_hams
Date: 2007-08-21 19:44:40 UTC
From: k0rgr
Topic: 92 Message: 92

I've just ordered 7 books for the September class (Sept. 8th). I only have 3 confirmed students so far, but I intend to do this class anyway. This way, I will probably have enough books, and if I have extras, they will be around next time.

So far, my students are Brenda and her son from the Red Cross chapter, and a fellow I work with who has been listening to our flood relief efforts the last few days. Stan, I presume I need to call the people you gave me?

93. Disaster Relief

We got a great story in the Post Bulletin last night - it's also
posted on QRZ.com and somebody else posted it to eham.net .

http://www.postbulletin.com/newsmanager/templates/localnews_story.asp?a=304679&z=47

Kudos to all who are helping out. I'm getting ready to pull another
shift at the Red Cross this afternoon, myself.

From: k0rgr
Topic: 94 Message: 94

The last thing we like to hear on the air is somebody's medical issues, so I'll keep this very brief -

We were moving my daughter into the dorm at St. Cloud State on Sunday, and I managed to find a doorstop with my left foot. I don't know how I missed it with my eyes - they obviously recognized it as a hazard because they had painted it bright red. But, I immediately found myself laying on the ground, unable to move my right leg. The paramedics were able to wrangle my kneecap back where it belongs, and they stood me up. Everything seemed fine until I tried to take a step, and found myself headed for the ground again. After a couple ambulance rides and a long painful car-ride home, I wound up here at St. Mary's. The quadriceps tendon is missing in action, and hopefully that will get fixed tomorrow.

I am told there is a huge range of recovery time for this kind of injury. My brother, WB6HVW, had this two years ago, and it was 6 months before he could use the leg at all. Others have been known to walk out of the hospital. I am hoping for the best outcome, but realistically expect to be out of action for a few months.

I've already contacted Bob, K0SIR, about selling our house, so if you're looking for a place with lots of stairs so you can get lots of free exercise, let us know! It's one of the best VHF ham sites around. I will thrown in a tower and VHF antennas!

Anyway, I'm looking forward to getting back into life. The wireless network here seems to work great - I will get a mike and some earphones and do some EchoLink from here.

73, Bill

Topic: 96 Message: 96

OK, well, my knee is repaired and I'm rehabbing at Charter House. If you ever need a care facility, this is the one of choice. They have wireless Internet access here on the rehab floor, anyway.

It looks like I'll be going home on Tuesday.

Hey, I am looking for someone who needs an aluminum tower and is willing to do a little work to get it. I have a 30 foot Universal Tower - free to a good home. I would like to keep the rotator, but the rest can go.
We're working with Bob, K0SIR to get us a new hamshack with house attached, so the current antennas have to go. I intend to build 72 foot self-supporting crank up tower with the next mortgage.

Welcome to our new members. There are quite a few Rochester locals in this group now, so don't be shy about asking questions.

97. SUV rear gate mounts

Yahoo group: rochester_hams
Date: 2007-09-24 14:43:21 UTC
From: rochmn79
Topic: 97 Message: 97

I have seen these types of mounts to mount vertically on the tail gate of an SUV. How well do these work since there is no ground plane (like the roof for a mag mount) to broadcast?

From: phelpsbn
Topic: 97 Message: 98

I have two of them and they work well. They actually clamp on to the back gate, so assuming you have a metal back gate, I would imagine it uses it for ground much like a mag mount would do on the roof. My only complaint is that the feed line going to the mount is fairly small, and can get pinched in the back gate. Use zip-ties to try and keep it from harms way.

BTW, I did have a saturn, and I just sandwiched a metal plate between the clamp and the polymer trunk. I then ran a wire from that plate to a screw that bolted into the frame. This seemed to work too.

Howdy!

I hope you find this forum useful and interesting. While I'm at it, I'll throw in a plug for some other ham activities in the area.

http://www.rarchams.org - rochester radio club website - lots of good info.

146.82 (PL100)- Sunday nights at 9 p.m. - weekly ARES net
28.320 - Tuesdays (except club meeting nights) 8p.m. - 10 meter net

NEW SDR KITS AVAILABLE:

I just ordered my next HF transceiver and a second receiver. Total cost for both: $40.

You can get all the details here - http://groups.yahoo.com/group/softrock40/

I'm really looking forward to getting my 1 watt 40/30 meter transceiver on the air, as well as the 20 meter receiver. I think I finally have a PC that's fast enough to work with it. Unfortunately, it will be shared with EchoLink, so EchoLink may be down if I'm chasing DX someplace...

Speaking of EchoLink, KC0LLG is avoiding home because I put him to work every time he comes by. On his list of tasks for this weekend is helping me get EchoLink working in the family room, which is where I live now. So, I intend to get it back on the air this weekend. I also hope to install some of the new 'plugins' for it that will give it special new functions. We'll see how it all works out!

105. Schaeffer Academy Club Station

Hi everyone;
Beginning sometime Monday Oct.15 2007 the Schaeffer Academy Amateur Radio Club station will be on the air. Most likely after school and also during the 10 meter net on tuesday night. Starting monday is the school club roundup sponsored by the ARRL. Scott k0md and myself will be the school trustees for the station. We will be using w0mxw for our call sign until we get a club call. So please give the students calls if you hear them. Hope to hear all of your calls.

We will be on 80 thru 10 meters and maybe 2 meters.

thanks to all Bill n0nuv

That's incredibly good news !

I also got confirmation that our spring radio classes will be in the
community ed flyer -

They are telling me it will be another 3-5 months for this leg of mine
to heal, but as soon as it is ready, I will be available to teach Tech
classes. At the rate things are going, you will need a General class
for the kids by then. I better get to work on it! I don't have
anything better to do, I guess. I am working from home now, though.

Bill

I would like to see us offer a class at Schaeffer for the Tech licenses for students who become interested after the school station is unveiled. Would you be able to teach there by chance?

The school has given us a nice room with tables and computers so we could do the class right there for up to 10 students.

The antenna will allow 80-10 meter operation. We do not have anything on 2 or 6 meters yet.

I also think the TS820 is not an ideal rig for them to use. I think we should discuss what to do with it but I would favor upgrading their station to a non-tune HF transceiver.

Scott

I'll be happy to do a class for the kids anytime, as soon as my leg has healed. I get to go see the surgeon again this week - they said 3-5 months a couple weeks ago. Others I know who've had this tell me that's optimistic. But as soon as I can get around a little better, it would not be a problem.

If you can't wait that long, I will try to put the materials together for you to use - as I said a long time ago, before all this happened - I was working on your suggestions to streamline the class to remove redundant materials and 'nice to know' but not extremely critical materials, in terms of the test.

My biggest challenge is in guessing what age to write to. What would you suggest based on the kids in the club?

Hi Bill
Wow! The convalescence is long. I admire your patience.

I am not sure yet what age range we will tackle. Why don't we wait to see who might sign up for a soon to be extended invitation to study for a license? Then, you can design the curriculum even if I or others end up teaching it??

Thanks again for all your efforts for this.

The program is Project Get Outdoors. They meet every Thursday from 3-5 PM. I
have quipment etc, but what I may need is someone to answer a 2M call some
Thursday afternoon. I would schedule it ahead of time. Or if we could do a
small Fox hunt sometime at Carly State Park (12 miles NE of Rochester) it would
show kids about how tracking radio collars on animals works the same way.
These are young kids with some up to 14 yrs old.

This is a great article for anyone who thinks a modest station does not work. these are phenomenal results:

Some of us know code and some of us are “no code.” Some of the latter, including the author, now hold General and Amateur Extra class licenses.

A view of the balun and west leg of N9ABC’s indoor dipole antenna.

My modest station: Yaesu FT-897 transceiver, LDG Z-11Pro tuner, headset and clock.

Two QSLs from my DX activity: OX60AD, Greenland, and 5D5A, Morocco.
I’m a proud member of the group of people who, since February 24, have become radio amateurs with HF privileges without having to pass a Morse code exam. My adventures in ham radio to date may be both interesting and instructive.
First, the nitty-gritty. My shack qualifies for the worst-case scenario. I have a great rig and tuner -- a Yaesu FT-897 and a LDG Z-11Pro. My antenna, however, is an indoor 33 foot dipole with a balun in the feed line. Because of its substandard location, I somewhat affectionatelycall my antenna the “Krappo One.”
An indoor dipole? I can hear you snickering. CC&Rs (deed covenant, conditions and restrictions), right? No, much worse. It’s a matter of my wife’s restrictions on what she will tolerate outside. In this case, that means nothing unsightly that the neighbors can see.
With 100 W and my indoor dipole, you might wonder what I’ve been able to achieve. Well, after my first eight months on the air, I’ve worked 97 DXCC entities (formerly called “countries”), and have QSLs from 86 of them. “Not bad,” say I.
Using my tuner and my 20 meter dipole, I can also get on 40, 17 and 15 meters. Most of my contacts have been on 20 meter SSB, although I have started to play with PSK31.
So, what DX does a newbie from the Midwest encounter on HF? If I rounded up the usual suspects they would include contacts with Europe, the Caribbean and South America. Within Europe, Italy, Spain and Russia seem to be the most plentiful. Their friendly hams appear willing to work with newcomers to the HF bands. Being a glutton for punishment, one day I dropped my power to 10 W and still was able to work Slovenia.
Many Europeans seem to enjoy short QSOs (often just an exchange of signal reports) and then move on. Not so for many of those from the United Kingdom. They love to chat. Bless them for putting up with my low power, marginal antenna and puny signal. Contacts with Africa have been sparse. I’ve worked a handful of Moroccans, Algeria, Liberia, Madeira Island and little else. The Caribbean and South America hold a special place in my heart. Operators in those parts of the world generally seem friendly and interested in working stateside stations.
The lesson here is that even with minimal gear and a compromise antenna, it’s still possible to have a lot of fun on HF, including working DX.
What I Have Learned So Far
Lesson 1: Courtesy and patience are the golden rules.
Lesson 2: Find an Elmer, someone who can be your mentor. I’ve gone “two better” and have three of them. All have provided invaluable tips and hints. All are long-time hams who have been there and done that. They are patient and more than willing to help me out with

problems and questions.
Lesson 3: Not all days are created equal. Propagation at this point in the solar cycle seems to vary not only from day to day but according to the time of day. Find something else to do when propagation is poor, unless you enjoy warming the ionosphere. This brings me to “Steven’s Rule of Woe”: The amount and quality of DX available on the air tends to be inversely proportional to the amount of time you have available to hunt DX.
Lesson 4: Timing is everything. I’m learning to operate like an ant dancing with elephants. Although outgunned in power (and antenna system) by almost everyone else on the air, I’ve already learned about using timing to break a pileup. One recent evening, I worked Algeria by listening to the pileup and noting a pattern to the QSOs. I determined that after the DX station called CQ, about six seconds into the caterwauling of call signs there almost always was a slight one-second lull before he either answered a station or the bedlam resumed. I timed my call to hit that lull, and, sure enough, I got through and he came back to me.
This method has worked over and over for me. Although each pileup seems to have a different pattern, there is almost always a pattern to be found. If you’re running low power, try timing your calls for the lulls in pileups.
Lesson 5: Every dog has its day, and every region has its time of day. Different regions tend to have better signals at different times of the day. For me, the Caribbean is good in the early morning and late afternoon. South America also is good in the late afternoon. Europe tends to be good from mid morning to mid to late afternoon, while Africa has been good in the early evening hours. Your situation will differ depending on your location, but listen a lot and get a feel for when to expect to hear one region of the world or another.
Lesson 6: Stick to it! Pick a band, and learn it. I have chosen 20 meters and am learning its various ins and outs -- especially propagation and knowing what parts of the band yield the best chance of working DX. For example, I have found that above 14.300 MHz are a number of nets, and my chances of catching any DX there are not as great as in the lower end of the band. Like all rules, however, there are exceptions. Recently on 14.330 MHz I worked a maritime mobile out of Germany and had a nice 10 minute chat.
Lesson 7: Become a contestant. Early on I complained to one of my Elmers that contests clogged the bands on weekends and made it hard for me to DX. He wisely pointed out, however, that contests are golden opportunities. Join the contest, and go after the participating stations. I’ve snagged a number of DX entities this way.
Lesson 8: Listen before you speak! Very early on, I joined pileups even before I had solid copy of the target station’s call sign. I figured it if was good enough for others, it was good enough for me. This bad habit ended abruptly. One day using my timing technique, I broke a pileup to work what I thought was a great catch. His exotic DX location turned out to be a neighboring city, and I had to face his question as to whom I thought I was calling. Oops! Never mind!
Lesson 9: I have heard the enemy, and it is I. Using an indoor antenna I have sometimes caused RFI within the house. The Palomar Engineers RFI Kit of toroids and beads judiciously placed on telephone cords, computer mouse, keyboard wires and other key locations have helped me eliminate RFI within the house.
Lesson 10: CQ, CQ, CQ Whirlpool? Household appliances create interference, and having an antenna indoors only makes things worse. My front-loading Whirpool washer is one of the worst offenders. The faster its high-speed motor whirls, the worse the interference. Let’s see, clean clothes or DX? Guess which one wins out? Other offenders include two of our televisions and the fluorescent lights. All of the interference is radiated, not arriving via the power line. Detective Steve found that if you detach the antenna, the interference goes way. The moral of the story is to DX when no one else is home (or at least doing the laundry), or learn to live with some interference.

Final Observations
New licensees want and need to learn. Most want ham radio to be a great hobby not only for themselves but for their fellow hams. Veteran radio amateurs have a golden opportunity to help educate and teach new hams and shape their operating habits for life.
Unless you enjoy talking to yourself, ham radio will always be a matter of teamwork. Get on the air and join the team, and we’re all winners.
73 and good DX!

I've got a bunch of radio books that I haven't referred to for quite a while and are just taking up space. I'd like to pass them on to someone (individual, club, or library) who can use them.

I don't want to give these to someone looking for stuff to haul to a hamfest and sell or put up on eBay.

If you can use these or want them for your personal collection, please contact me. I'd prefer to give the whole pile to one person.

The Schaeffer school station could use about four of your collection for the students to have on file, and I will write you off the reflector about the specifics.

Thanks for your generosity,

Scott, K0MD

We're fixing to head out for vacation shortly. I haven't done AMTRAK for many years, so it will be a new adventure. Hopefully, my recuperating leg won't be too big a problem. I've made arrangements to get around any stairs involved, so it should be OK.

Has anybody else noticed that EchoLink is back up? I here people connect, and I don't think I've heard a complete QSO other than the couple I've had. I believe this is going to be down again for about 10 days - back up before New Years' though.

To all, Happy Holidays, Merry Yule, etc..

I will be holding a technician class on Monday evenings in Windom,MN (SW MN) at the BARQ CEnter (old High school) starting the first week of February from 7:00-to 9:00 with
the test by my w5yi group hopefully the first week in March. We have graduated 26 hams in the past one and 1 half years, our emphisis is public service (ARES) and most importantly getting new hams on the air on a regular basis. If you know of a ham and have not heard him on the air call and encourage him or her. Next week we are holding an informal get togather and constructing two types of vhf diapoles in this effort.

125. Happy New Year!

Yahoo group: rochester_hams
Date: 2008-01-03 16:04:52 UTC
From: k0rgr
Topic: 125 Message: 125

All the holiday travel is done and we've landed again, back here in reality. The wife and I had a good trip on AMTRAK, but next time, I'm going to bring my own seat cushion - two days is a long time for any seat.

Let me welcome two new members to the group - W0VLZ, Neil who is a longtime RARC member, and Alex, N0AKZ, who graduated from our 10/05 class.

I'm looking forward to '08.

Maybe this is a good time to see what other people are thinking they'd like to have happen with ham radio this year. Anyone are to share personal goals, and/or ideas for the club?

I'll throw out a couple things. We're working on moving, and I am hoping to create a new and much improved hamshack - real antennas are the main goal. I've got my eye on an acreage in Rock Dell. But if the XYL gets her way, it will be a condo.

They now have three DSTAR repeaters in the Twin Cities. Is anybody interested in doing DSTAR on 1.2 Ghz. around here?

I'd like to see us work on developing HF capability for disaster communications, and see what we can do about providing some non-voice methods for passing traffic.

RARC comment - we need to keep the momentum at Schaeffer rolling and try to establish a club at Century to at least get some interest going and (best case, probably too optimistic) get some signed up in our April class. Or maybe with a teacher/sponsor, try to get some signed up in the August back-to-school startup as an "official" school club for the Fall and 08-09 school year.

Personal comment & goals for new 08 ham stuff - with a "whopping" $12 investment over Christmas break I bought a USB-CIV control cable for between my PC and 9 year old ICOM 746 and in 10 minutes had the rig under PC desktop control. I downloaded DXLab freeware and am using it on PSK31 & AFSK RTTY as well with my soundcard (I have used PSK31 on/off for 5 years using Digipan). I plan to also try out N1MM logging software tomorrow and using that or DXLab make a few contacts in the weekend's RTTY PSK31 contest.

I also got a simple Garmin Legend GPS w/NMEA interface as a present from my son and intend to buy a TinyTrak to interface to either my main 50w mobile rigs or perhaps our old 5w Alinco handheld (feedback from some club APRS users indicate 5w is probably not enough but I am both unsure how to go back and forth in frequencies from 2m FM voice to APRS on the same radio ... AND more important, it's been too cold out to mess with this or play much outside with the GPS, so this may be a spring/summer project).

be a spring/summer project).

> I'd like to see us work on developing HF capability for disaster
> communications, and see what we can do about providing some non-
> voice methods for passing traffic. I agree - with our Field day antennas like the Force 12 vertical dipoles or a simple Hustler 4 BTV vertical, we could be HF operatioable in a few minutes from any location. I favor getting the trailer working and taking the tower out for use along with Yagi. If the grant gets approved that Kari Ann has applied for, maybe we could get a new Yagi that is easily transportable and covers 20-6 meters
>
Let's run this by AB0BW, W0STV and others for some warmer weather

Topic: 127 Message: 132

Scott,

Let's sort out the objectives of the project. I may be able to mentor a project better suited for Schaeffer and it would be an easier sell (even to the RARC in general):

1 - Operating QRP CW
2 - Building/using tube gear
3 - Building a ham radio project

Unless the Schaeffer club students are interested in getting on CW, #1 doesn't fit and #2 becomes some sort of simple receiver instead of the transmitter like in Jan 08 QST. This ups the complexity level quite a bit but you can see an example receiver that I built at http://www.io.com/~nielw/1951NoviceStn/1951NoviceHomebrew.htm

If someone is interested in #1 and #3 but not necessarially tube based we can find a single band QRP CW transceiver kit for them to build.

#3 has the broadest appeal, especially if it is a receiver that can work for SSB. I'd recommend the Ten Tec 1056 "Any Band" Direct-Conversion SSB/CW Receiver. See my web site at http://www.io.com/~nielw/tentec1056/loafpan_1056.htm .

If any students really are interested in building and operating tube gear I'd like to talk off-line about how that might work.

If the Ten-Tec or QRP kit project, it might work to do the project after school at Schaeffer. I could probably talked into mentoring these construction sessions.

Are any other RARC members interested in building a simple Ten-Tec (or other) non-tube kit?

73,
Niel - W0VLZ

Happy New Year everyone!

I just also ordered an CIV cable for my ic 735. I have tried MixW2 and a couple of other pieces of software. I would be interested in what others are using.

I have had good luck with MIXW. They've done a good job of keeping the code up to date as new modes have popped up. But the nice thing about the soundcard modes is that if you want to, you can switch. On VHF, I've also used WSJT to do meteor scatter, using the same setup.

I have a RigBlaster that's getting a bit old. I would like to try an external USB soundcard, or one of the new interfaces with one built in. I think the PC that's currently running EchoLink will eventually take over those functions, although the EchoLink is running so peacefully right now, I'd hate to mess it up. I'm working right now, so I'm not monitoring EchoLink, but I can hear the relays clicking as someone is using it.

I'm working on getting a better signal on 2 meters from down here in this hole.

137. Help with interface

Yahoo group: rochester_hams
Date: 2008-01-19 01:53:27 UTC
From: Charles Pederson
Topic: 137 Message: 137

A few days ago I indicated that I had ordered a CI-V interface cable, I did receive it, but I'm haveing trouble makeing it talk to my IC-735. Any suggestions would be appreciated.

What I have do so far;

1. Their is a command tester in Ham Radio Deluxe (HRD). I can see the commands being sent to the radio, but the return is error.

2. I can see output from the radios data port on my ocilloscope, but at about 1/4 the output from the computer.

3. I have a find port program that finds open and used com ports and it reports that com port 4 (the one I am using) is open.

4. I also have a com test program where I can see the received chars from the radio. When I change frequency on the radio I can see the activity. However the output is all"0".

5. And yes I did double check the instructions.

Any and all suggestions would be helpful.

Thanks,

Charlie W0TAX

The first I would do is to lower the Baud rate to 9600 or lower and see if that fixes the problem. It normally will.

Charlie, there's a specific code that has to be set for each type of
ICOM radio. It's possible to change the code on some rigs. According
to the book on the CI-V interface, the baud rate should be 1200 and
the code for the IC-735 is 04H. I could not find in the online versin
of the manual how to change the address on the radio itself. It's
possible that it may have been changed inadvertently?

Thank you for the advice, I did get the interface to work, I had to drop the baud rate down to 1200. I do not have a service manual for my IC-735 so I don't know what I need to do to change it. I understand that it will go from 300 to 9600 baud.

Anyway now I can start playing with the digital modes!

Hi, Bill, I'm not able to help much physically, either, at the moment. Are you looking for advice or labor? What kind of vehicle are we trying to tame?

I've often wanted to try to rent a lift from somebody so I could do all the bonding they recommend under the car. It seems that for many vehicles there are known cures for various noises - like Ford fuel pumps, which I hear are atrocious. www.k0bg.com is about the most comprehensive web site on mobile operation I've ever seen.

154. SWL Longwire Antenna Questions

Yahoo group: rochester_hams
Date: 2008-03-13 03:01:21 UTC
From: Alex J. Todd
Topic: 154 Message: 154

It's shortwave listening that got me interested in Ham radio in the first place, and I still enjoy it quite a bit.

I have a Par End-Fed Shortwave Listening (EF-SWL) antenna (http://www.universal-radio.com/catalog/sw_ant/2205.html) that until some recent tree removal, I had just thrown into a tree in my yard. At only about 15 feet off the ground, it still gave decent DX reception on my Grundig Satellit 800.

Questions I have:
1. What works better--fishing rod or slingshot--for getting a wire about 50 feet up in a tree? I don't have either right now.

2. Grounding: For both lightning suppression and "regular" grounding, what do you suggest? I have a 10' copper pipe ready to make into two grounding rods. For lightning I usually disconnect the coax from the radio and dangle it outside the window, but an I still gonna burn my house down having my lead-in coax hanging near the house?

Thanks for any suggestions you may have. They'll help me get in on some HF listening until I can upgrade to General!

73s,
Alex.

Alex

1. There are members of the club who have slingshot devices to help you get the wire up into a tree. Other receiving antenna options that you might consider include the K9ay loop and a simple 1/4 wave vertical - best for receiving the low angle dx signals.

2. Regarding grounding - just drive the 10 foot rod into the ground and attach a large piece of cooper wire to it from your radio's grounding plug. I suggest you also get an SO-239 coax receptacle and wire the single end of it to a piece of wire going to the ground rod. That way, you can unplug your coax from the radio and plug it into the ground rod when not in use.

Great to see you at the club meeting.

Thanks, Scott!

A little time on "the Google" last night revealed some hams in Germany using a tennis ball chucker to get an antenna into a tree. I might give that a try, since I have one of those.

Great idea about the SO-239. Should I solder, or merely attach the wires to the ground rod? I would think lightning would just melt solder?

Thanks again!

Topic: 154 Message: 158

I have bought a connector that screws onto the rod and the wire is attached via the screw also. Home Depot has it for example.

Best regards,

Scott

Thanks, Scott!

A little time on "the Google" last night revealed some hams in Germany using a tennis ball chucker to get an antenna into a tree. I might give that a try, since I have one of those.

Great idea about the SO-239. Should I solder, or merely attach the wires to the ground rod? I would think lightning would just melt solder?

Thanks again!
Alex, n0akz

I see that I was tardy with replying to a request for membership in the group. Welcome to Shannon - Shannon, are you aware that we have a Technican License Class coming up on April 26?

For that matter, it's time to start beating the drums. I already have quite a few signups for the class, but I'm afraid our rationale for moving it to after the SKYWARN class didn't work out very well - so far I haven't had anybody from the SKYWARN class contact me, in spite of the nice plug Todd put in for us during the class.

Thank you for approving me! One of my clients was telling me about the group and HAM is always something I have wanted to learn since I was a teenager(many moons ago). How can I sign up for the class? I hope that I am not too late.

Thank you!!!

Nope - we should have plenty of time. You need to register with
Community Education - the information on registering is here:
http://www.rochester.k12.mn.us/se3bin/clientgenie.cgi

The course code is 8335.231. You will need to pay $5 to Community Ed
and there is a $40 fee for the book and materials that we use in the
class. This year, I'm ordering the books in advance so students have
an opportunity to read it prior to the class. Let me know when you
have registered, and I will order a book for you.

168. 'Competition Grade' Gear

Yahoo group: rochester_hams
Date: 2008-04-23 22:37:05 UTC
From: k0rgr
Topic: 168 Message: 168

The RARC Field Day group is looking for more 'competition grade'
radios for the club's Field Day effort in June.

If you've got a rig with a receiver that will handle signals from a KW
next door, let us know. I'm told we've rounded up a few ICOM 756's,
are there others, perhaps some TenTec Omni's, Yaesu 2000's, or K2/K3
rigs out there? We're particularly looking for a rig with great
dynamic range for the digital station, since odds are that they will
need to coexist with a KW on the low end of the same band they're
operating on.

Another viable possibility would be a good tube rig with enough
frequency stability to work for digital stuff. Anybody got a TR-4 or
Drake Twins?

Thanks!

171. Digital Televsion Transition Channels

Yahoo group: rochester_hams
Date: 2008-04-24 19:53:47 UTC
From: investr1
Topic: 171 Message: 171

I recently purchased a Digital TV Converter Box and rapidly became aware that things are not as they seem. The current Digital Channels in Minnesota are all actually on UHF channels. For example, Channel 11 digital (11-2 and 11-2) are actually on UHF Channel 35. By February 17, 2009, some of the digital channels will stay where they are and others will move. For example, Channel 5 Digital is on UHF Channel 50 now but will move to UHF Channel 35. Channel 11 will move their digital broadcasts from UHF Channel 35 back to the current frequency for analog Channel 11.

How do I know all this? I talked to Richard Rice, Director of Engineering for KSTP and KSTC in Minneapolis. He was kind enough to share a powerpoint presentation that he recently gave to the National Cable & Telecommunications Association. The presentation shows the coverage areas, current channel, and future channel locations for TV stations in Minnesota. He also recommends www.fcc.gov/fcc-bin/audio/tvq.html for details about power levels, etc.

I have uploaded the presentation (with Richard's permission)to the files area of this group. You may find it helpful as you help friends and neighbors adjust from analog to the digital televison.

Interesting information, Rob. I see some good news for hams - no more channels 2 or 5 in Minnesota. That should help relieve TVI to some extent, although these days, TVI is usually front-end overload at the cable box.

We have had an HD set for a while here, and it is rather amazing. Using just a set of rabbit ears, I get the local HD stations, the stations in Austin, and several from Wisconsin. I get all the networks, including a bunch of different PBS channels. No sign of the Twin Cities stations. Living on a hill helps.

The pictures are better via direct broadcast than over cable, but the cable HD is pretty decent, too. I think the most impressive show on TV these days is CSI Miami via direct broadcast in HD.

Speaking of living on a hill, the ideal ham-house was on the market, and we missed getting a bid in by 3 days. 0.6 acres next to the water tower at the top of Country Club Manor. I hope it wasn't wasted on a non-ham. Nertz! From that house, you can look straight across to our

antenna for the .82 repeater - about the same level.

I'm not so sure you can count on channels 2 and 5 disappearing in Minnesota. My understanding is that the spectrum will be auctioned by the FCC so you may very well see a "New" Channel 2 or 5 coming onlne :-) or :-(depending on your point of view.

You brought up a good point .... no channel 2 - 6 full power stations in Minnesota after February 17, 2009. I did some more research and found a good article at http://www.hdtvexpert.com/pages_b/MusicalChairs.html
Only 43 of the roughly 1800 full power TV stations in the US will be using the VHF-LOW band after February 17th, 2009. It appears that impulse noise and DX propagation during the summer make these channels undesirable for Digital TV. So the VHF-LOW band will be occupied by a few full power stations and probably many Low Power TV analog stations. The ultimate future of the VHF-LOW band is uncertain.

This has some interesting ramifications for outdoor TV antennas in fringe areas. For most areas your outdoor antenna can consist of a UHF antenna (Channels 14-51) and a VHF-HIGH band antenna (174 - 216 Mhz). This means a VHF TV antenna with elements shorter than a 2 meter beam and higher gain than your existing VHF LOW/HIGH band TV antenna. The long elements for 54-88 Mhz will not be needed for mainstrean stations.

A few weeks ago I did some looking for DTV info. Found some good links.

The History and Politics behind its development. Interesting reading
- http://www.8vsb.com/history/HDTV.pdf

One of the better articles describing the encoding, and broadcasting
of the signal - http://download.harris.com/app/public_download.asp?fid=505

A real good site is http://www.tvfool.com Here you put in your
address and it gives you Call sign, Real and Virtual Channels, Signal
sinfo, and distance and azmith to local transmitters. You can get
either current or post DTV transition data. The ouput is a bit of an
eyecheck, but you can save the file. The file is a PNG image and can
be printed with mspaint. You can also get some neat coverage maps here.

A similar site to tvfool is http://www.antennaweb.org

Also as Rob has found http://www.hdtvexpert.com/ has a lot of info.

Thanks for the great links Ron. I especially like the
http://www.tvfool.com link because it gives transmitter power and
more importantly, estimated signal levels at your location.

Rob

Well, I think I've come to the conclusion that EchoLink is going to be down until I relocate. As you know, we've been trying to sell the house, and that means I have to hide a lot of ugly. Now that Field Day is over, a lot more radio gear is going to move to the storage shed, along with the computer that runs EchoLink. I think I'll keep the IC7000 and my laptop here.

If anyone else has a high speed Internet connection and wants to set it up, I'm willing to give you the hardware. If you have one of the newer Kenwood transceivers, you already have the hardware, because the EchoLink interface is built in.

Update on Joe,

Just got an email from Joe, he is in Leavenworth, Kansas, not
Kentucky. Sorry for the mixup. I don't know how much longer he will be
there before they move him again, but he left the following snail mail
address and phone number:

KKLO
C/O Joe Galloway
481 Muncie road
Leavenworth KS 66048-4947

Phone (913) 727-1410

> Paul would like to borrow a 2 mtr ht/rig so that he can use the local

By the way, if you punch in the room number at the recording and get
no answer, it will ring to the person on duty, which just might be me.

Thank you ahead of time, whomever responds.

Paul, WD0GCP

197. RARC Spring Class

Yahoo group: rochester_hams
Date: 2008-08-11 15:25:20 UTC
From: k0rgr
Topic: 197 Message: 197

I just got the notice from Community Ed to remind me to get the info posted for our radio class in the spring. Before arbitrarily picking a date, I thought I'd ask the group for their opinion.

Our last class went rather well. The idea was to hold the class after the Skywarn training, in order to allow us to advertise it at the Skywarn class. Well, the advertising part went well, but I don't think we actually recruited any students that way - though several of them said they heard Todd Shay's announcement on the weather radio.

Another question is where to hold this class. I assume we're welcome at the Red Cross, still, and that's a good central location. Or, should we consider other locations?

We do not have a class scheduled for fall - partly because the original idea was to have one at the Expo and that fell through. We've got the class down to a 1-day event now, though I'd like to make it a bit longer again. Instead of a 1-day affair, I've thought about splitting it into two 5-hour sessions, and putting all the demos and guest lectures back in like we used to do. I had even thought about doing the two 5-hour sessions in the evening, to avoid conflicts with kids' sports activities in the daytime.

As far as classes at other times, I'm willing to do a class any time we get 3 or more students committed to it, and can find a place to do it.

So, let me know what you think...

200. Re: [rochester_hams] RARC Spring Class - but how do we encourage new hams to operate?

Yahoo group: rochester_hams
Date: 2008-08-13 17:41:06 UTC
From: Dave or Carol Naatz
Topic: 200 Message: 200

Bill I support your ideas however they materialize, ie, even 1 or 2 evenings or weekend days next April for a change of pace after skywarn training and perhaps change the 2Q testing weekend way ahead of time and also do it at the Red Cross.

But a concern I have had for years is what do we do to elmer and try to get those that passed -active- on the air and in RARC? Do we have email adrs from this past April's class or the year before to give these new hams personal invites to attend the Sept or Oct RARC RCTC meetings and perhaps in conjunction with that have a special new hams program geared towards basic operating 2m FM or 10m SSB skills? It would be great to tie that into Century HS club station status from those involved as well. Just some thoughts, we gotta get everyone over microphone fright, maybe even offer them some assigned mentors like we do at IBM for new hires (elmers).

We've got the class down to a 1-day event now, though I'd like to make it a bit longer again. Instead of a 1-day affair, I've thought about splitting it into two 5-hour sessions, and putting all the demos and guest lectures back in like we used to do. I had even thought about doing the two 5-hour sessions in the evening, to avoid conflicts with kids' sports activities in the daytime.

As far as classes at other times, I'm willing to do a class any time we get 3 or more students committed to it, and can find a place to do it.

So, let me know what you think...

Bill,

I heartily echo Dave's comments regarding some sort of elmering program for newly licensed or inactive hams. It's easy for one's enthusiasm to wane in the absence of someone to answer the questions that inevitably pop up. I could certainly benefit from such a program, even though I have made a few awkward QSOs; I've made quite a few gaffes at the same time. Perhaps there could be a refresher course for those of us who barely squeaked through the Technician exam, and that, some time ago.

Also, has there been any interest expressed in a General License class? I for one would be interested in one, and I suspect an elmering program would increase the numbers, especially with the number of recent licensees in the area. I would think the prospect of working HF phone would be appealing to a lot of those folks.

Subject: [rochester_hams] RARC Spring Class

I just got the notice from Community Ed to remind me to get the info

posted for our radio class in the spring. Before arbitrarily picking a

date, I thought I'd ask the group for their opinion.

Our last class went rather well. The idea was to hold the class after

the Skywarn training, in order to allow us to advertise it at the

Skywarn class. Well, the advertising part went well, but I don't think

we actually recruited any students that way - though several of them

said they heard Todd Shay's announcement on the weather radio.

Another question is where to hold this class. I assume we're welcome

at the Red Cross, still, and that's a good central location. Or,

should we consider other locations?

We do not have a class scheduled for fall - partly because the

original idea was to have one at the Expo and that fell through. We've

got the class down to a 1-day event now, though I'd like to make it a

bit longer again. Instead of a 1-day affair, I've thought about

splitting it into two 5-hour sessions, and putting all the demos and

guest lectures back in like we used to do. I had even thought about

doing the two 5-hour sessions in the evening, to avoid conflicts with

kids' sports activities in the daytime.

As far as classes at other times, I'm willing to do a class any time

we get 3 or more students committed to it, and can find a place to do it.

So, let me know what you think...

Topic: 197 Message: 202

Hello all,

Being someone that just took that spring class, I have a few thoughts to offer. First of all... have a Skywarn class after the spring class or testing. It would give the new hams a little something to hold on to and look forward to. At least when they get their first radio (seems common that most got a HT)... they can listen in until they got the money saved up for their first mobile. I would agree that moving the class to a 2 session with guest speakers and hands on is great.
I also had a discussion with Mel kc0p about "getting the most out of your technician" or "the most out of VHF and UHF. Simple antennas, back up power projects, digital, fox hunt, etc... but that would be something more for an elmer or maybe an elmer class. BTW... thank you to all of you for your little hints, suggestions, and so on. You are all great elmers.

Thanks for the input, folks.

I've had several suggestions for where to hold the class. Brad, AI0BP is now doing classes at the Mason's facility on a quarterly basis. He's boiled the material down to an even shorter class than I have. Schaeffer Academy also sounds good, if we could recruit some kids from there it would be great. However, my work reality is that it's hard for me to guarantee any weekend off, two in a row would be unusual, and three in a row, not likely. I would like to break it into two sessions, though, just because I don't think the current class is providing much in the way of 'Elmering'.

Maybe what we could do would be to have the first session be a short one - an introduction to ham radio, pass out the books and study materials, demos, etc., and then make the second class the one where we cover the lessons in the book. We could open up the first session to any newly-licensed ham who wants to see it. I think getting the book to the students in time for them to read it prior to class was a big help this time.

204. New Repeater in Windom

Yahoo group: rochester_hams

From: Rod
Topic: 204 Message: 204

Guys, we have some great news we moved the Worthington Repeater which is 146.67 to a 280 ft. on a commercial tower by I-90 at Rushmore Mn. and changed the pl tone to 141.3 to be similar to the other repeaters in the southwest part of the state. We now have a new repeater in Windom located at 300 ft on highway 60-71 at a frequency of 147.225 with pl tone of 141.3 and it puts out 90 watts, and we are getting great coverage.

Topic: 204 Message: 205

Hi Everyone...

The 146.82 repeater is Rochester is down for repairs and will be off
the air until they are completed.
The main repeater is currently at the repair shop being fixed from
the receive problem that was bothering us this summer.
The backup repeater, which is the old 146.82 repeater that we
replaced because it was starting to fail, has finally failed.

From: W0VLZ
Topic: 207 Message: 207

Is anyone interested in forming up a RARC group to do HF QRP/low power operating?

See http://www.youtube.com/watch?v=BUeJOuu5oUE . SSB and digital modes are also possible, not just CW.

We could spend the winter looking at equipment and putting together stations including antennas and power. Some may want to build a rig. Next spring and summer we could have a few outings to try out what we have.

Nice K1 :-)

New ham here. Passed Element 2 last week, and am refreshing the ULS
periodically until I see my call :)

I'm incredibly interested in QRP (esp. SSB mode). Even if I can't
operate in HF (at least for a short while), I'd be interested in the
discussions, etc. while I prep for Element 3.

Thanks!

Been there, done that. :-) I've only had my license for a little over a month. The day my call appeared on the ULS, I got on the air w/my VX-7R - I kept reversing the last two letters of my call.
The very next day, I applied for a 1x3 vanity call that was easy to remember/reflected my first name :-) Interestingly, my vanity call took almost 3 weeks to receive.

I went all the way up to Radio City in Mounds View with my son for my VX-7R and its accessories. Nice to go into a well-stocked store if you don't mind the long drive. Lots of good books and used gear there, too.

I programmed my VX-7R in the parking lot of the store with all the repeaters for the trip home (STPRC, TCRC, SEMARC, Hampton, RARC, etc.).

> with a rubber duck antenna?

I run my VX-7R HT in med. power mode (2 watts I think) and hit the RARC 2 meter and 70 cm repeaters no problem from my home in Byron - with both the stock rubber duck, and a Diamond SRH815. I'm in bit of an elevated section of town here, and can actually see the FAA beacons of the W0MXW (82) repeater tower from my house :-)

The other night I was rag chewing with N0GMY and W0TMP from Zumbrota and Byron on the HT in the vehicle (full 5W).

Hopefully we'll get to chat soon when you get your mobile setup (I still need to do that).

From: kd0gah
Topic: 235 Message: 235

Hey all -

If anyone has a 2m antenna they want to part with let me know.

Just trying to get something hooked up to a Yaesu 2800 I have coming my way.

Thanks,
Chris (KD0GAH)

Chris, where is your sense of adventure--make one make a diapole in fact hang it vert. from a tree use this link, you may have to type it in though. http://www.qsl.net/ylradio/dipole.html

I have made several for emergencys only I made them half wave instead of 1/4 wave, you can roll them up. Rod kc0yla in Windom Mn

I'll need a lot of wire to make it from Dodge Center to Rochester :)

I should have been more specific, I'm looking for a mobile antenna.

Great link though, going to look again now.

238. Vanity Call Sign Status - Normal?

Yahoo group: rochester_hams
Date: 2008-12-23 17:53:46 UTC
From: kd0gah
Topic: 238 Message: 238

For those who applied online, is the following status message normal?

"Requires examiner intervention, fee payments, or other action before
a decision on the application may be reached."

I applied for any one of the following:

N0YZE
K0WTF
N0THN
K0CRM
K0FTW

Did you pay the 13-ish dollar vanity app fee online with a CC?

Haven't seen that one before. *However*, I do know that some states
audit vanity /plate/ applications for perceived foul language...e.g.:
I've seen states where WTF, STFU, etc. is not available on plates
because the acronyms are pretty much "common knowledge." Could be the
same issue here (red flag)?

Nice!

HeadBlader myself (most days), every now and then I'll use my '48 Gillette or another vintage razor.

My first choice was N0YZE so unless it wasn't available I'm not sure why it would have gone to the next in line... Oh well, I'm used to not quite conforming so we'll see what happens.

By the way... I figured WTF would be easy since I know the phonetics lol.

I like the current logo at www.rarchams.org. It is less VHF centric and more inclusive for the entire ham (HF and VHF) community with its multipurpose antenna design.

The single best source for electronic components is Digi-Key via the Internet (http://digikey.com). They're a Minnesota-based company, and can usually ship via UPS the same day. Most of my orders arrive on my doorstep the following afternoon.

I haven't personally visited them, yet, but there are some surplus
stores in the Twin Cities that I'm told are worth the visit. If Brad,
AI0BP is around, he can provide useful details.

And, of course, we have the Ham Radio store on south Broadway down
near Brothers.

Thanks for the response, folks. Sitting on my electronics bench, I happen to have a big, fat Digi-Key catalog (they still print these monsters...yay!). Looks like I'll have to do the mail/internet order thing. Thought there was a store of sorts locally I could walk into, like the good old days. :-)

Two things I miss dearly: Electronics/radio shops, and print catalogs to flip through and "dog ear". Everything seems to be 'net-based now...somewhat of a pain to adjust to. Kind of odd coming from a 16-year IT veteran/internet specialist. ;-)

Hope everyone's New Years was fun and safe. Anyone do anything nerdy? I spent Jan 1 constructing a new "lab", and moving my it from the (dusty) shop upstairs to a newly-constructed area downstairs: <http://links.cuccio.us/otmmp>

262. 10m mobile rigs?

Yahoo group: rochester_hams
Date: 2009-01-08 15:35:49 UTC
From: Chip Cuccio
Topic: 262 Message: 262

Howdy folks.

I'd like to put a 10m mobile rig in my vehicle. Anyone have any suggestions/reviews?

The only ones I see available are an el-cheapo by Alinco (display looks kind of funky), a couple of expensive multi-band units (include 6 & 2m, etc.), and these really cheesy "channelized" rigs that resemble the old export-type CB radios.

Whatever happened to the HR2510, etc.? What are the other RARC members using as 10m mobiles?

I guess the multi-band units are compelling...being able to use 10/2m and 23cm in one unit, but I'm afraid the "CFO"/XYL may find them too pricey. ;)

Chip,
Ten meters is not open much these days. I find little activity there even during active contests.

I have an Icom 7000 that I use HF mobile but mostly on 20 and 40 meters. There are several other hams in the club who use them. There are a number of great possible rigs you could use including the Icom 7000 and 706 mk2g , the Yaesu fT 450 and 857 or 897 rigs, the kenwood ts 480 or the old TS 50. I think the Alinco rigs have a great reputation and lots of hams use them. I have not used a converted CB rig on 10 meters since 1978. But there is no reason why one would not work. It is equally important to select a great antenna and lots of club members have them to show you as an example. I hope you find activity on 10 meters but propagation charts suggest it may be 2 or 3 years before it returns to be open regularly unless we hit a Maunder minimum which went 40 years about 100 years ago.

Best regards
Scott K0MD

Hey, Chip, when 10 meters is open, a single-band rig can be lots of fun, but right now, I think it would be lots of boredom. 10 opens up for Eskip occasionally, but that's about it. I suspect the winter Eskip season is about over, and it will be pretty rare until about mid-May, when 10 will start opening again for a couple months. With low power, you can expect to work people about 1200 miles away - we usually have a 'pipeline' into Texas from here.

There are other rigs to consider, and Scott ran several of them by you. That FT-857 is very popular around here, and I, too, have an IC-7000. I also have another rig I like very much - the FT-817. It's a low power portable rig that covers all the popular ham bands. A Technician Class could use it on 10 and 6 meters SSB, as well as on 6, 2, anf UHF FM. The Tech could also use it for CW on the HF bands, if he wanted to.

5 watts can be a little frustrating, particularly for newcomers on HF, but when 10 or 6 are open, 5 watts is plenty to make lots of contacts. You can buy a kit to build an HF amplifier that will take it up to 35 watts for less than $150. There are dual-hand amplifiers you could use

with it in the car for 2 meters and UHF for under $100 I think. Unlike most HT's, it makes a good mobile rig because it has a big speaker, plenty of audio on receive, and a hand mike. Be sure to get the mike with the touchtone pad, though - it doesn't come standard. Of course, you can use the supplied antenna on 6, 2, and UHF, and it makes a great replacement for an HT.

Did I mention SSB on 6, 2, and UHF as a Tech? There ought to be a big VHF contest coming up soon.

AES has a used FT-817ND with case listed for $505. I believe you can trust any used rig from AES - they check them out throughly and repair anything they find wrong.

Chip

I second Bill's recommendation to get a good used rig from a credible dealer.

I trade a lot with Burghardt's (www.burghardt-amateur.com) and they certify all used radios.

They have a nice Yaesu FT 900 which is an older but superb mobile rig for ~ 500 as well. It has a built in antenna tuner, an important feature to consider.

When buying a rig for mobile, you will need:

radio
antenna
tuner
coax
grounding cable
power cable
microphone/headphone or external speaker

I have used a variety of antennas but I like the hamsticks - 30 to 40/antenna and easy to switch in and out.

Hey, Chip, when 10 meters is open, a single-band rig can be lots of fun, but right now, I think it would be lots of boredom. 10 opens up for Eskip occasionally, but that's about it. I suspect the winter Eskip season is about over, and it will be pretty rare until about mid-May, when 10 will start opening again for a couple months. With low power, you can expect to work people about 1200 miles away - we usually have a 'pipeline' into Texas from here.

There are other rigs to consider, and Scott ran several of them by you. That FT-857 is very popular around here, and I, too, have an IC-7000. I also have another rig I like very much - the FT-817. It's a low power portable rig that covers all the popular ham bands. A Technician Class could use it on 10 and 6 meters SSB, as well as on 6, 2, anf UHF FM. The Tech could also use it for CW on the HF bands, if he wanted to.

5 watts can be a little frustrating, particularly for newcomers on HF, but when 10 or 6 are open, 5 watts is plenty to make lots of contacts. You can buy a kit to build an HF amplifier that will take it up to 35 watts for less than $150. There are dual-hand amplifiers you could use with it in the car for 2 meters and UHF for under $100 I think. Unlike most HT's, it makes a good mobile rig because it has a big speaker, plenty of audio on receive, and a hand mike. Be sure to get the mike with the touchtone pad, though - it doesn't come standard. Of course, you can use the supplied antenna on 6, 2, and UHF, and it makes a great replacement for an HT.

Did I mention SSB on 6, 2, and UHF as a Tech? There ought to be a big VHF contest coming up soon.

AES has a used FT-817ND with case listed for $505. I believe you can trust any used rig from AES - they check them out throughly and repair anything they find wrong.

Very creative :) Now you need a gmail addy to match.

We hams only pay a measly $10 for the vanity plates. I filled out the
app - still need to mail it though :(

You going to meet us for brekky on Sat. AM, N0YZE?

Do we also have to pay the $100 one time initial fee or is it $10 total?
Anyone know? I tried calling but their lines were messed up today.

Just the $10. They give us a break because of the public service work we do. Actually I thought it was $13, and they probably have raised but but what ever it is it's a heck of a lot cheaper than the regular vanity plates.

If I remember correctly. You pay your normal plate fee plus the $13 for the vanity plate and that's it. The $13 may have gone up a little but that;s the last price I rememeber.

I just got into geocaching last fall, thanks to my Boy Scout son, and am on geocaching.com as KB0GT. I'm lovin' it so far, even though I don't have all that many finds, yet. I know that KG0AC does quite a lot of geocaching. And, I think that K0RPD (my college roommate a couple decades back) has done it, but I don't think he's done it much.

I intend to start carrying my HT while geocaching once I get a functional antenna for it. (The VX7R antenna doesn't take kindly to getting bent over hard.) I even read-up on the wilderness protocol in the ARRL repeater directory. I want to go into the woods with multiple communications capabilities (cell phone and HT) to avoid becoming a really large cache at a mystery location if I injure myself and can't get out on my own. (Thank you KG0AC for that humorous mental image.)

For anyone interested in checking out geocaching, I've bookmarked a few usefile web sites at: http://delicious.com/KB0GT/geocaching

Haha. That's hilarious!

I also have a VX-7R (love it), and agreed...the stock antenna takes a
set quite easily. It's really stiff, which made me worry about the
stress on the connector. I've since replaced it with a really nice,
flexible Diamond SRH519: <http://www.rfparts.com/diamond/srh519.html>

I sold my legacy Garmin mapping GPS in order to apply to proceeds to the
newer Garmin Oregon 400t. $200 more to go! As of now, I'm using only
my iPhone w/GPSkit and the Geocaching iPhone app. Usable, but not like
a full-size/functionality GPS.

Cool. I'm jazzed that we have some geocaching hams here :)

Yahoo group: rochester_hams
Date: 2009-02-11 18:57:43 UTC
From: n0yze71
Topic: 291 Message: 291

It was brought up in last night's meeting, and being a new recruit I thought it was a great idea.

I can see how easy it could be for those that have been involved in this hobby for quite some time to easily forget how intimidating it can be at times.

The idea of having a list of available Elmers when someone passes their exam is great. I think the benefits are two-fold.

1. The newly licensed amateur will be more involved.
2. The newly licensed amateur will be more likely to join the club.

A great way to approach this would be to ask for a contact number and/or an email address and that would be handed off to an available Elmer, who would in turn contact the person and take them under their wing.

Another thought would be to have the new operator select one or more things they are interested in to help pair them up with someone who does similar things.

Just some random thoughts I had on my drive home last night.

Was nice meeting the folks who showed up at the meeting, thanks for having me.

292. Club Decals and Other Misc Ideas

Yahoo group: rochester_hams

From: n0yze71
Topic: 292 Message: 292

Hey all...

Was thinking again and I have a vinyl cutter sitting in my basement doing nothing at the moment.

1. Do we have decals we can buy?
2. If not, is there any interest?

I might be willing to make them for the cost of materials and even design them (the simpler the better). I think it would be great free advertising if members had them on their vehicles.

It would be more time consuming, but it could also be an option to have your call sign on the decal.

My thought was to have the call sign across the top and the web address below it. Short, sweet, easy to read.

We should also work on some banner ads to get the word out... again, I'd be willing to do this. I have a degree in graphic design and would love to get some use out of it :)

I don't recall if we're using them, but Google has a decent program for targeted ad revenue as well (ads on the clubs site).

On the weekends I have a couple of scanners that monitor Mayo One,
Olmsted Cty./Roch. gov't/emerg. freqs. I also scan local repeaters with
my HT.

Work days and eves, I monitor various Twin City repeaters, as well as the RARC
ones with my scanning HT.

To marry my passion for technology with my passion for auto sports, I
bring my RACEceiver TruScan Elite[1] to Deer Creek Speedway every Sat.
during the racing season and monitor the race radio comms.
Unfortunately, Dodge County Speedway in Kasson doesn't use radio comms.,
only transponders :(

Hey all...

Was thinking again and I have a vinyl cutter sitting in my basement doing nothing at the moment.

1. Do we have decals we can buy?
2. If not, is there any interest?

I might be willing to make them for the cost of materials and even design them (the simpler the better). I think it would be great free advertising if members had them on their vehicles.

It would be more time consuming, but it could also be an option to have your call sign on the decal.

My thought was to have the call sign across the top and the web address below it. Short, sweet, easy to read.

We should also work on some banner ads to get the word out... again, I'd be willing to do this. I have a degree in graphic design and would love to get some use out of it :)

I don't recall if we're using them, but Google has a decent program for targeted ad revenue as well (ads on the clubs site).

Lennie

Please join us at the Rochester amateur radio club meetings. The group is nice collection of hams with a strong interest in public service. There are a few old timers like me who are licensed > 30 years but not many.

The club website has all of the information.

www.rarchams.org

There are a lot of extra class hams like you, many of whom do VHF and some like me who do almost exclusively HF.

We have a ham convention coming July 18 - www.w0dxcc.com

I hope to see you at a meeting.

Best regards,

Scott Wright, K0MD

From: luthsurgitech
Topic: 291 Message: 300

I am all for the idea of the elmer being more active. We keep on having the discussions of a kit night. Why don't we have a a special open night right after the class/testing coming up. This would be an opportunity to make different types of projects, especially geared towards first time hams. Some of us do not have a lot of electronic background so wiring our mobile into our vehicle or making a battery box with power poles is a foreign concept. Also what kind of gear to get. Those are just some initial thoughts.

Well, I don't see where we made it into the Community Ed flyer this time around again. I also don't understand it, as I verified with them that it would be there this year. I was in direct contact with the lady when she was putting the flyer together, so I really don't get it this time!

Since we get most of our students through Community Ed, I have some doubts about this upcoming class in April. I have one person, so far, who intends to be there. I'll do it with as little as 5, but that's disappointing.

IF you know anybody who's interested, please let them know!

From: k0rgr
Topic: 304 Message: 304

Well, it would be great if we had so many people wanting to take the class that we could be selective in who we take. But, then, who do we take and who do we not? Personally, I would hope that everybody taking the class would have a personal interest in radio, not just looking for a way to get access to 2 meters. But that would eliminate most of our candidates.

To be honest, I think the best thing the club could do for newbies would be to build a club station someplace that RARC members could access at their convenience. Of course, they can get on 2 meters anytime they want via EchoLink, but a club station would provide a comfortable place where newbies and OT's could get on the air together.

Bill

I think it would be great for the club to organize an HF station. We have a rig and could easily come up with a dipole for 80 meters and a vertical for 10-40.

It could also have "regular hours" for newbies to come by to watch someone operate or to operate with someone to help them.

From: k0rgr
Topic: 306 Message: 306

The big trick, Scott, would be finding a location.

In ancient times, every Red Cross office, it seemed, gave the local ham club(s) a place for a station. Both of the radio clubs I belonged to in Silicon Valley had wonderful ham stations in the Red Cross buildings in their cities. The ham club members all had keys to the club stations.
The club I was most deeply involved with had Collins gear, a small tower and some horizontal antennas. The big club downtown had an S-Line, RTTY gear, a huge tower and several big yagis. Sadly, those days are history now.

I've heard several ideas for a club station over the years. The golden solution would be to find an organization with space that would benefit from having us around, and would not mind us being there. The whole point of having a club station is for it to be a place where hams can hang out and do radio.

I think the college might be a good place. We could possibly work a deal to get access to the facility - it is open most of the time anyway.

The golden days were those you described but we can have our own 21st century version!

309. KW Linear Amp for sale

Yahoo group: rochester_hams
Date: 2009-02-18 23:16:38 UTC
From: W0VLZ
Topic: 309 Message: 309

I'm helping sell some radio equipment from a SK. For sale is a mid 60s vintage Radio Industries "Loudenboomer". Hallicrafters took over this amp, made some cosmetic changes to match the HT-44 and SX-117, and called it the HT-45 This is a dip and load design for SSB, CW and AM. See http://www.io.com/~nielw/Loudenboomer/ for pictures/information and http://www.eham.net/reviews/detail/2998 for comments.

I checked it and given 50 watts in it puts out about 500 watts. Appears to work fine. Comes with a spare (untested) 3-400Z and power supply. Asking $200.

This should be bought as a project radio with expectations that it will need some amount of care. It is touchier than most modern linears. State of the art has shifted in 40 years.

Niel

310. Took a drive today...

Yahoo group: rochester_hams
Date: 2009-02-20 22:04:34 UTC
From: n0yze71
Topic: 310 Message: 310

Went to go pick up a new camera (Nikon D80) and of course had the radio on the whole time. I was able to hit the Red Wing repeater from Eagan, I think that is awesome... The guy I was talking to said it's only about 100' from the ground and the range isn't that great either.

Also hit the Albert Lea or Austin (can't remember) repeater from the MPLS airport area on 494.

As far as the clubs repeaters, I was reaching those up until just south of Cannon Falls I think it was.

This is a world of difference from my 5w handheld :)

Anyway, just thought I'd share. I do want to start carrying a pencil and paper so I can jot down who I'm talking to.

It's all a learning experience, but it was pretty fun and made the trip go that much faster too.

317. Two Meter Activity

Yahoo group: rochester_hams
Date: 2009-02-25 22:33:10 UTC
From: k0rgr
Topic: 317 Message: 317

Two meter activity is up and down around here. I was actually pleased to hear quite a bit last week. I need to get in the habit of turning the rig on when I'm sitting here. I still don't have any outside antennas, so I am a bit handicapped.

It seemed like we had more activity when we only had two repeaters in the area. Everybody listened on .82. Once we got a third, I think people ended up split.

When I turn it on, I usually scan all the local repeaters, 146.52, and the satellite and ISS downlinks. EchoLink should make things more interesting.

Another new place to listen is on the APRS frequency - 144.39. They are encouraging people to use 'voice alert', which is simply putting a tone squelch on that channel with a 100 Hz. tone. If somebody comes up with an APRS beacon sending a 100 Hz. tone, it will break the squelch, and you know somebody is in simplex range on 144.39. The Kenwood TMD700 and 710 have the unique ability to copy packets with the tone squelch on.

The cost of the class is $40 - $20 without the book. They need to
contact me at least 2 weeks before the class - the earlier the better
- because I need to order and distribute the books in time for people
to read them ahead of class. The class is at the Red Cross building in
Rochester.

The next exam date is May 7, which gives everybody some time to study
after the class.

In conjunction with the Olmsted EM-50 communications van There is a portable communications station that can communicate on Amateur radio VHF/UHF bands with voice, aprs and digital modes running simultaneously. Covers FRS, CB, Aviation, and Marine bands. Has 72 amps of DC power with battery back up. The picture is attached

I'm working on a project that needs a flat sheet of aluminum around 18 gauge (.04") and 10" x 17". The stuff at Menards is too thin. Any suggestions for aluminum suppliers in the area?

73,
Niel - W0VLZ

Not exactly local, but have you tried McNeilus Steel in Dodge center?
http://www.mcneilus.com/products.html It's about 20 miles west on Hwy
14.

331. 100 years of ham radio anniversary Mar 18?

Yahoo group: rochester_hams
Date: 2009-03-19 17:17:35 UTC
From: Dave Naatz
Topic: 331 Message: 331

For those who read the Post Bulletin, my wife actually spotted this item last night in the ON THIS DATE corner:

On March 18,1909, Einar Dessau of Denmark used a shortwave
transmitter to converse with a government radio post about
six miles away in what's believed to have been the first broadcast
by a "ham" operator.

I googled Einar Dessau and there are various other references out there but no details, so it may be true or may be a myth.
I doubt if the Danes called it "ham" radio.

I agree, we need more people at least monitoring 82 or 625 during both morning and evening drive times. I'd be glad to talk to you but I am usually on the road for 15 minutes between 730-8am or 5-530pm M-F.
I have talked to Bob KC0GND three times in the past week so kudos there but have not heard anyone else on. I am not on a lot but always listen especially during the 8 months when I don't need to wear heavy gloves.

If Bill K0RGR is reading, he did a great 2m "contest" a few years back. I'd recommend RARC sponsors it again later this summer after Field Day and the July18 DX convention is done. Perhaps shorter, like 6 weeks, informally log your QSOs on 82 or 625 and give certificates to the top 5, perhaps even top score gets a free dinner at Hardys BBQ or something. Bill I am sure remembers what worked and what did not from a few years ago.

Nice idea there, I wasn't around then but it might be what we need to kick start some activity. Just getting my license around December or so it's tough to get 'comfortable' with the radio if all I'm doing is talking to myself. Luckily I'm persistent (or bored), but I could see other new hams being somewhat disappointed and never really get into it if there's nothing going on.

Well, Heck. I'm on at 6:00 am to about 6:15am. Usually all by myself.

341. ASE fest Milwaukee

Yahoo group: rochester_hams
Date: 2009-03-26 18:20:53 UTC
From: steve wiebke
Topic: 341 Message: 341

Dave Thompson and I are taking his private plane down to the ASE-fest in Milwaukee April 4th for the day. We leave at 5:45 AM that Saturday from the Rochester general aviation terminal to get there by 8:30 for the doors to open and to see the first semmiar. The cost is $65.00 with 4 people round trip, payable that morning. It would cost that much to drive down and back by car. The hamfest is free. There are two seats available on a first come, first serve basis for anyone that is sure he/she can go that day. We plan to work APRS and simplex frequencies on our way down and back.

Check out the AES Milwaukee web site for program and show specials. Call 288-6305 for more information. To avoid confusion on booking your seat, registering will be by reply e-mail to time stamp the request for a seat.

The show ends at 3:00 PM we should be back in Rochester by 5:30 PM.

Steve/ W0STV

342. AES fest

Yahoo group: rochester_hams
Date: 2009-03-27 12:54:23 UTC
From: steve wiebke
Topic: 342 Message: 342

Here is the information requested:

The plane is a Cessna 177R it is a high wing with no wing strut. There is 12 volt power on board to operate a low power HF system. They have operated 2 meter from the plane before.

Dave the pilot will be in the left seat.

Steve will bring a hand held APRS radio/gps system for the trip to message while in the air

Let me know ASAP who is for sure going.

Yes, I intend to do the class, even though we didn't get in the Community Ed brochure AGAIN this year. Counting the three mentioned here, I think I have 4 or 5 others, so it sounds like we will have a decent sized class.

I could use help with the class once again. I'm going to start getting things pulled together, copies made, etc., this weekend, so I will let you know what it looks like at that point.

We should have a good group for the class. Hopefully, we'll recruit a few more along the way.

The General Class material I have hasn't been updated since the General test syllabus changed. A rewrite would be a major undertaking.

However, if there is enough interest in an informal class, I could see getting together and reviewing the ARRL General License Manual. I'd rather do that like a group study session, though, rather than trying to condense everything into a one-day class like we do for the Tech license.

For that matter, we could probably do the same kind of thing for Extra Class.

Maybe we could find a place to meet one evening a week for 5-6 weeks? I'd be happy to order books for club members, since the club gets a small discount on them from ARRL.

OK, we're getting set for the class this Saturday.

Who has the club's projector? I'll need to get this before Saturday, and a backup would be nice. I'm going to do paper handouts this time - I think it works better with them, and they are another backup if we have projector problems.

I should have a few extra books on hand, too. If anybody knows somebody who should be in the class, I think we can probably handle them.

My son, KC0LLG is going to be helping me most of the day. We have people to open the room for us all set up.

OK, we're getting set for the class this Saturday.

Who has the club's projector? I'll need to get this before Saturday, and a backup would be nice. I'm going to do paper handouts this time - I think it works better with them, and they are another backup if we have projector problems.

I should have a few extra books on hand, too. If anybody knows somebody who should be in the class, I think we can probably handle them.

My son, KC0LLG is going to be helping me most of the day. We have people to open the room for us all set up.

360. Power Stations

Yahoo group: rochester_hams
Date: 2009-04-24 14:37:22 UTC
From: luthsurgitech
Topic: 360 Message: 360

I am looking for information and recommendtions for my moble rig. My goal is to avoid wiring my mobile rig actually in my car. So I would like to power it with a battery in a box or a power station. Eventually I would need a little assistance/guidance in putting it all together.

My biggest questions are;

1: What is a grocery list of all the things I need I need? (I have the radio FT-7800 and antenna) just getting the power and the power to the radio correcly.
2: How much power would a need to operate during the day (during a public service event/skywarn deployment) (forgot how to apply all those fomulas) Black and Decker has a portable power station (400 watts) or Duracell has a portable power station (600 watts).

The "portable power stations" are generally a 12-volt battery and an inverter put into a plastic case. The "400 watts" or "600 watts" refer to the power-handling capacity of the inverter, which converts from the 12 volt DC battery to 120 volt AC. But your radio takes DC, so the inverter is irrelevant. What matters is the capacity of the battery, usually measured in amp-hours.

I've run my 50 watt 2 meter rig off of a separate battery in my car, like you want to. The problems I've run into are mostly that transmitting at 50 watts drains even a fairly large battery surprisingly quickly (a couple of hours, not talking very much). If you can get by on 20 or even 10 watts, you can go much longer. The larger the battery, the better. A minimum would be a 17 amp-hour battery -- some of the power stations are smaller than this.

Another problem you may find is that some rigs don't work well when the voltage drops below 12 volts. A fully-charged 12 volt lead-acid battery is only about 12.5 to 13.0 volts, and it drops below 12 long before it's "empty". So, the amp-hour rating needs to be read conservatively, depending on your rig.

The power cord from the battery to the rig should have a fuse. Other than that, just plug it in. I put everything in the front passenger seat or on the floor. It works.

Are you looking avoid wiring to the car battery, or do you just want to keep things so it is easy to move the radio from the car to the shack and visa-versa? If you are simply looking for an easy connect solution, you may wish to look at anderson power poles and possibly a rig-runner:
http://www.westmountainradio.com/RIGrunner.htm

I'm doing this with both of my mobiles, and in the shack -- it works really,really well. Easy connection works for the power source on the rig runner as well: I have 3 90 amp hour gel cell batteries backing up my astron (http://www.astroncorp.com/catalog.asp).

If you are worried about getting the wires from the battery to the cab, you can talk to your car dealer service center about doing it. I know some will do it for you...

Good luck.

I want to echo Brad's recommendations fully.

Also, I run my HF mobile rig from the car battery/voltage management center. I had it wired from a local service center - Virgil's -and they do a FB job with the wiring, routing of the coax and strapping a ground braid onto the frame.

It will be a chore to re-charge the auxillary battery without removing it from the car frequently.

Hi Rodney - for short term use, a cigarette lighter plug is usually OK, but you run the slight risk of getting RF back into the car's electronics if you run your radio from the car's wiring. I generally put a 'split ferrite' RF choke on the power lead to prevent this. Radio Shack sells a couple different ones :
http://www.radioshack.com/product/index.jsp?productId=2103222&CAWELAID=107599340

I've never had an issue with this with 2 meter rigs, but my cars tend to be of the 'ironclad' class.

For the long term, the Powerpole RigRunner is a good solution, wired direct to the battery. ARES is trying to standardize on the Powerpole connectors so people can exchange power sources and radios as needed.

365. April 25th Radio Class Successful

Yahoo group: rochester_hams

From: k0rgr
Topic: 365 Message: 365

Well, at least we all survived it OK. Now, we wait to see how they do on the test May 7th. I actually had more people than I expected, so it was a good turnout.

For next time, I really need to find a cheaper way to do the handout materials. Last year, my wife got the whole job done commercially, and I thought that was expensive. I got the copies done and stuffed my own books this year - I think it was at least as expensive as paying them to do it last year!

I really like having the handouts for the class - that's also my backup in the event of projector failure. Of course, the one time we didn't do the hard copies, we had a projector problem, so I consider that a warning.

I'd also like to put the handouts on the web site again, so that as people sign up, I can tell them to read the handouts in advance.

> >
> > If Bill K0RGR is reading, he did a great 2m "contest" a few years back. I'd recommend RARC sponsors it again later this summer after Field Day and the July18 DX convention is done. Perhaps shorter, like 6 weeks, informally log your QSOs on 82 or 625 and give certificates to the top 5, perhaps even top score gets a free dinner at Hardys BBQ or something. Bill I am sure remembers what worked and what did not from a few years ago.
> >
> > 73s Dave K0VH
> >
>
> Nice idea there, I wasn't around then but it might be what we need to kick start some activity. Just getting my license around December or so it's tough to get 'comfortable' with the radio if all I'm doing is talking to myself. Luckily I'm persistent (or bored), but I could see other new hams being somewhat disappointed and never really get into it if there's nothing going on.
>
I think it's a great idea. Small trophies are inexpensive, but give people something to shoot for.

Another thought I've had recently is that we need a 'social' net on one of the repeaters during the week. Different folks have hosted a 'ragchew' net during the week at different times.

The 145.45 repeater in Minnetonka might be a model. Their net nights are pretty lively. I don't think we need to have all three of the ham radio news bulletins, but one wouldn't be a bad thing.

Otherwise, try to keep a 2 meter rig listening and answer if you hear somebody. We will soon have a whole new crop of newbies, and it would be nice to make sure they have people to talk with on VHF.

372. Re: Power Stations

Yahoo group: rochester_hams
Date: 2009-05-08 20:19:06 UTC
From: luthsurgitech
Topic: 360 Message: 372

Yes and Yes. I am wanting the flexibility of running my radio in the vehicle and at the same time being able to set it up outside for portable use if I so desire.

Since I am relatively new to the hobby and have now prior elcetronic background, am looking for that grocery list of items that a person would need. So the only thing we can assume is that I have the radio with it's factory connectors (speaking of which... if power poles seem to be the standard, why don't the manufacturers just include the power poles are set them up standard). I don't have the electronic background are there are many deep cycle batteries out there. Mostly I need someone to "elmer" me through this so I don't fry my radio or spend money on something I didn't need because I missed something that is common sense to most people with electronic backgrounds.

I was just at batteryplus and they showed me different deep cycle (gell) batteries (ones for security lights and motorized wheelchairs) and they were much cheaper than the marine batteries commonly suggested. So my question is... what do I need to look for so that I have enough juice to operate at 50 watts for an 8 hour period (like skywarn). I want to get started but need to build my way up. So that is why I want to create versatility by being able to do both mobile and portable.

Thanks,
Rodney kd0ebt

I think you'll find that lugging any battery around all the time is a bit awkward, but many people do.

If you can find the Amp-Hour rating for the battery you're considering, you can do some math to figure out how big a battery you need for a given period of operating time.

A typical dualband mobile rig like the FT-7800 draws about 1/2 amp on receive and 8.5 amps on transmit. Now, in any controlled net operation, unless you are the net control station, your transmit time will be MUCH less than the amount of time on receive. So, you can probably figure that your hourly power drain will be less than an amp, on average.

A compact gel cell will have an amp-hour rating in the 40 AH range. This should power your radio for up to 40 hours. But, if you are transmitting all the time, that will drop to less than 5 hours.

Another consideration is the battery voltage. Some radios are sensitive to the actual voltage level - they may not operate correctly at less than 12 volts- they're designed to run at 13.5 volts. So. you need to determine if the rig is sensitive to that. Different companies. like MFJ, sell 'battery boosters' that will provide 13.8 volts after the battery output has dropped much lower.

Lennie,

Sorry I haven't responded. I would like to take your tower! Two considerations:
1) I will be out of town until Monday afternoon;
2) My hauler is a Dodge Dakota with an 8-foot bed. Do you think I could carry it with that? I could strap it on like a canoe.

Thanks,
Alex.

alex are you still wanting the tower otherwise i will have it cut up and scrapted because i am getting rid of the storage unit and dont have the room to keep it

379. Marine/Deep Cell batteries

Yahoo group: rochester_hams
Date: 2009-05-20 21:35:47 UTC
From: luthsurgitech
Topic: 379 Message: 379

I've been looking around at deep cycle marine batteries, and my question is, Is there any difference? I could go to Walmart or Fleet Farm and get one for about $70 or I could fork out a whole lot more cash for more pricier models. Then there are also the ones of various Ah at batteriesplus. Am I fine with just about deep cycle or are there some considerations. I realize the Ah are important, but not always are the Ah listed especially at Fleet Farm and Walmart.

380. Electrician Needed

Yahoo group: rochester_hams

From: Gil Baron
Topic: 380 Message: 380

I have an outlet in the bathroom that has lost power. I have checked all breakers and they are good. I have no access to the wiring without breaking into the wall.

I am looking for a reliable electrician. Any recommendations.

Please reply here or if you would rather then reply to my email

If it is in your bathroom it is probably a ground fault duplex and they do go bad. I would start with replacing the outlet (if you feel qualified - it's rather straight forward) before going the electrician route. If you have simple test equipment you can test for voltage at the terminals before making the replacement. This is, where the power is delivered, not where an appliance would plug in.

I could replace it but that is not the problem. I put my digital voltmeter directly on the wires to the outlet and there is nothing. It is a mystery since I don't understand how a 14 gauge wire inside the walls could break. I suppose it is continuation from someplace that got loose, used wire nuts or some other ridiculous connection. The problem is that I cannot find it. The light in the bathroom works as does the outlet on the wall in the adjoin bedroom which is within 6 feet on a straight line form the one in the bathroom!!!
It is not a GFI outlet which is a surprise. That will have to be fixed.

From: peter.wollan
Topic: 379 Message: 383

Nobody else has responded, so I will -- even though I don't know much. There are three different technologies in lead-acid batteries: gel cell, AGM (absorbed? glass mat), and "add water". Each of them can be optimized either to deliver humongous amperage, as in starting a car, or to survive deep discharge, as in deep cycle. The car batteries usually report capacity in CCA, cold-cranking amps, while the deep cycle are more likely to report Amp-hours. "Marine" isn't the same as deep cycle. If it only reports CCA, be suspicious that it isn't really deep cycle.

Within the deep cycle batteries, you need to pay attention to whether or not the battery vents hydrogen, which can be a fire hazard indoors. Other than that, price seems to reflect capacity, and maybe quality control, and possibly advertising budget. You're fine with just about any big deep cycle battery.

There are long, detailed explanations of battery tech and maintenance out there on the web.

You could have a bad circuit breaker also. This isn't as likely as a bad gfi duplex, but if the gfi function is in the breaker instead of the duplex the same point holds - gfi equipment is not near as reliable as other house wiring components.

In my opinion, the physical wires in your house would be the least likely to be a problem in most cases. This assumes no construction where a wire might have been cut or nailed through. If you have aluminum wiring you could have oxidation at the connections.

My next step would be to remove the face plate from your breaker panel and measure the voltage at the out of the breaker that services your bathroom. Do it with a load applies at the bathroom. This simple test will allow you to implicate or disprove the wiring. If the problem is a breaker, they also can be popped out and and replaced without too much difficulty.

I have already done this and all the breakers are good. I agree that broken wiring after 20 years is not likely.

From: Jes
Topic: 380 Message: 386

Gil, are you sure there isn't another GFI outlet that is suppling the bathroom? If you don't have a GFI breaker, and the outlet is not GFI in the bathroom, the house has a serious code violation. Usually they would place the GFI outlet in the bathroom but maybe for what ever reason they place it somewhere else and you just need to find it and reset it.

387. New Tech Class needed for Next Year

Yahoo group: rochester_hams
Date: 2009-06-01 17:15:56 UTC
From: k0rgr
Topic: 387 Message: 387

Well, the question pools change again next year, so it's time to start building a new class.

The class we have has been successful in the past, though it's also been surprisingly unsuccessful in some recent cases. I still haven't had an explanation of why only two people from the class showed up for the last test session.

I want to do some things differently this time around. I am not absolutely thrilled with the ARRL License Manual. It's a good book from a reading standpoint, but not a good one from a teaching standpoint.
Chapter One is a good overview, but it mentions EVERYTHING else you'll cover in the class, and you end up repeating yourself. Indeed, there are several redunancies. I've hacked and cut before every class, and still find myself talking in circles at times.

Instead, I want to build a class with some 'labs', and use the labs to present the material in a way that is both useful and instructional.

Here are some thoughts I have on 'labs' for the class:

1. Build a dipole for one of the Tech HF bands. Learn how to solder a PL-259 in the process, measure SWR, and adjust antenna lengths for a particular frequency. I'd also like to demo using CWGet and CWType, though that could be a separate thing.

2. Program a radio for a couple local repeaters and make a contact.
I see us breaking into teams and giving each team a different type of rig to set up, and the manual for it. The teams can then rotate and do the different rigs.

Those two labs, alone, would set up lectures on a wide range of topics. The goal would be to cover it ONCE.

3. Build a circuit that does something we can measure in class.

The cost of reproducing the current handouts is getting outrageous. I'd like to make whatever handouts we generate available on the web (Thanks to AC0ID for putting the current ones out there), so students can download and read them prior to class.

I'm not sure about using the labs to trigger the topics -- I think labs are great, but the course really is teaching to the test, and I don't think you can get away from that. You could, however, just ignore chapter 1 and say things just once, as you get to them in the other chapters.

A kit that might be nice is the Elecraft dummy load -- cheap, simple, and usable as a wattmeter if you add a DVM.

the three that i brought to the class are going to be testing at the august 13th test date, they were all working last test to make it but all have requested the 13th off for the test

Well, the question pools change again next year, so it's time to start building a new class.

The class we have has been successful in the past, though it's also been surprisingly unsuccessful in some recent cases. I still haven't had an explanation of why only two people from the class showed up for the last test session.

I want to do some things differently this time around. I am not absolutely thrilled with the ARRL License Manual. It's a good book from a reading standpoint, but not a good one from a teaching standpoint.
Chapter One is a good overview, but it mentions EVERYTHING else you'll cover in the class, and you end up repeating yourself. Indeed, there are several redunancies. I've hacked and cut before every class, and still find myself talking in circles at times.

Instead, I want to build a class with some 'labs', and use the labs to present the material in a way that is both useful and instructional.

Here are some thoughts I have on 'labs' for the class:

1. Build a dipole for one of the Tech HF bands. Learn how to solder a PL-259 in the process, measure SWR, and adjust antenna lengths for a particular frequency. I'd also like to demo using CWGet and CWType, though that could be a separate thing.

2. Program a radio for a couple local repeaters and make a contact.
I see us breaking into teams and giving each team a different type of rig to set up, and the manual for it. The teams can then rotate and do the different rigs.

Those two labs, alone, would set up lectures on a wide range of topics. The goal would be to cover it ONCE.

3. Build a circuit that does something we can measure in class.

The cost of reproducing the current handouts is getting outrageous. I'd like to make whatever handouts we generate available on the web (Thanks to AC0ID for putting the current ones out there), so students can download and read them prior to class.

Thanks. Lennie - we wondered what happened to them.

391. Ah usage for different watts

Yahoo group: rochester_hams
Date: 2009-06-08 23:04:11 UTC
From: luthsurgitech
Topic: 391 Message: 391

Is there a formula to figure Ah usage for different watts.
i.e. how much Ah battery would be needed for cw on QRP (5 watts)? What other variables do I need to take into consideration is selecting batteries. I found a surplus store up in the cities that had a couple type of batteries for what seemed like a decent price ($6 for a 3.6 Ah battery).

A 3.6Ah won't give you much. Watt Hours like Kw Hours in your house are the measure. A 12 V 3.6 Ah gives 43 Watt Hours assuming you could get it all which you can't.

Now assuming 50% efficiency of transmission that would cut you to 21.5 usable. That would be a 10 watt transmitter output for 2 hours or so. Not too useful. Maybe for QRP which is a hard sell with current conditions.

Topic: 391 Message: 393

It depends on the rig. You need to find out how much current your rig draws on receive, and on transmit. Then, you need to guess how much time of your "on-air" time is transmitting. For a real QRP rig, like a K1 or an SST, receive will be less than .1 amp, and transmit at 5 watts will be something like 1 A. And CW will be something like 25% transmit or less. Multiply it all together -- .1x.75 + 1x.25 = .325 amps on average, divide into battery AH, 3.6/.325 = 11 hours. Then discount heavily, figure maybe 8 hours at most.

However, a tabletop rig may draw well over 1 A in receive, and correspondingly high on transmit, even at 5 watts output. It wouldn't last long at all.

A 7AH battery will run my K2 for a long time. At Field Day, I've been plugging this battery into a 10 watt solar panel. It lasts overnight easily, and by Sunday afternoon it's fully charged again.

By the way, $6 for a 3.6 AH battery is a very good price. Where did you find this price? I'd like to pick up a couple.

Thanks Peter. As for the battery, it was at a place called Ax Man Surplus in the Cities.
www.ax-man.com
There are three locations and I went to the one in St. Paul. It is one of those "a little bit of everything" stores. But they had a large selection of electronic stuff (diodes and all that stuff I don't know about yet), wires, everything. On an end case they had a couple of batteries a bunch of 3.6 Ah for $6 and then a larger Ah battery for around $20 but I forgot the Ah on it. I think there were three hams there while I was there getting parts and stuff.
I charged it up when I got home but I need to get a tester to see how it held its charge.

So my next question is what can I do with a 3.6 Ah battery, or would it be helpful to get a couple of more. We could always put together a little road trip.

All,

I need some window line or open wire transmission line to build some antennas for our Field Day operation. I'm looking for two (2) runs; each about 100 feet long. Does anybody have some we could borrow? Please let me know ASAP. If I haven't heard anything by the end of the week I will order some.

Thanks,
Grant K1KD

This last saturday (6/13)- a small team of folks launched a balloon with an aprs transmitter from rochester.

Pic 1 <http://www.rcpbmn.com/pictures/W0TMP_flight_1.jpg>

Near Rushford it reached appogee at about 88,150 feet, about 1 hour into the flight.

Pic 2 <http://www.rcpbmn.com/pictures/W0TMP_flight_2.jpg>
<http://www.rcpbmn.com/pictures/W0TMP_flight_2.jpg>

The flght was in the evening and you can get a glimps of the sun starting to set. I believe the lake in the picture is Pepin.

Pic 3 <http://www.rcpbmn.com/pictures/W0TMP_flight_3.jpg>
<http://www.rcpbmn.com/pictures/W0TMP_flight_3.jpg>

Recovery was near LaCrosse on the Minnesota side, about 60 miles away from the launch site.

Hi, Lennie - it depends on what you want to be able to do.

Most of us have 'APRS Trackers' which come in several flavors. It's basically just a small unit that takes the output from a compatible GPS receiver, and formats it into APRS messages, and transmits these messages as packets over any VHF radio. Then, people with receive capability or access to the Internet can track your location. This is very helpful for weather spotting and public service work.

Others of us have radios with built-in APRS capability. The Kenwood TM-D700, TM-D710, TH-D7 handheld, and the Yaesu VX-8R handheld have this capability. Some Alinco radios also have a built-in TNC that can be used to send the packets.

There are also 3rd party solutions for receive operation.

This is a good starting point:
http://www.aprs.org/

Another unit is the Microtrak AIO (All In One) unit which uses the same tracker technology that are in the Trackers that Bob abobw mentioned. It is a self contained GPS/APRS unit that I have $250 in cost and you can buy also a tiny magmount (not included) antenna for your car but it is small enough you can carry in in your pack or on a bike.

I will repeat what everybody else is saying, depends on what you want to do, if you just want to be seen on the map and track your movements then a Tiny tracker or AIO is the way to go. The models that are included in full mobile radios have options to send txt messages also (quite a neat feature).

Let us know what you want to use it for and we can give you some ideas. Every example that you heard, of HTs with APRS, Trackers, AIO, and Mobiles, there would be at least one club memeber that has one.

Lennie,

I am pretty new to a lot fo this but I will give you my best rundown of your options. I don't have a lot of expendable income so I have to get my radio gear together piece by piece. So one of my goals for this year is to get APRS going.

I bought the Microtrak AIO because I am not very skillful at putting kits together yet. What I like about the AIO is that I can put it in my car or in my backpack. It also is programable with free software from the company but you need to get the programming cord from them. There is a guy in the club that has an AIO also and he has a cord.

Then there is the VX-8R. It is the new 4 band HT from from Yaesu that is GPS/APRS ready so once you get the HT, you still have to get the accessories for that option so it gets a little pricey. But, one bonus is that the HT will tell you the direction and distance other APRS stations are from your location.

Next are the Kenwood mobiles that are mentioned in k0rgr post. They are really nice with a load of goodies, but also pricey. Honestly if I had the extra cash, I would get one. They have the same goodies as the VX-8R and much more. Plus another bonus is AvMap makes a GPS screen that is compatible with the Kenwood mobile TM-D710 so you can see the stations around you on an acutal map.

Last of all if you are a kit builder, you can build it or buy it built and tested the Tiny Tracker 3 or 4 from byonics.com (they also make the AIO that I have). If you have an extra HT and a GPS antenna then this could also be an option.

There are also many articles on the arrl.org website about APRS and people's different kits.

Good luck.

Lennie,

I am pretty new to a lot fo this but I will give you my best rundown of your options. I don't have a lot of expendable income so I have to get my radio gear together piece by piece. So one of my goals for this year is to get APRS going.

I bought the Microtrak AIO because I am not very skillful at putting kits together yet. What I like about the AIO is that I can put it in my car or in my backpack. It also is programable with free software from the company but you need to get the programming cord from them. There is a guy in the club that has an AIO also and he has a cord.

Then there is the VX-8R. It is the new 4 band HT from from Yaesu that is GPS/APRS ready so once you get the HT, you still have to get the accessories for that option so it gets a little pricey. But, one bonus is that the HT will tell you the direction and distance other APRS stations are from your location.

Next are the Kenwood mobiles that are mentioned in k0rgr post. They are really nice with a load of goodies, but also pricey. Honestly if I had the extra cash, I would get one. They have the same goodies as the VX-8R and much more. Plus another bonus is AvMap makes a GPS screen that is compatible with the Kenwood mobile TM-D710 so you can see the stations around you on an acutal map.

If we plan to use any of these tents for radio operations, my tendency would be to put them up as close as possible to the planned tower sites. That way we minimize feedline lengths and possible tripping hazards. On the other hand, we do not want them to be "in the way" when we try to get the antennas up. What are we using these two tents for again? I thought we had other trailers/campers/vans lined up.

73,
Grant

410. Need Field Day Food pickup for Sunday breakfast

Yahoo group: rochester_hams
Date: 2009-06-25 15:55:37 UTC
From: Dave Naatz
Topic: 410 Message: 410

Is there anyone coming out to the Field Day site early Sunday that can bring the 2 dozen goodies from Panera North? Jeff/manager there should have the order listed in either RARC or my name (Dave Naatz) for a 8:50pm Sat or 7:01am or later Sunday pickup.

Please respond to dcnaatz@... no later than 11am Friday if you can help.

And for all Field Day participants, be sure to check on the 146.82 repeater on Saturday if you have questions. Unfortunately the Saturday morning weather forecast looks WET so we are doing as much setup as we can (minus radios) Friday afternoon from NOON to 5pm. Later Saturday and Sunday look much better.

From: rojomn
Topic: 380 Message: 415

I posted the result long ago. There is a GFI in another bathroom and the wiring went form that one opt the Bath not working. I think that is a STUPID way to save money and never thought such a thing would be done but it is apparently common to save a lousy 15 bucks. Anyhow after replacing the GAIUS all is cool.

A VERY expensive lesson! Total 85 instead of 15. The other 65 for the electrician.

Anyhow, nothing like that on FD. We and over 1000 on CW when I left my last 3 1/2 hour shift. Grant was whizzing out more.

Ha! We had one like this a week or so ago in my house. The outlets in the downstairs bathroom wouldn't work - no problems with breakers. It turned out they are wired to the GFI in the upstairs bathroom. That outlet had never been used, so I have no idea how long it had been popped.

My garage is oddly wired, too. The outlets on the wall aren't GFI'd but the one for the garage door opener is. Most strange...

Now, I have another mystery downstairs. There are three flourescent light fixtures wired in parallel. Recently, they've started randomly failing to fire. If I flip the switch, one may come on. Flip it again, two of the three may start, etc.. We have an electrician doing some work in the house, so I think I will ask him to take a look while he's there.

The hexbeam: mechanically, it had some problems -- the baseplate wasn't strong enough, and it rotated some on the pole -- but electrically it worked great. Strong front-to-back ratio, and enough gain that people could hear our 5 watts quite well. I got both Alaska and Hawaii (Alaska twice). Most contacts were made with no repeats, which was a very nice change. We didn't measure either gain or f/b ratio, but qualitatively the benefits were dramatic.

I've become a believer in beams. I even see why someone might want to buy a commercial version. I don't know how important it was to have it high -- our hexbeam on Brian's push-pole was higher than any of the other towers out there.

Some old fixtures had a plugged in starter that would fail. Some have built in starters. Some have none. I don't know what yours are but see if there is a starter which is about 2 inches long and an inch in diameter that is on each fixture. I don't even know if they are available anymore? Sometimes the tubes do not make good contact with the fixture. I have a bunch on a shelf near my kitchen ceiling that randomly have problems like that and you have to go and move the tubes around to assure good contact.

420. W0DXCC and Contest Central Meeting Update

Yahoo group: rochester_hams
Date: 2009-06-30 17:20:11 UTC
From: Scott Wright
Topic: 413 Message: 420

I have learned within the last few days that Yaesu, Icom, Force 12 and Alpha Radio products will have big display areas at our meeting.

Icom is shipping in an 800 pound pallet with a 7800, 7700, 7600, 7200, 7000 and I think a PW-1.

Yaesu is shipping the FT DX 9000, FT 2000, FT 950.

Alpha is shipping a 9500 - I think

Force 12 is bringing several antennas.

This will be an EXTRAVAGANZA for hams wanting to touch and test the latest HF rigs.

421. W0DXCC Banquet July 18th at University Center Rochester

Yahoo group: rochester_hams
Date: 2009-07-01 03:18:03 UTC
From: Scott Wright
Topic: 421 Message: 421
Attachments: 2 described; binary payloads are missing from this source WARC

The W0DXCC Banquet will occur Saturday July 18, 2009 at 6 PM.

The TCDXA and MWA's very own Ralph Fedor and Glenn Johnson will be the stars of the evening but we will also hear from John Devoldere, ON4UN and Ward Straw, N0AX.

The Banquet caterer requires an advance number for order. We have 9 tickets sold to Metro area hams and less than that to out-state Minnesota hams. We have sold 5 to Rochester area hams.

If you are planning on attending the banquet, I advise you to buy your tickets this week. We will close the banquet ticket sales one week before the meeting and will only have 10 for sale at the door. The tickets are $25.00 each. It will be a very nice evening.

There are some great raffle prizes for give away including two (2) new HF rigs, a new CW Key by Begali, an Alpha wattmeter and subscriptions to DX Magazine and gift certificates to DX Engineering. The Raffle Tickets are only $10.00 each.

We hope to see you in Rochester on the 18th!!

You can log into the banquet ticket sales at https://services.rochestercvb.org/iebms/reg/reg_p1_form.aspx?oc=20&ct=INTERNET&eventid=6269

You can check out our website at www.w0dxcc.com for complete details, a map to the event center, an up to date program and all other details.

As a reminder, there is no FLEA Market officially but nothing prevents you from selling from your car in the parking lot.

For those of you planning on buying your admission tickets on the day of the event, please make checks payable to RARC for the admission tickets and payable to NCDXF for raffle tickets. Credit cards will also be accepted.

We will only have 2 hams working ticket sales from 730 AM to 830 AM and the program will begin at 830 AM Sharp.

Advanced purchase is strongly recommended.

We can guarantee the program will run on time as the "enforcer himself" is attending.

Thanks again,

Scott Wright, K0MD, Chair-W0DXCC and Contest Central 2009

on behalf of the organizing committee (AC0W, K0JUH, N0HZN, AI0M and honorary co-chair, N0BUD).

422. GPS antenna?

Yahoo group: rochester_hams
Date: 2009-07-10 01:48:17 UTC
From: W0VLZ
Topic: 422 Message: 422

John Reed's video on APRS that is up on our club website generated the request for help below. Can someone suggest a GPS antenna that will work with the Kenwood D700?

Contact John at John@...

tnx,
Niel

> Hi, I saw your video on YouTube.com.
>
> I am a Kenwood D700 owner too, and I also love to use APRS. However, I have had a real problem finding a GPS antenna that will work with the Kenwood D700. I did have a AvMap G4T which worked great as a GPS antenna (giving data to the D700 APRS) but I did not like the GPS functions of the AvMap and use a Garmin StreetPilot unit instead. So the AvMap is overkill for just an antenna need. So I got rid of it and started looking for a small GPS antenna that I could plug into the D700 base and use instead. But this is where I have run into problems. One antenna unit, starts with the letter "D" (I can't remember the name) is impossible to get. No one has any in stock and rumor is that the company who manufactures this antenna is going out of business. Yet, when I do a search on the internet, this brand is all that comes up. I found another antenna from a company called Bionics that works with the D700, but I have been through 3 of their antennas in the last 6 months - they just don't last. (Meanwhile my Garmin GPS unit has never had a problem.) I don't know what to do. I saw on a video that someone was able to connect a Garmin eTrex handheld GPS to the D700 to use as a GPS antenna. I have a Garmin eTrex but I have no idea how to connect the two units. Since the D700 is an "older" radio now, I cannot seem to get any help from Ham shops across the country. They just want to sell me a new radio. (Like the D710) Can you offer any help or advice? My email address is John@... and my phone number is (208) 392-5689. I live in Boise, Idaho. Thank you in advance, John Elston KI4LDZ

(message also sent to John directly)

For the D700, the best option is the Deluo "universal GPS" . It comes in two options for powering the GPS (bare cable <http://www.deluogps.com/product.php?id=30-503-01> and cigarette lighter <http://www.deluogps.com/product.php?id=30-513-01>) and can be purchased at several online retailers (like here <http://www.deluoelectronics.com/category/44-APRS_GPS>). This is the solution that I direct everyone toward that asks me if the GPS-710 <http://www.greenlightlabs.com/gps-710/> works with the D700.

The GPS-710 could definitely be *made* to work with a D700, but it loses much of the "built in" advantage when it's used with a D710. The D700 has a different cable configuration, so using a GPS-710 on a D700 would require an adapter just to get power. I tried to make a cable to adapt the 8-pin design of the D710 to the 4/6-pin design of the D700... but my cables are much too thick for the 4/6-pin connectors. Also, the GPS attaches to the TX/RX base on the D700, so if you mount the base under the seat or in the trunk you need longer serial and power connectors. For the D700, I've been pointing people toward the Deulo unit, since it has better attachments for the D700.

Replying to myself, CC'ing John again-

I see now that the Deluo unit is out of stock, as you said. The other option I can offer is the USGlobalSat BR-355 (puck style) or MR-350P (bulkhead style). You will need to be able to hack into the cable and tap into the appropriate wires (5VDC, ground, and TX). I can personally vouch for these GPS units, as they contain the same GPS engine that I use in the GPS-710. Very rugged and reliable - just make certain that you supply a stable (especially no spikes) 5VDC to the unit. They can be purchased directly from the company here <http://www.usglobalsat.com/p-57-br-355-gps.aspx> .

426. Skywarn Photos needed for new ARRL Publication

Yahoo group: rochester_hams
Date: 2009-07-15 14:08:38 UTC
From: luthsurgitech
Topic: 426 Message: 426

This announcement was in the most recent ARRL ARES e-newsletter:

SKYWARN Photos Needed for New ARRL Book
Photos are needed for a new ARRL Storm Spotter Handbook. The handbook covers a wide range of information of use to the Amateur Radio storm spotter. It covers history of storm spotting, the SKYWARN program, storm spotter safety, equipment, training, software, types of severe weather, what to do before/during/after a spotter activation, and an appendix of useful material. The deadline to have the manuscript in is October 1, 2009.

One of the challenges is getting original photographs to include in the book. The author Mike Corey, W5MPC, is seeking photos of spotters in action, severe weather as it happens or damage from severe weather, and Amateur Radio set-ups from NWS offices. Corey is also looking to hear from spotters with first hand accounts of severe weather such as sighted and reported tornadoes, hail, damaging wind, flooding, etc. And finally he is interested in hearing from SKYWARN groups that use newer technologies such as D-STAR, APRS, or Echolink. Any help is greatly appreciated. Contact Mike Corey, W5MPC, Oxford, Mississippi

From: steve wiebke
Topic: 431 Message: 431

Thanks for the quick response to my request for help with the talk in station and parking lot attendants for the convention this Saturday. I have enough people to do the job. We need to be operational by 7:00 AM until 8:00 AM. We are using the 146.820 repeater for primary and 147.255 as back up if needed. Inside the building we will be using simplex = Alpha VHF 147.585. Dave Seavy will have his trailer as the NCS. Check your batteries and frequencies/tones to be ready.

Wear your ARES vest to be visible. I plan to have radio operators at all the road entrances to the college, and between the parking lots and building. Your job will be to direct people to the parking areas and provide requested information.

If those that responded to help have a change of plans let me know ASAP.

Lets have a great Saturday.

From: luthsurgitech
Topic: 432 Message: 432

There is a good article in the most recent QST about NBEMS and using MT63 on the VHF channels.

So here is my question, I have an FT-7800 and it has a data jack on the rear. The chord they recommend is the CT-39. Now, because of my limited knowledge I am confused. On one end of the chord is a nice plug to go into the radio, on the other end is loose wires and in the owners manual they give a scehmatic of what the wires represent. So my questions is what do I put at the other end (device, part number, company,....) and also is there already available prebuilt chords. I know that the CT-39 goes to the TNC and/or computer but how??

Hi, Rodney - page 10 of the manual shows how to hook up a TNC to the FT-7800. The connector is a fairly standard item - you should find it will work with several different rigs. I've made them in the past by cutting the connectors off dead computer mice.

If you're using a Tiny Trak IV as your TNC, they sell a cable, the M12, that I think will work. I'd check with them before ordering to be sure. Any of the cables that work with a 6-pin miniDIN should.

> Hi, Rodney - page 10 of the manual shows how to hook up a TNC to the FT-7800. The connector is a fairly standard item - you should find it will work with several different rigs. I've made them in the past by cutting the connectors off dead computer mice.
>
> If you're using a Tiny Trak IV as your TNC, they sell a cable, the M12, that I think will work. I'd check with them before ordering to be sure. Any of the cables that work with a 6-pin miniDIN should.
>
Thanks Roger, one thing that I've been looking into the the Tigertronics Signalink USB. The reviews look pretty good plus you get the Signalink and the Appropriate chord you need all for about a $100. I was just looking into some cheaper routes in the meantime. Since most computers come with a soundcard, I see a lot of discussions on the various digital forums that a person doesn't need a TNC. But they also say that the TNCs take some of the guesswork out of syncing the sound controls.

I am going to start to get into some digital modes, especially when I pass the General. Particullarly interested in QRP digital. Thinking about getting the FT-817.

What I am doing in the meantime is exploring the digital modes on VHF. I just read in the most recent QST about using MT63 2000 on VHF for message traffic, especially large lists. I talked with Bob ab0bw about it a little and I think it would be an interesting thing to try down in Rushford. We were able to catch the repeater here in town from a park that is on the bluff overlooking the town. I am pretty unknowledgeable in the areas of digital but have had a lot of fun with it on the field days.

Very good - the name here is Bill - I really should change my name to match the callsign.

Yes, the FT-817 makes a good digital rig - I've used mine on PSK31 portable from all over the place. It's not the world's greatest CW rig but that works, too - I suspect the optional CW filter would help a great deal. I had a homebrew interface that was as simple as you could get - a straight wire connection to the audio in on the computer, and I think I just built a little resistive pad for the transmit side. The FT-817 has VOX, so you can use that to control the PTT instead of building a switching circuit.

Actually, for packet operation on VHF, a standalone TNC is not a bad idea. Yes, you can get started using a soundcard interface and the AGWPE software that emulates a TNC, but a real TNC will tend to work a lot better.

I'm interested in playing with the VHF digital stuff you mentioned and also the DominoEX mode on both SSB and FM. I'm in the process of building a new shack right now, and getting the antennas in place in the next couple weeks.

Sorry about the name Bill, I can't remember why I thought another name.

I would be very interested in helping you get your shack and antennas set up so that I can ask you questions and learn some stuff. Let me know if you were going to work on some stuff.

I've been reading a lot of posts on other forums about VHF and digital and it seems very geographical in interest and that the biggest hype was about 10 years ago. Yes, there is aprs, and D-Star, but D-Star is quite pricey to get going in an area. I hear mixed reviews from the Twin Cities area, and I think most of it is because of the investment, and it seems to be one group that is pushing it, and they are kind of their own self-contained group. I even heard the nuiance at their presentation last summer during the Emcomm forum. "If you want to play with us, you have to get a D-Star"

So, anyway, I need to put together a little cash so I can get the Signalink USB which seems to be a very good TNC with ease of hookup for the price.

Rodney

Yes, interest in VHF/UHF digital is largely local, but there are quite a few people around here who are interested in it. The focus in this area has been mostly APRS and Packet in recent years, but other things pop up occasionally, and there are at least 2 people with DSTAR gear in town.

There was also a yahoogroup dedicated to digital VHF UHF stuff, centered in Peoria. They had a PSK31 net every Sunday night on 2 meters, and I used to check in every week - no problem at a distance of 300 miles.

During the big flood in Rushford, if we'd known how to take advantage of it, APRS was working just fine into Rushford from here.

I and others have looked into using NVIS techniques on HF to get down in those river canyons, and that looks very promising. I also know that our EMCOMM counterparts in southwest Wisconsin have been using 6 meters to get down into some of their river canyons, similar to ours.

Hopefully, we can get some other folks to get on the air regularly and see if we can make a go of it. I don't think there will be a shortage of volunteers once we're ready to do.

I don't know about the Signalink USB interface. Many folks love them and I have seen many others cuss them. I have a couple different ones I use. The Rig Blaster USB interface is very easy to set up. The RASCAL is cheap and works fine with FT-817.

Rod (Good Name)

My name is Rodney that is why it is a good name. Anyway, I think that sounds like a good good idea. We have some people in the area that do digital. It would be nice to get some people together to just swap ideas info and setup. Getting the equipment from what I've read was half the battle. Then there is tweeking the sound and such to make it all work. I don't know about you, but I don't have the extra funds to try different things, so I need to get something good this first time. Yes we don't learn always, but there are lots of good reviews out there. I am interested in doing VHF packet because it makes it available to Tech levels (even though I plan to upgrade to General).

So I will chat with the digital guys around here and see if we can at least put together a meeting to discuss.

440. Need a battery charger

Yahoo group: rochester_hams
Date: 2009-07-27 20:47:22 UTC
From: Gil Baron
Topic: 440 Message: 440
Attachments: 2 described; binary payloads are missing from this source WARC

I have an Alinco DJ-G5 Ht. I just bought new batteries and got the 800MAh 9.6V NiMh batteries. The problem is that the charger that came with it and the drop in I bought are not really compatible with NiMh batteries. Perhaps I should have stuck with NiCd. I am looking for a for a charger that will handle the battery. The DJ-G5 is an older radio but quite good and reliable and I do not want to give it up.

Anyone have any recommendations. I have checked out the

http://www.radioinc.com/oscmax/catalog/product_info.php?products_id=1524

MH-C888 Universal Charger Conditioner (Drop in)
[14721]

$59.95

http://www.radioinc.com/oscmax/catalog/images/pixel_trans.gif

MH-C888 Universal Charger Conditioner (Drop in)

But it gets mixed reviews and am not sure how easy it is to set it for the EBP36 pack as they have no custom made cup. You have to drill the supplied adjustable one.

Any help here would be appreciated.

Good evening.

The Rochester group has always been very helpful with the APRS items that I have. And again...I am calling for your help!

I need to put an APRS base station up at the Winona Hospital (CMH). Already installed is the 2-meter radio and KPC-3 TNC. However, I really don't know how to set up the KPC-3.

Is there anyone willing to do that for me? If so I'd be more than happy to bring the TNC to Rochester for you to work on.

Please just let me know so that I can go "live" from CMH with APRS soon.

Thanks!

Hmmm...my first two attempts to post this were interrupted by a request to share it via 'Yahoo Update' whatever that is. IT wouldn't let me post it afterward. I hope it works this time.

We're up to 74 members - that seems like a lot of folks! I hope everyone remembers that this is an available resource for contacting local hams!

On my morning commute, which is an hour earlier than it used to be, I'm hearing a lot of activity on the Wabasha 146.745 repeater between 8:30 and 9:00. If I were a person of leisure, I'd probably join N0PDD and the group in their net every morning.

Does anyone have any ideas on how we can promote more activity on our local repeaters? I've thought for a long time that we ought to declare one of the three as a 'calling' frequency - everybody monitors it and people go there to make contact, then move to another repeater or simplex frequency to chat. It's been my observation that with 3 repeaters on VHF we seem to be too spread out - activity actually seems to increase when one of the local machines is off the air.

I think it's a good idea to have a "calling" repeater - probably the 82 since it seems to be the most popular among traveling and local hams. None of the repeaters are what I would consider to be active, in the sense that morning and afternoon commute is fairly short. After that, they don't seem to be monitored much. Of course in the summer, most people are busy, but even in the winter there isn't much activity outside of drive times. I'm not sure what we can do to get more activity going.

My thoughts is maybe to have another net and begin to experiement with Digital on 2m. That would catch some of the hams that are just technicians. I am part of the NBEMS (Narrow Band Emergency Messaging System) group and some of their discussion is on doing digital on the VHF bands and also repeaters... though I've seen some recent issues with timing out on the repeaters but also a lot of success. It gets new hams learning different modes and more experienced hams doing some of the problem solving and teaching. I would love to get into digital so when I get some HF equipment down the road I can do digital there.

I think there's a lot to that observation. We do/did have a lot of people who used it like a cellphone, and there's much less of that now.

But, there also used to be a lot of just plain ragchewing on 2 meters, too - more, I think, on AM than on FM.

I know I've fallen into the bad habit of not having the rig on most of the time. Having a single 'calling repeater' would simplify that a lot - I could just have the HT on wherever I am. It might make it easier to monitor .82. I can't get into .82 with the HT, but I can hear it. I can set up a crossband repeater, too.

Hey all , I know there are a few people that have VX-170s in the area. I just picked up the programming software so that I could edit and move around my channels to have my ARES simplex next to my Rochester repeater frequencies. So if anybody wants to program/reprogram your VX-170 (also works with the VX-120) let me know.

464. Rochester hams

Yahoo group: rochester_hams
Date: 2009-09-17 20:21:01 UTC
From: Bill
Topic: 464 Message: 464

Someone posted a link to a website that is just a treasure trove of info about cities. This page: http://www.city-data.com/aradio/lic-Rochester-Minnesota.html does a query of the FCC database of hams in the city of Rochester.

There are over 600 entries.

The suggestion was that we use the list to contact local hams whose licenses are in danger of expiring to let them know.

I did a quick search and found one I know whose ticket expired recently, and I didn't get far into the list.

Would there be any interest in manually going through this list? Can someone concoct a program that would do it better?

I think the list is dated, in the listing I could not find some of the more recents hams and, including myself (unless I missed something) and there are other hams that had call sign changes that are not listed there either. I wonder where they pool their data from??

466. Re: [rochester_hams] Rochester hams

Topic: 464 Message: 466

I extracted 50 addressees from the list that have an expiration year of 2009 or 2010 and sent it (privately) to k0rgr. I copy/pasted the text from the browser to a text file and ran the following:

```
tr '\n' '~' < tmp/callsign | sed 's/~\{2,\}/\n/g' | grep 'Expiration
Date: [0-9][0-9]/[0-9][0-9]/20\(09\|10\)' | unix2dos > tmp/callsign.txt
```

If you run unix or linux you can run it again yourself. The input file name was tmp/callsign and the results (50 persons) went to tmp/callsign.txt.

471. ARRL Adopts 'Apropriate Use' Guidelines

Yahoo group: rochester_hams
Date: 2009-09-25 17:11:29 UTC
From: Bill
Topic: 471 Message: 471

The ARRL Board has responded to the controversy about part 97.113 of the FCC's rules. This section, among other things, forbids communication "on behalf" of one's employer. This presents what looks like a problem for MEDARES.

You can download the document at www.arrl.org .

My reading of it boils down to this, in terms of things that affect MEDARES.

1. Communications "on behalf" of an employer are illegal, however, that rule does not apply in a real disaster situation. But, participation in a drill that involves the employer is a potential rule violation.

2. An employer can establish an amateur radio station for the recreational use of it's employees. Obviously, if that recreational station is available for use in a disaster - great.

3. The League encourages ARES volunteers to develop methods of doing drills that do not violate this rule.

I don't know - I suspect we can live with that, though it may make our life more difficult.

It looks like a good document to me - what does everyone else think?

472. Re: ARRL Adopts 'Apropriate Use' Guidelines

Topic: 471 Message: 472

I haven't read the document yet but "on behalf" seems to be somewhat vague. WHy I say this is because even though I am an employee at St. Mary's, I am doing communications for MedComm.

So if I am understanding it correctly, nobody that works for ARRL could participate in their own SET drills unless it was specified within their job description? Right??

I will have further comments but that is some food for thought.

Bill,

I think it would be advisable to get a clarification from the ARRL/FCC. For example, what specific act involving hams are they finding to be odious? Since the FCC has long been an advocate for "emergency" use of the radio spectrum, they allow virtually anyone to use ham radio or any other frequencies in an emergency. It follows that "emergency" situations must have drills in order to assure competent communications when a real disaster comes our way.

The document I'm referring to is the ARRL's clarification on it. Also, one of things they implore hams NOT to do, is to ask FCC! Basically, if you want something to be declared illegal, as FCC staff for an interpretation! That's exactly what happened here, too. Somebody got on QRZ.com and posted a glowing report of the statewide drill he had participated in from the ham station at the hospital where he works. Someone on QRZ forwarded it to the new attorney at FCC who is enforcing the amateur rules. She sent him not one, but two emails stating that him taking part in the drill was a violation. She did not issue a citation, and it was not make public. Now, I see a second ham has also received a similar warning from her. This is what prompted ARRL to establish a committee to study

the issue, and the report is the result.

Oh, in the document, they say that we should interpret the 'on behalf of' rule in the most conservative manner. I agree that it's being stretched a long ways, and I doubt the commission really meant it to mean what it's being read to mean now. But, the commission has been asked to clarify this before, and they refused.

The document does a good job of explaining it all...

In reading the document, my interpretation is that drills shouldn't be a problem for MEDARES provided that any employee of the hospital who is a licensed ham doesn't go on the air. The determination of who the employer is would be whomever issues the W2. Where I see a possible snag is if you're employed by Mayo, receive a W2 from Mayo, but do a drill at St. Mary's, is there a violation? Given that Mayo owns St. Mary's, is there a legal distinction, or would the FCC consider a Mayo employee in violation for the drill at St. Mary's? Again, the way around that is that a Mayo employee stay off the air. They can still participate in the drill in some capacity that doesn't require them to get on amateur radio.

>

Yes, I would agree with that- that's a good input. ARRL suggests that ARES groups find ways to do drills without violating the rule.

Part of the problem with drills is that theoretically, Mayo should be hiring people to test their equipment, so the drills are of 'pecuniary interest'. Yes, I think that's a very weird take on it, too, really straining at gnats. But there is also a real problem out there with companies installing ham stations as their emergency backup, with NO HAMS involved! The plan is that in a real disaster, all the FCC rules go out the window anyway. The fear is that if enough people do that, they'll eventually petition to take over our bands for that purpose.

It is a very real problem that ham radios are falling in to the hands of unlicensed people/companies. While most vendors try to verify licenses before selling equipment, Ebay sellers and similar forums sell to anybody. Frankly, I'd be in favor of petitioning the FCC to make it illegal for any non-licensed individual or companies to purchase or possess ham radio equipment. I realize this won't stop those who intend to circumvent amateur radio's intended purpose, but it might put a dent in the "trafficing" of ham radio gear.

From: Bill
Topic: 486 Message: 486

I'm still hoping to make the club meeting tonight, but I am not feeling too great this afternoon. I don't think it's the flu.

In case I don't make it, for the discussion on classes and outreach, I want to pass on the following:

1. I don't have any classes scheduled. If someone wants to do that, I'd appreciate it. I've offered to teach a class anytime we can get 3 people together who need it, but so far, no takers.

2. The class materials are available anytime they're needed. The foils are on the club website.

3. I'd like to restructure the classes and increase the emphasis on practical matters, and Technician privileges beyond 2 meter FM.

This post is mainly for Bill k0rgr, Dave k0vh, and Peter n8mhd, however those also interested please respond freely.

This is an initial posting to find an informal meeting time to discuss the direction and goals of the Education Meeting. I much prefer weekends as my weekly schedule is variable and sometimes unpredictable. Also some have already mentioned that the could meet after 6:00 pm. Let me know of some potential date and times that would work. I am available the next two Saturdays as far as I know.

488. Question about NVIS

Yahoo group: rochester_hams
Date: 2009-10-24 22:49:05 UTC
From: luthsurgitech
Topic: 488 Message: 488

Here is something that I am wondering if it would work. I heard once about military vehicles that had their HF whip antennas tied down from their rear mount to the end being tied down to the front of the vehicle which allows them to do NVIS. So my question is, if one were to horizontally orient a HF whip antenna on their vehicle, could they esentially do mobile digital? How would it be different if the antenna was vertially oriented?

You bet! A few years ago when I was playing with NVIS this is exactly what I did. I had a little Chevy Tracker at the time. I put a 4-magnet mount on the front of the tracker, and used a Hustler short mast with the long whip. I used one rope to hold the mag mount firmly on the Tracker from the front, and used a second line - a slightly flexy bungee cord - to bend the antenna back over the top of the car. It was not a perfect arch, and it was hideously ugly, but it definitely worked on 40 and 80 meters.

For my testing, I set up a packet radio beacon on these HF bands, and arranged a crude remote control capability, so I could shut it off remotely if I had to. If I had it to do over again, I'd have my Technician son send CW with a keyboard and actually have a QSO.

Bending the whip over had some interesting effects. The rather bad ignition noise I heard with the antenna vertical went away. I could hear very weak signals with the mobile rig. Mostly, though, I could hear that packet beacon from all over the place. I was only running a few watts for the beacon, but it was 20 over S9 in Spring Valley one night!

Of course it was all dependent on conditions. If we were above the 'critical frequency' it didn't work at all, and if we were too far below it, the signal was absorbed by the D and E layers of the ionosphere, so it didn't work there either. Right now at midday, critical frequency is about 6 Mhz., so 40 would not work. 60 meters would be about ideal, though. 80 might be too low.

The military also has a different style of antenna for NVIS that was developed by the Germans in WWII. It's basically a small loop that is mostly horizontal. I think this might be a somewhat more efficient answer than a loaded whip, but the tuning would be extremely sharp on 80 meters.

490. Fldigi and Flarg

Yahoo group: rochester_hams
Date: 2009-11-08 22:09:16 UTC
From: luthsurgitech
Topic: 490 Message: 490

Those of you that have tried or may want to try the digital package Fldigi and Flarq, there is a new updated version. ver. Fldigi 3.12.5 and Flarq 4.2.3 which just posted today. It is a suite of operating digital modes and flarq compliments it by being able to click and drag text (such as health and welfare reports).

If there is anybody interested in experiementing with digital modes on VHF FM starting in January 2010 let me know.

here is the link;

505. Spring Technician Class set for March 20th

Yahoo group: rochester_hams
Date: 2010-01-13 22:48:18 UTC
From: Bill
Topic: 505 Message: 505

OK, I have scheduled our next class for March 20th at the Red Cross Building, from 8-5. I've had a few inquiries from people wanting to take the class lately, so I thought I'd get this out there.

I'm going to ask people to get their own books this time. The book is the ARRL License Manual. Ideally, they should have time to read the book prior to class. I think the $2 they save by getting it through me is more work than it's worth. They can order the book from www.arrl.org, or through Barnes and Noble. In fact, I just checked, and they can get it from Amazon.com for less that ARRL charges the club for it - and I suspect faster, too! Without the book, we will charge $25 for the class.

Speaking of classes, I've looked at the new question pool, and it's vastly different. Actually, I'm not sure the scope has changed, but the focus certainly has, and there are some new questions that frankly mystify me. I almost wonder if we're teaching science or mythology, and putting it on the test. Schematic diagrams are back - Techs have to know how to read them again. I'm glad to see that, but it's going to be very difficult to do any kind of justice to it in an 8 hour class.

I've started playing around with an online course authoring tool called Udutu. I'm looking at cheap MP3 video cameras and MP3 audio recording software. It lets you upload a presentation, like our current ones, and add audio, video, and animation to it. Now, if I can find many, many hours and lots of energy, I can do this! Then, we will need to figure out how to distribute it. My guess is that it will overwhelm our web site. Udutu will be happy to host it. They will do it for free if they can splash a watermark on every page. Or, they will host it for $1 a page. That would wipe out the club's budget shortly. But, allegedly, I can download our course in several different formats without watermarks, any time I want. So maybe it will end up on a CD?

I'm going to start with one chapter and see how it goes. And it will be a short chapter, too! I uploaded the presentation and have recorded one MP3 - so far it looks good!

I may just set up to record the class. My son wants to be an audio recording engineer, so this would be a good challenge for him. I need him to manually record audio for each page of the presentation, one page at a time. That would save me a lot of time.

My goal will be to make the online class for both General and Technician classes, and actually go into much more depth than we do in the 8 hour class. I also hope to make it sufficiently generic that it will not have to be drastically changed each time the question pool changes. I'm going to follow the categories for the questions in the pool, which is the way our class was originally, and not worry about the book. I may stop using a book altogether. Hopefully every time one of the pools changes, all we need to do is change those sections of the class.

I also want to build in a feedback mechanism, so people using the course can ask questions. Maybe we'll do it through this yahoogroup? That would have the benefit of getting potential newbies acquainted with potential Rochester area Elmers at the same time.

Darryl, can you add a link to this group from the page where people are told to call me? I'd actually prefer to see the questions here, and I am lousy about answering voice messages.

Ok, so I am studying up for my general and I keep on reading about in the general manual the "75 meter" band and it's use for mobile HF and good for emcomm NVIS, and so on. So my question is why isn't in on the ARRL band plan or am I missing something so obvious that I should hang my hat up right now. My sleeping hasn't been the best recently so I may be blanking something.

Comments???

517. Re: [rochester_hams] Missing the Obvious??

Yahoo group: rochester_hams
Date: 2010-02-04 14:33:10 UTC
From: Peter Wollan
Topic: 516 Message: 517

Yup, it's obvious if you know it -- the two ends of the band are far enough apart that people describe them as different wavelengths. The SSB end is fairly close to 75 meters, and the CW end is fairly close to 80 meters. Work it out from the frequencies.

In practice, it seems that when people say "80 meter band" they may mean either the whole band, or just the CW half. When people say "75 meter band" they seem to always mean the SSB portion, though.

Thanks Peter, I figured it was something like that but wasn't quite sure.

Well, if I am successful on the test next week, hopefully should be nearing purchasing a QRP radio soon after. I have been doing a lot of research (thank for suggesting the IC-703+). Still wavering back and forth some, but finding the the best bang for the buck seems to be the IC-703, mostly because it comes with a lot of what the FT-817ND lacks. Yes, it cost more, but I would be spending that much if not more just to get the 817 up to the same standards.

>
Remember the formula for converting frequencies into wavelengths?

Wavelength = 300/F in MHz - 300/4 = 75 Meters.

Back before we had any real way of directly counting frequencies, hams actually measured the wavelength of their transmissions with a device known as an 'absorption wavemeter'. This consisted of a tuned circuit coupled to an indicator, usually a small light bulb. When the circuit was tuned to the frequency of the transmitter, the RF would light the the bulb. People would find ways to calibrate their wavemeters - often using transmitters of neighboring hams who were wealthy enough to afford a crystal-controlled transmitter on a known frequency.

The absorption wavemeter was still in the book when I studied for my Novice license.

Sounds good! As far as getting a radio, I don't think it's possible to be completely happy with your first purchase, whatever it is. They're all different, and each one is "best" in some way.

I saw a note from someone who mentioned that he had two Orion VI+'s, and two Elecraft K3's. So that's over $10K, maybe lots over depending on options. And then there's antennas -- as we'll see at the program Tuesday. Best thing is not to worry about it, pick something and learn as much as you can from that. And have fun.

>
> Rodney
>

Rod, I suspect you'll get some ideas on that one.

I assume you're looking for an all-mode rig? If so, that 703 is a good choice.

If you want to learn how to use a solering iron, the Elecraft K2 might be a better choice. If you could find a used Ten Tec Argonaut, that would also be an excellent choice in QRP.

I really like my FT-817ND, but I also use it on 2 meters and UHF. I discovered on Tuesday that I've got some kind of problem on 10 meters. I think there's enough ice on the base of my vertical that it makes the tuning erratic - doesn't happen on the lower bands. So, as soon as I can, I think I'm going to put up an antenna in the garage and dedicate the 817 to 10 and 60 meters.

There is an amplifier kit out there that will bring your 2-5 watt rig up to the 35 watt level, and it's pretty inexpensive:

Rodney,

I suggest you look at the used market for an Icom 7000 rig. It has much better filtering for HF signals than the 703 or the Yaesu 8xx line of rigs. It is more expensive but also a lot more versatile. Remember, the yaesu 8xx line is one to two generations old and the FT 450 outperforms any of them with its filtering and features.

With the Icom 7000, the digital NR is incredible on the bands and quite good with mobile HF ignition noise suppression as well. It is much better than the 706 Mk II g that I previously owned, which the 703 is designed after.

I can say I have been completely happy with four Icom HF rigs that I have owned or have at the moment - any of them have exceeded my expectations and my first rig, a heathkit HW 101.

I use my Icom 7000 on overseas DXexpeditions and for some mobile HF work. But, when plugged into my antenna array at home, it sounds quite close to my 756 Pro 3.

Regarding Peter's comments,

I have operated the Orion II and K-3; I have found both lacking in comparison to the Icom 7800. I wrote a nice comparison article published in National Contest Journal in 2009 that compares all of the top rigs: Icom 7800, Yaesu FTDX 9000D, K-3 and Orion II. Each rig has some pros and cons but the clear winner overall is the Icom 7800. It outsells its nearest competitor 20:1 at this juncture.

Final note- don't get too caught up in buying the best radio - I still advise hams to spend 75% of their budget on antennas as a great antenna and a poor rig still outperform a great rig with a poor antenna. Some of the laws of propagation cannot be overcome with any radio.

Good luck upgrading - we need more HF hams in town.

Scott, K0MD

523. Furnace RFI?

Yahoo group: rochester_hams
Date: 2010-02-19 21:26:52 UTC
From: Niel - W0VLZ
Topic: 523 Message: 523

I'm getting ready to replace my furnace/AC and discovered that some generate RFI that can be hard to resolve.

- Has anyone had experience (both good and bad) with the new high efficiency furnaces/ACs with respect to RFI?
- Are they noisy on the HF bands?
- What did it take to solve the problem?
- Any thumbs up/down wrt particular brands, RFI wise?

Thanks,
Niel - W0VLZ

Neil - the only furnace I've heard of causing RFI is the Lennox Pulse furnace. I don't recall what the resolution turned out to be. Others have been known to generate momentary RFI when the electronic igniter is operating. Of course that's brief, since it stops as soon as burner status is established.

Actually, I don't know how many will be there. I've heard from three now. The more, the merrier. If you haven't already done so, you need to get a copy of the License Manual. Amazon.com has them for about $15, which is less than the club pays for them if we buy them from ARRL.

This time around, I'm telling everybody to get their own, so they have time to read it before class. There is a class fee of $25 at the door.
I'm looking forward to teaching it this time. I am not looking for volunteers, but if anyone would like to help with the class, I'd be glad to have you.

I don't have anything to do with the SKYWARN class, but I'll be there as a student. You need to register in advance for that class. The info is on our club's web page www.rarchams.org .

I see that Mr. Ellis has been given another warning from the FCC.

Mr. Ellis was a resident here some time ago. After initially joining the club and participating in a few things, he started getting on the air, and basically reading a manifesto accusing everybody in sight of trying to harm him in some way. Eventually, the radio club, the police, and Mayo Clinic were all trying to exercise 'mind control' on him. FCC ordered him off the local repeaters, but he just continued harassing people on simplex.

The notice from FCC's Laura Smith published today is addressed to him in South Dakota, but notes that the notice is being delivered to him by a North Dakota police force, because he does not reside at the address on file with FCC. So, I don't know where he is.

Sadly, Mr. Ellis is seriously mentally ill. If he turns up here again, it would be best to ignore him as much as you can. Our repeaters have really not recovered since his last visit. It only takes one guy like this to shut down two meters in an area! I feel sorry for Sioux Falls and Bismark!

Unfortunately, I believe he is back where he was before he came here, and he was in South Dakota for the 2nd or third time before that, because somebody sent me an email warning me that he was on the move again. So, I would not be utterly amazed if he showed up here. Based on well-founded rumor, I don't believe he's welcome in the places he used to go here, so I doubt he has any reason to come.

I actually feel sorry for the guy. He seems pleasant enough when he's had his medicine, but he refuses to take it.

Topic: 546 Message: 546

As a newbie I am wondering what is out there for good used equipment. If you have any rigs just sittin around collecting dust or any thing that could be of use to anyone in the club please post it. I am sure I am not the only one that would like to know what is in the area thats for sale or trade or whatever. Hope to see some cool stuff. Thanks Brian

Hi Brian - I have a Radio Shack HTX-242 2 meter mobile - 40 watt 40 channel for $25.00. It doesn't have the bracket, but we can find one of those universal brackets cheap.

At the April 13th RARC meeting the program will be on EOC operations/information. I will have information packets available for those that where not a the skywarn training in Rocheter to be filled out. We are doing background checks on all Olmsted skywarn members plus getting emergency contact information. The county EOC will be issueing Skywarn ID's at an open house happening soon. These cards will also be used for emergencies operations ID's in Olmsted county. More information at the club meeting. See you there

553. First Rookie Roundup 4/18

Yahoo group: rochester_hams
Date: 2010-04-14 17:06:59 UTC
From: Bill
Topic: 553 Message: 553

This weekend is the first running of the ARRL's new Rookie Roundup contest, aimed at newbies. There are going to be different versions of this contest run several times a year - this weekend is HF+6 meter SSB.

If you were licensed in 2008 or more recently, you can enter the contest as a 'rookie'. Non-rookies are encouraged to work rookies for contest points.

Here's a web page with links to all the details:
http://rookieroundup.wordpress.com/

This contest is aimed at replacing the old Novice Roundup contest from many years ago. The NR was one of the most fun things I ever did in ham radio, so I hope this one has the same kind of impact!

No, IBM discovered after 33 years that I was still on the payroll, and they decided to rectify their mistake. My arrl address is the correct one- it will follow me wherever I may go through the miracle of mail forwarding.

Well, I finally got around to reading the formal rules for the contest and I see that I missed something pretty big. In this contest, General and higher 'non-rookies' are encouraged to help rookies in person by acting as the control operator so that Technicians can operate on the
HF frequencies. In other words, another GOTA type event, but the Elmer in this case supervises the rookie's station.

The contest starts at noon tomorrow, and we should see activity around these frequencies: 3850,7225,14240,21325, 28400 and 50125 to 50200.
The contest ends at 6 p.m..

I plan to be on for at least part of that time. I feel a little unprepared for this one, but it may be another way that the experienced club members can assist in the future. There are two more 'RR' weekends this year. The third weekend in August will be RTTY and the third weekend in December will be CW. We can try to find Elmers for Rookies in those contests if there is any interest.

558. Red Cross Class

Yahoo group: rochester_hams
Date: 2010-04-18 00:35:03 UTC
From: Bill
Topic: 558 Message: 558

I was going to comment on the Red Cross communications class some of us attended the other night.

There's been an interesting shift in a number of things. Red Cross now recognizes ham groups as independent - and there will be a 'liason' person(s) to work between RC's comms folks and the ham groups involved in the disaster.

Red Cross also acknowledges that hams have an important role in the early stages of a disaster - before the RC can get their comm equipment on site - which may be as much as 72 hours after the disaster happens.
And, further, that after Red Cross no longer needs the hams, hams may still be involved with other agencies and the general public, and the hams may need the Red Cross, so that liason needs to be in place.

I think this makes the role of ARES much clearer and much brighter!

I guess we still can't ask Red Cross to let us put a club station in their facility though...

559. QRP Question

Yahoo group: rochester_hams
Date: 2010-04-18 14:48:56 UTC
From: luthsurgitech
Topic: 559 Message: 559

For those that are coniseurs or dabble in QRP, as I am just starting out, I am wondering if there are just some days that low power just doesn't cut through. I heard some traffic yesterday (4/17) that the bands were kind of iffy, at least when I was operating 10a-1230p, and I just had the hardest time getting someone. I also wondered if it was my antenna not working so I took it down and checked the connections. So I guess wondering if there are those days that a person just can't get through. Any thoughts or suggestions?

Also, as I am listening, I sometimes hear the regular fuzzy noise, but sometimes (for a brief period) it goes to no noise at all, I am wondering if that is good or bad.

Maybe someone could give me a little tutoring on the different noises I am hearing again.

Rodney

What frequencies are you listening to and trying to work? What is your antenna? Sometimes the MUF is lower than you may be trying to use.

QRP works very well on CW but not as good on SSB.

In general, it is harder to work DX from Minnesota than most other places in the USA due to our latitude.

The bands have been very good the last few days, especially over the weekend for long and short distance QSO's. The solar flux has been up and the A-Index has been down.

If the A-index goes to double digits, the bands fall apart due to the geomagnetic storm. I experienced that week before last.

Most hams find QRP frustrating and eventually go to higher power; some love QRP however and remain on it. Those who remain active on it use mainly CW or enjoy opererating portable or while backpacking, hiking or bicycling. It helps to have a fantastic antenna like a Yagi, for receive and transmit.

Good luck

Scott

I was on during the Rookie Roundup for a few hours yesterday, and I thought the conditions stunk for working the USA. There was quite a bit of DX on 20, but I had a tough time working certain parts of the country.

40 looked dead early in the afternoon, but conditions improved a lot later in the day.

I would think that yesterday would have been a frustrating day for QRP.

I'm not sure if it's radio conditions, or just what. I would say your best bet would be in the evening on 40. Summertime has always been a challenge for hams - it's been called the 'summer doldrums', and here at the end of April, we're approaching that point. With most of the country enjoying good weather, people are doing outdoor things, and ham radio takes a back seat.

Back in ancient times, the HF bands would be pretty dead in the daytime in the summer, but 40 and 80 meters CW would come alive at night. I think I see a little of this trend happening now.

I also often find that when I think the bands are dead, it's that I'm not hearing the weak ones, either due to local noise, or a sucky antenna. 'Weak ones' are, of course, the norm with QRP. If your noise goes away periodically, that may indicate that it's something you could find and cure, and then you'd be able to hear the weak ones.
If that rig will run on batteries, try pulling circuit breakers in your house until the noise goes away. If it doesn't go away, even with the main breaker pulled, the source isn't in your house.

Another trick I always use on QRP is that I try to find strong people to call. Your QRP signal is going to be 2-3 S units weaker to him than he is to you. If he's S1, he's probably not going to hear you, but someone who's really S9 should hear you just fine,

unless he's got a lot of noise or QRM to contend with.

Also, on CW, it's critical that you actually get on the frequency of the guy you're calling. Some of the QRP transceivers out there use direct-conversion receivers, and it's important to know how to tune the other guy in, or you will end up a couple kHz. off of his frequency. A 'single signal' receiver as in most modern transceivers, will only hear the CW carrier on one side of zero beat. The DC receiver will hear it on both sides, so if you tune in the other guy on the 'wrong side' of zero beat, he won't hear you when you call him.

Topic: 559 Message: 562

Bill, I am doing all portable. I live in an inground apartment and so my options are pretty limited. My windom was swinging in the wind last Saturday and as I was talking to Mel kc0p this morning, he thought that my antenna might have been going in and out. I checked the connections of my isolator and they were good. The only think left would be my balun or the 10 foot of coax that I have. need to learn how to test all this stuff. But I do think that I just wasn't getting through. My antenna was working for part of the time. When 20 started getting busy, finding a quiet spot was difficult. 15 and 17 seemed to get quiet pretty quick. So with 20 and 40 picking up and getting busy, there is a good chance I wasn't getting through. I bumped my power up to 10w but that didn't really make too much difference. Oh well, keep learning and I am learning CW right now so hopefully will be able to get started with that as I am building and trying out new antennas.

Rodney,

You mentioned that you "sometimes hear the regular fuzzy noise, but sometimes (for a brief period) it goes to no noise at all". Once and a while the bands do suddenly go dead but I've never seen them go back and forth for brief periods. What you are hearing could be man-made noise but is likely to be a bad connection in your antenna system.

I agree with Mel, you need to do a thorough check of your antenna. Start with a DC continuity check and then monitor the output (or SWR) as you transmit CW while wiggling any connection you can get at.

73,
Niel

Hi Rodney - how are you making out?

What I've heard on HF lately isn't too great - conditions are punk, I think. Oddly enough, I'm hearing a lot of DX on the bands, but not much in the way of domestic signals. Part of that is probably the vertical I'm using.

During the Rookie Roundup, I had trouble making contacts with 100 watts at times, and sometimes even 500 was marginal. 20 meters seemed unusually unstable - stations would fade in and out rather quickly. 40 stunk in the daytime, but picked up nicely near evening.

If you want to put your 703 on a working antenna, let me know. You can bring it over here and we can see what we can work on my antenna. We're cleaning out a storage shed this weekend, and I suspect that the XYL plans to pile all of it on top of my radios, so it may take a while to find the station again.

If you want to do that NVIS technique while actuallly mobile, you can do what I did - mount the antenna on the front of the vehicle and bend it back.

You might be surprised at what happens when you do that. The noise goes away - even ignition noise is much reduced. I could hear on 80 meters better than I could from home, even with the car running! I don't have any theories on how it could work that way, but for me, it did.

Hi guys;
I have a portable nvis antenna that we used for the Rushford drill. It worked pretty good. I saw an acrticle about a ham that built a nvis on top of his wagon. It is similar to what you said Bill.

Hey, there's a new ham store in the region:

http://www.hamkitt.com/

It's down near Des Moines. I'm excited because I think it's about a block from where we always stop for breakfast on our way to visit the wife's family.

I really try to visit Radio City frequently, and if we go by there when it's open, I usually do. We need to keep our ham stores in business! Now, if I can just convince the wife that it's my civic duty to spend money there...Maybe we can put together a DXpedition to Iowa?

And, N0NUV - about the NVIS antenna - bravo! I think NVIS is a tool we surely need in our kit.

I remember an article in QST some years ago where a guy built a 'screwdriver-like' antenna on his vehicle that was actually horizontal. He did it in order to get a much more efficient mobile antenna. I've also seen the NVIS loops that the military uses in Europe, and wondered if I could fit one over the tonneau cover on my pickup.

All I know is that if you bend the antenna over, magic happens!

I have hiked the Eagle Mt trail many times and operated HT from the top. Nothing special. Just go to the trailhead and fill out the SELF ISSUED permit, no problem.

It is a rocky trail but not too bad a hike. The round trip is about 7 miles. It is fairly flat to the base of the hill and then about a 400 foot climb in a quarter mile so pretty steep there at the end. The highest point is marked with a plaque on a big rock so if you are not there you are not at the top. It is sort of in the woods and the trail leads off to the right near the end.

578. Information on Phased Verticals?

Yahoo group: rochester_hams
Date: 2010-06-03 00:45:01 UTC
From: Niel - W0VLZ
Topic: 578 Message: 578

Does anyone have a favorite source of information on phased verticals? See http://w0vlz.blogspot.com/ for a report on my latest antenna project, a self supporting C-Pole for 20 mtrs.

While this version is self supporting, the crappie poles and most of the support structure could be removed and the whole antenna suspended by the top of the wire loop. It then follows that two might be suspended 16' to 33' apart and fed properly to make a directional antenna. For about the same space as a 20 meter dipole and minimal height requirements I could have a low angle antenna with some gain and directivity.

This gets me back to needing more information about phased verticals. How do I make the phasing harness and what spacing to I need?

Niel

I have read about these antennas in "Low band Dxing" by John Devoldere, ON4UN and "The ARRL antenna book" by Dean Straw N6BV. I also have found the folks at DX engineering helpful as they sell the phasing boxes and cables. The cables are challenging to design due to velocity factor and length issues.

The guys at Array solutions also make the phasing boxes and their website has some information.

You can write/email Dean Straw, John Devoldere and Jim Miller (the ham who started Comtek) for advice.

Good luck with the project. I think you will enjoy it as a low angle radiator for DXing.

Going back to my days of dealing with phased arrays in AM broadcast, Scott is right on point. The cables need to be the same "electrical" length, so making your own is very time consuming, and unless you have a TDR (time domain reflectometer) and a spectrum analyzer, it's tough to do. You need to get the common point of the array to 50j0 (50 ohms and zero reactance) which would require a hot bridge meter. Your best bet is to have a power divider and cables built for you. In the long run, it's cheaper and you won't pull your hair out :-)

Well, yes, it's true that doing it right is difficult and expensive. However, the "naive" method, which uses a 1/4 wave length of coax as a delay line, works pretty well -- you get a lobe off the back end and a bit less gain. The idea is to space the two antennas 1/4 wavelength apart (wavelength in air), and put in a t-connector in the feedline and add a 1/4 wavelength (electrical wavelength) chunk of coax on one side. By putting in a relay, it can be electrically reversed. What you end up with is somewhat unbalanced because of the loss in the delay coax, but it does have substantial directionality.

The DX Engineering boxes allow exact balance and phasing, and can also electrically steer the lobes. Much better, but also much more expensive.

I have several articles in addition to Low Band Dxing -- I'll dig them up for you if you're interested.

From: Bill
Topic: 583 Message: 583

First, I want to make everybody aware of the new online calendar I've set up for ARES District 1. This will hopefully have information on events from all over the 14 SE MN counties. If you're looking for a place to help out, and we don't have anything happening down here, take a look at the calendar. To see it, go to the http://www.minnesotaares.org website, and click on 'District 1' in the left hand frame.

Second, I've started transmitting the weekly 'Amateur Radio Newsline' on the 147.255 repeater an hour before net time on Sunday nights. I'm looking for a backup to do this if I'm not available on Sunday, which does happen occasionally. You'll need a rig with a soundcard interface and the 'EchoStation' software, which costs $20.

All:

I'm a little out of touch as I have not been very active over the past many years. However, I'm starting to tune back in and was curious about the EOC and sirens situation from the June 17th storms.

Does the county still control the sounding of all the sirens? Do they still set them off county-wide, or is it more targeted now?

From listening in, it appears there are two EOCs now also? County and city?

Thanks for the clarifications, and for all of you who go out to spot, thank you also.

<snip intrusive Yahoo! ads>

Hi Matt,

My family and I were listening in on the EOC frequency (155.760) all day/night last Thursday. We noted multiple counties speaking with the NWS out of LaCrosse (Dodge, Mower, Olmsted), and yes - cities talking with counties (Austin, Byron, Oronoco, etc.). Counties and cities were also cross-talking for information, heads-up's, etc.

When the outdoor warning systems (OWS) sounded here in Byron, Olmsted County EOC queried the NWS out of LaCrosse asking if they activated the OWS. LaCrosse confirmed that they indeed did activate them.

That's really all I have, but I imagine W0STV and others have more info.

587. Tornado detection system?

Yahoo group: rochester_hams
Date: 2010-06-24 00:53:01 UTC
From: Bill
Topic: 587 Message: 587

Sometimes when sitting out in a cornfield, in the dark or in heavy rain, looking for tornadoes, I have strange thoughts.

It would be real nice if I could afford one of those marine radar units that the 'storm chasers' on TV use. I've checked - as long as we keep it down to a single kilowatt, it's legal on most of our higher ham bands.

But, somehow, I think a unit with an ERP of something like 1 megawatt, operating only inches from my head, might not be very healthy. Indeed , more important parts of my anatomy might be even more seriously affected.

So, I wonder about less potentially lethal alternatives. Like - maybe sound?

Back in WWII, before radar was widely deployed, U.S. installations in the Pacific had incredibly sensitive listening devices that could detect the sound of airplane engines at amazing distances.

My father got hold of one of these as a piece of surplus, and we had great fun playing with it. Originally, the enclosure for the microphone was about the size of a garbage can. This acted as a resonator, mechanically amplifying sounds.

Even without the resonator, the mike was unbelievable. I remember that we put it on top of the chimney of our home, and we could hear people talking on the street several blocks away - and hear them quite clearly! With the resonator, we could hear aircraft, trucks and trains at great distances.

The key is to have a sensitive mike, a very high gain audio amp, and a system designed to prevent audio feedback. In the WWII technology, this was done by placing the microphone far away from the output of the audio amp - far, far away.

I'm thinking if we could come up with something similar, we could hear that distinctive 'freight train' sound a tornado makes, even if we couldn't see it, and hear it from quite a distance.

I'm also thinking that the tonneau cover on my pickup would make a great resonator, and as long as I used an earphone, I should not have feedback. The biggest concern I have is how to limit the level of sound so that I don't blow my head off when there is thunder.

Anyway, this might be something to think about for storm spotting at night.

The original WWII amplifer is still sitting in the garage at my mother's house. I suspect the mike is long gone, and I'm pretty sure the special speaker it used is too.

588. last weeks emergency

From: Whitetyger_us
Topic: 588 Message: 588

Hello

My name is Tim Martin(AC0PL) I am in Pine Island and a member of the goodhue county ARES/RACES group. I spent last thursday listening to your net.
As well as others such as the Owatonna net activities during the severe storms we recieved in the state. I was monitoring so I culd relay info to our group based mainly in Red Wing.

Something I noticed was that your net controls rarely identified themselves with their call signs. usually it was just net control. I went well over an hour before I heard the county net control give his call sign. the person operating from the City EOC I never heard them give a call sign at all. they only identified themselves as city EOC
or as Rochester EOC net control. If I would have needed to ask either net control for info for Goodhue county I would have had no idea who to call for. It is important to remember that even in an emergency station Identification is needed.

Here is the section on proper station identification for reference.

Subpart B--Station Operation Standards

Sec. 97.119 Station identification.

(a) Each amateur station, except a space station or telecommand
station,

[[Page 568]]

must transmit its assigned call sign on its transmitting channel at the end of each communication, and at least every 10 minutes during a communication, for the purpose of clearly making the source of the transmissions from the station known to those receiving the transmissions. No station may transmit unidentified communications or signals, or transmit as the station call sign, any call sign not authorized to the station.

Hi Tim,

Which frequency/Net are you referring to?

> station Identification is needed.

This sounds a lot like the activity on 155.760 - the Olmsted County
Emergency Operations Center (EOC), hence my question above. That's not
our net/freq.

I was monitoring the three RARC (ARES/Skywarn,Etc.) repeaters that
night, and all stations were ID'ing.

No I was refering too the net on 147.255. The spotters were all using there call signs it was just the net controls who seemed to not use theirs.

Well, my initial thoughts would be to have decibel rejection to get rid of the thunder, and the rain, and all the noises that are not tornadic. If there were research out there about a specific sound (frequency, harmonics, and so on) that was typically emitted from tornadoes, wow that would be a nice detection system.

I am taking that this is the result of some discussion from the Skywarn net the other night which i missed because I was working. I think I have seen something with the Rockwell Collins people down in the Linn County, IA radio club that they have some more portable radar system.

I am sure a dog could hear it faster than anything we could design. But I am wondering if sound is not what we should be looking at. I remember a long time ago in science classes learning that barometric pressure typically drops suddenly when a tornado is eminent. Maybe that could be a focus. Does this still hold true or was that outdated science teaching?

We me want to look out or aprs weather station data and see if there are any trends??

When I was growing up my dad would tune the TV to channel 2 and turn the brightness down to a just black screen...you could see the lightning flashes via static interference...but if the screen turned suddenly white...head for the cellar...because a tornado was near...

I believe the net control stations were opting to use tactical call signs...
Same thing happened later that night when the Rochester Red Cross was in direct contact with the Fire Hall in Ellendale, MN via ham radio...using call sign 'Rochester Red Cross'....
W0STV will have more on this subject...

I have done some research and there is definitely strong interpretations on both sides. Yes, there is the cut and dry face value interpretation that the FCC rules says to id your call sign every 10 minutes.

Where this becomes grey, is there is the other interpretation, during an emergency, Tactical Calls are to be used to indicate location/organization/assignment and that the operator at that location may change often frequently. While the FCC rules indicate that we must identify with call sign, it doesn't specifically address in its wording compliance,restrictions or allowance in emergency situations (unless I missed something in reading). This is where rules begin to trump other rules and it creates confusion. We just saw this with the "pecuniary interest" discussions for drills. While one rule is cut and dry as to what it says, it ultimately hinders process, development, communication, and confusion. Emergency situations would be the prime example. We would significant drop in liscenced amateurs for every violation of the 10 minute rule. That is just on normal communications. That is why the FCC often has to revisit rulings as they have become restrictive to the advancement of amateur radio or restrict proper training and drilling.

There is not a single person that would disagree with you on what the rules say, however what the rules imply can often takes us into a grey area left for interpretation.

I know that the two operators running County and City EOC have been working very hard to set up working with surrounding counties to relay information. If you would have called Skywarn Net Control or County EOC, I am sure they would have responded. As you know we had some pretty rough weather and being one of the operators out there and relying on their eyes soley for my safety when it was dark, missing a call sign announcement every ten minutes is very easily forgiven in my book.

Tim, here is ARRL's position on this, from the Technician Class License Manual, Chapter 8 -

" Tactical Calls

Tactical call signs (or tactical IDs) are used to help identify where a station is and what it is doing. Examples of tactical calls include "Waypoint 5", "First Aid Station", "Hollywood and Vine" and "Fire Watch on Coldwater Ridge". Tactical calls can be used at any time, but are usually used in emergency and public service operations when providing comunications.

Tactical call signs don't replace regular call signs and regular identification rules apply - every 10 minutes and at the end of a contact. Tactical call signs allow consistent identification that streamlines communication based on function. It would be really confusing if everybody had to remember which call sign was performing which function. If a new operator takes over, he simply gives his or here FCC-assigned callsign along with a tactical call sign, such as "This is N1OJS at Race Headquarters." They use "race Headquarters as the tactical call from then on, giving their regular call (N1OJS) every 10 minutes. "

Tactical callsigns are also encouraged in ARRL's emergency communications courses. Furthermore, participation in a net is considered to be one continuous exchange, so the only thing stations using tactical callsigns should need to worry about is the 10 minute rule. Stations don't need to ID, unless they have been transmitting and it's been more than 10 minutes since they ID'd.

Apparently, our net control stations need to consider throwing out their callsigns a bit more often. They were VERY busy that night. The station at the city EOC was dealing with a tornado that took out part of the north end of town, and the county EOC was busy with a bunch of spotters looking for about 30 tornadoes that were known to be flying around out there that night. After that, KD0EBT and AB0BW were working with the EC in Steele County to establish communications between Rochester Red Cross and their shelter in Ellendale.

Thanks for pointing this out. I'm sure the net controls will try harder to remember. But when you are up to your keister in alligators...

No, I missed the net, too - family uprising.

I heard the 'freight train' sound one time when we were out spotting and LaCrosse thought there might be something in the area based on the radar. It's pretty distinctive and does, indeed, sound like a fast moving train. It sounded like it went right over me. I could not see anything due to low hanging clouds overhead, and it was not raining where I was.

I've heard the story about the TV many times. I don't know what the theory is behind that, but I know a lot of people do it in rural areas.

That's OK, just another crackpot idea. I also have a plan for predicting the next big earthquake in California. Back in 1971, my dad observed something on the air, and showed me and my brother. Sure enough, the next morning, the Sylmar earthquake hit LA. Since then, NASA has documented ripples in the ionosphere prior to big quakes, which would explain the sound we were hearing on signals from the LA area. All we need is a string of beacon transmitters and remote receivers, listening for multipath distortion on HF signals. I brought some of my dad's old logbooks home with me - when I get the time, I'm going to find the one for 1971, if I can. I know he made a big note about it in his log.

Would have to find my notes from 3 meteorology classes I took in about 1970 at the U of M Inst. of Technology. They were offered in the physics department by Dr. George Freier who was big into lightning research including Saturn V go/no go decision making with respect to lightning risk at Cape Kennedy.

I recall being taught at the time to tune to channel 13, decrease brightness to just dark, then switch to channel 2 and do not touch the brightness control again. The screen would light up with a tornado "near" due to increased number of lightning strikes (maybe shorter ones too?) which had an exponentially decreasing distribution with increasing frequency. When enough cloud to cloud lightning the NTSC ch. 2 signal, though FM on video, would have components at 56. MHz that were not present at ch. 13 and the screen would go white. Gotta check it out again. Might have it backwards as white is lower signal strength than black and maybe it was start at 2 then change to 13. Anyway...

I had a work study job polishing stainless steel parts of electric field mills. He would send us to the roof of the Physics building during thunderstorms and we would watch the building up of electric field intensity and, for a particular storm there was a particular field intensity which would cause breakdown in the air (lightning stepped leader formation). This depended on many parameters including pollutant/particulate levels, humidity, etc. The neatest part was the ability to watch the scope for a while, note the approximate breakdown field intensity, then give a silent countdown to the next lightning strike. You could "call it" to within a few seconds usually. We fantasized at the time of connecting several of these via ham radio so as to get a 2D view of the field so we could not only be more precise about when but be able to predict WHERE it would strike. The computers that could do the simple modeling for calculating where the peak field intensity was located as it built up using data from several sites was either in the future or at the Control Data plant (a CDC6600 I think it was). WE certainly could not get live connections to THAT big thing (small by current standards)!

Yes The net controls and the spotters were in a difficult situation.
And things progressed and changed Rapidly. as in the storm was tracking NE then switched to the East. That was good for me and bad for you guys. I do want to say that the Rochester skywarn group did a fantastic job that night. And I hope I did not Offend anyone with my observations.

Tim - I doubt anybody was offended. As ham radio operators, it's always good to have someone point out what they see - or more appropriately - what they hear on the air. I was just hopeful that you understood the strain we were under at the time. Thanks for your feedback; it's always good to hear other operators' perspectives.

Yes I did understand the pressure everyone was under. That was one of the reasons I waited all most a week to mention it. I have been both a Net control and a spotter in the field and both jobs have there own demands and it can get scary real fast. Especially at night being out in the middle of nowhere wondering to yourself what am I doing out here..LOL

Gentlemen, I'm sorry but I'm going to argue the other side of this. I was part of the net last Thursday night and was in a location of little activity so I had plenty of time to listen to the net.

The two net control operators did a fantastic job and when things did quiet down the did use their call signs. Maybe others need to do a better job of listening.

Now I know the rules and I'm a little upset that so much time has been waisted on this subject. Is this all we have time to do is go back and try to shoot holes in a outstanding performance? I have been net control many of times in the past and when it gets hairy I really don't give a hoot about the rules. I, and hopefully the rest of the people involved are there to help warn and protect the general population of our communities. I'll bet my license that if the FCC were in town and heard last Thursday nights net they would say nothing but Good Job!!!! When things cool down, I'll play as strictly as I can by the rules but when the heat is on all bets are off.

We have a good group of operators but even the best of them get excited when the wind starts blowing 80 mph. At that point in time we need the important information, not the proper call sign given at the proper interval. There are some tongue twister call signs out there and even when it's just a rag chew they can be hard to say. I don't want to miss passing important traffic in a timely manner that could possibly result in saving a persons life.

It's disappointing that we are waisting time chatting about if the net control ops ID properly or not when we should be focusing on did we give correct information, the correct location (which we didn't more than once). We need to work on our radio procedures, how we give the information and what information to give. When I have a tornado bearing down on my city, my call sign is the last thing on my mind.

Lets focus on the important things and make sure we give accurate useful information in a timely basis.

For those of you that don't know me and those that do, I'm not upset even though it may appear that I am by the test above. I'm just really getting tired of how screwed up this world is getting and people need to get their priorities straight. If I have offended anyone I'm sorry but I will stick by my text above. We have a job to do and we need to do it. When a situation like last week happens we need to streamline the process. If that means using tactical calls do it. When it cools down we can use our call signs.

Now, does anyone want to talk about how and what traffic to pass?

Respectfully

John

Topic: 588 Message: 603

Gentlemen, I'm sorry but I'm going to argue the other side of this. I was part of the net last Thursday night and was in a location of little activity so I had plenty of time to listen to the net.

The two net control operators did a fantastic job and when things did quiet down the did use their call signs. Maybe others need to do a better job of listening.

Now I know the rules and I'm a little upset that so much time has been waisted on this subject. Is this all we have time to do is go back and try to shoot holes in a outstanding performance? I have been net control many of times in the past and when it gets hairy I really don't give a hoot about the rules. I, and hopefully the rest of the people involved are there to help warn and protect the general population of our communities. I'll bet my license that if the FCC were in town and heard last Thursday nights net they would say nothing but Good Job!!!! When things cool down, I'll play as strictly as I can by the rules but when the heat is on all bets are off.

We have a good group of operators but even the best of them get excited when the wind starts blowing 80 mph. At that point in time we need the important information, not the proper call sign given at the proper interval. There are some tongue twister call signs out there and even when it's just a rag chew they can be hard to say. I don't want to miss passing important traffic in a timely manner that could possibly result in saving a persons life.

Yep,
Lots of things can be ironed out with respect to getting the right info to the right place as quickly as possible. We all find that we didn't plan for something sometimes when we most need it. Wabasha County was pretty much on the periphery that Thursday so I did what I usually do, head upwind tagging western Winona County (and picking up a new spotter there) then heading west, guided by the two spotters checked into the Wabasha 146.94- machine, one of whom had her eye on the radar. I could have checked in to the Olmsted County net and did monitor it at all times but at 8-9 PM it seemed well staffed and reports were coming in that the radar showed things brewing in the Dodge/Mower/Steele junction area. Using the Wabasha machine for a while but then finding coverage getting sporadic as we neared Hayfield I switched to cell phone back to Wabasha for guidance and for giving reports as things were getting very busy in OImsted and we were not even IN Olmsted Co. Now, I have a lot of repeaters programmed in memory but realized I had none of the 3 counties named above programmed in. With the sirens going off as we got to the west edge of the town of Hayfield, Our anemometer reading some peaks as high as 60. mph, and a very threatening looking bank of clouds dead ahead, I decided to go South in hopes of being able to go west again and then back North so mkight be in the "rear passengers side seat" as they say. Well, it turns out we were a few miles from the tornado seen West of Hayfield but I had no idea how to contact a SKYWARN group in ant of those three counties if we HAD seen something of note. That was not the time to be pawing through the repeater directory like I was doing. Checking on the internet, a lot of the country does not make it easy to find all the SKYWARN repeaters, most of the midwest is pretty good in that regard. It would be a good idea to expand the bank of repeaters used for SKYWARN in your rig, or even just jot them down in a notebook in the car. Anyone interested in trying to accumulate these lists for areas beyond LaCrosse and Chanhassen??

Topic: 588 Message: 605

I want to second what John Scott said in his note.

My family and I listened to the net on 255 from my ham shack which doubles as our storm cellar. We had strong winds at my place and tree damage. We appreciated the updates from the hams on the net. We marveled at the calm way Steve conducted the net and the spotters worked.

I have listened to our emergency nets for much of the 21 years I have lived in Rochester. This club does ARES and weather spotting better than any club I know about period. The net last Thursday was a textbook example of why Ham Radio is critically important to public safety. I commend the control operators - I only recall Steve W0STV -and all of our club members who were out there. You were risking your health and welfare by watching out for all us. THANK YOU!

Like all of you, I was very worried about Dave Seavy, KC0UCN, when he radioed he had taken a direct lightning strike. I was relieved when he came back on the air ok.

Thanks again.

Let's not criticize performance, let's celebrate a well executed drill that actually made Rochester and its surrounding communities safer because of the work of those of you who were on the line!

Scott, K0MD

I appreciate the concern, and I do agree with John and Scott. Had we recorded the entire net and sent it to the Commission, it's very unlikely they would respond with any sort of warning, etc., about our operational procedures during the storm. The more I thought about this whole thread, I realized that Tim's complaint is misguided. The argument that he wouldn't have known who to call fails. He knew both EOC units were operational, and he knew they were Rochester and Olmsted County. That's even more concise than a set of call letters. I'm not offended, as I believe all spotters and net control did an outstanding job during the tornado. The last thing we need is someone as a Friday morning quarterback throwing the FCC regs at us. We already have one local ham who can't function without a book to go by, we don't need to add to that. And this same ham shouldn't even be on the air most of the time since you can't understand his mumbling. The rules state communications must be intelligible. If we're going to split hairs, perhaps we should throw him off the air, along with everyone who didn't ID every 10 minutes during the tornado. If it comes to that - I'll hang on simplex with another group I know well. But it won't come to that, and if I had it to do all over with Thursday's event, I wouldn't change anything, nor would I want Net Control to, either. They did their job and they did it well. I challenge anybody to prove me wrong.

Dave Seavy

From: Bill
Topic: 607 Message: 607

Everybody should take a look on the www.mn-section.org website. Governor Pawlenty has declared this coming weekend 'Amateur Radio Recognition Days' in Minnesota. At least we get a thank you from somebody!

Jon, UNB - a list of SKYWARN repeaters is a good idea. There are some resources out there, I will try to pull them together. I've programmed in the ones I know about. The statewide ARES plan lists a lot of frequencies, too, and not just for ham radio.

Another thing I want to see eventually is the ability to at least temporarily link repeaters in different areas. How we link them doesn't matter that much to me at this point, either. After the big SKYWARN event Thursday, we needed to establish communications between Rochester Red Cross and their shelters out in Steele County. I got the EC in Owatonna involved, and he found a ham to go on site. AB0BW here was able to get into the Owatonna repeater from his home, and set up a crossband repeater to UHF, so Rodney KD0EBT at the Red Cross could talk directly to the stations in Steele County. This is one of the kinds of communication we will need in a real disaster.

Before a recent trip to Texas I tried getting lists by looking up the NWS sites along the way, selecting SKYWARN and seeing what they had. Good lists for areas around DesMoines, Davenport, Topeka, and a couple others. Many however just talked about the SKYWARN concept and neither had a list for their area nor link to an organizational SKYWARN (like "metro SKYWARN" in Mpls. area). National SKYWARN website(s) did help in a few small ways but I didn't get much. I was almost to the point of going through the ARRL repeater directory and copying out every one of them with "Wx" in their descriptors. Some,however, put that in because they are informally up during events, just re-broadcast NWR watches and warnings, etc. so is probably TOO inclusive. Contacting each NWS office WCM (Warning Coordination Meteorologist) ocurred to me too (maybe Todd could steer us on whether that is likely to generate timely data or not). I could talk to him. I have too many irons in the fire now but who doesn't so I feel I can be either a chief or an Indian is this idea. Maybe one person could figure out the best approach and another(s) could do the grunt work. I can forward what I have to anyone who wants it. Someone here just had an idea. Would a scout (troop?) be interested in doing this for a project such as Eagle Scout. Just heard of one who inventoried graves of veterans, gathered info for limited biographies of each then made an on-line cross-correlation sort of deal so people would know what they wanted about who was where. I, for one, need this info in a 3-ring binder format. When traveling (been to over 90% of the counties in the US), if I need it at all I need it within 5-30 seconds or it is probably "old news". Can't stop at some internet access point and go on-line. Cell access is still WAY too scarce. Only in cities over 500 and within maybe 50 miles either side of a major road. That's not where I spend a lot of time!
Also linking. Wabasha repeater is ready to go anytime (one days notice) to link on 70/35/23/13 cm.; 135.cm. would take me a week or two to set up. Guess nobody wants to link with us :-(

Well it does seem as though I did offend at least 2 people. And where did sending a recordng to the commission come in. I never said any thing remotely close to that. And as far as wasting time on this. all I did was make an observation as to what I heard on my side.
I also commented on how good the spotters and net controls did.
Sometimes in difficult situation we forget things.
As you can tell I am a bit offended myself s I feel there are words being put in my mouth I never said.

I know that in the western part of this ARES district, there is one high level repeater that is used for SKYWARN in several counties.

As for linking your repeater, I've sent a note to our Tech Committee - I think it's something we should look into. The biggest problem we have over here is that all of our repeaters are monoband affairs. If we had a repeater on another band - I think 222 would probably be ideal - located at one of our 2 meter sites, it could be the hub for linking most of big repeaters in the region.

Waseca County Emergency Management has a very good website with lots of ham info. The primary SKYWARN repeater in the Waseca area is the 146.94 (no tone). They also use the 147.240 (PL 136.5) in Mankato, which is a hub for the NWS in Chanhassen. The Mankato club has a fairly comprehensive list for their region on their website. Steele County is 147.105 (PL 100) with very wide coverage. I believe Austin uses 146.73 for SKYWARN.

The ARES plan for the state has a list of simplex frequencies, and there is a partial list of ARES repeaters around the state. Your idea of finding a Boy Scout who needs an Eagle project is a great one.

611. Station ID

Yahoo group: rochester_hams

From: steve wiebke
Topic: 611 Message: 611

I have just now had time to get on the computer to check e-mails. I read the e-mails on the EOC's IDing their stations. The bottom line is the person originating the question is right. The rules state we need to ID at least every ten minutes. I get focused on the radar and talking with Mike Bromberg from the county side of the EOC and forget about time. I do not want to ID every time I talk knowing if I will be talking again in the next few minutes. Which I usually am doing.
The bottom line is thanks for bringing this to my attention and I will do better

Hey I think you guys are doing a great job and have to take this whole thing for what it is. This was an observation made by another ham. I dont know this guy and that doesnt much matter. He is right and thats all there is about it. I think he is just trying to help us make our net that much better. Steve is a great net control operator and I have to give him a big hand for doing a great job. I dont know of very many people that would give up as much as he has for the better of the comunity. Thanks Steve. There are alot of great operators here and I hope they dont say things that we as a group will regret. Lets live and learn.

144.240 SSB net is at 8pm central every Wed. For best
results, use horizontally polarized antennas, as this is the standard on SSB portions of VHF/UHF bands. Your 144.240 net control
is WB9LYH Mark in Wood Co, or EN54cl. For more detail,
including helpful tips, visit this post to kc9bqa.com
http://kc9bqa.com/?p=2974

Every Thursday night you have two friendly, active FM simplex nets to choose from. KC9BQA in S Sheboygan Co. on 146.430
at 8pm and WV9E just north of LaCrosse on 146.460 at 8:30pm.
All are welcome, please spread the word. We use vertical
polarization, as is the norm on 2m FM. More detail about the
FM nets is at http://kc9bqa.com/?p=2985

I was reading the Owatonna club's newsletter, and noted that they now have a live internet feed for their SKYWARN repeater - the 145.49 machine - so anybody can listen in via the Internet.

We could do this here, too. Do I hear a volunteer who like to provide the Internet feed? All that's needed is a receiver for 147.255 and a high speed Internet connection. The software is free.

http://wiki.radioreference.com/index.php/Become_a_Feed_Provider

While I'm working on my grand plot to link the whole world, this would be a nice step on the path.

This is very neat.

Perhaps someone is also equipped to do the same (provide the audio stream) for ARX's WXK41/162.475 station?
<http://www.wunderground.com/wxradio/index.html>

I'm not equipped to do so at this time :-(

I use my iPhone quite often for APRS. There are a handful of dedicated APRS iPhone apps. The apps I use are PocketPacket and iBCNU.

Both apps transmit data via APRS-IS (via cell network &/or WiFi). PocketPacket actually has TNC/modem capabilities so you can couple it with your transceiver via the iPhone headphone jack. iBCNU has messaging capability, but no TNC.

Not sure what type of phone/device you have, but there could be apps/ways to do APRS for it.

I find Weather Underground to be the best. Especially if you pay the 5 a year to be a member which kills advertisements. Take a look at the wundermap feature that lets you select any area of any size for the entire world! Obviously better data is available for US but few other sites have world coverage and none have the granularity and features of this one.

GRLevel3 (http://www.grlevelx.com/grlevel3/) with an Allison House "storm chaser" subscription (http://www.allisonhouse.com/storm_chaser.php) is the best I've seen. If definitely requires some knowledge of radar (reflectivity, velocity, etc), but is much easier to work than the other Level2 applications.

If definitely requires some knowledge of radar (reflectivity, velocity, etc), but is much easier to work than the other Level2 applications.

Thanks for all the information, folks.

For now, I've resorted to using Google Earth with METAR, NEXRAD and NWS warning overlays/KMLs. Oh and APRS. Works pretty well for now on my Linux and Mac computers.

Can anyone tell me who i could contact for Skywarn in Mower county? I live in Racine and went to the Skywarn class at the International Event Center in 2009, but never did anything with it. I know Olmstead has a organized setup, but what about Mower?

I tried to get onto the forum for Austin Amature radio, but the registration page is not working.

Any info would be great.

Thanks,

Chad - KOCET

Hi Chad,

Try giving my friend and Austin ARC member KC0UWF (Mike Gherke) a call on the ARC repeater(s). He's also the Chief of Police in Adams, and I'd bet he'll be able to point you in the right direction. He's a very active Ham in Mower Cty.

Having spent two of the last three SKYWARN events on a hill just west of Racine, I think Olmsted County would be glad to have you, too, Chad. We use the 147.255 repeater for SKYWARN. Vince, KC0NPG, is the ARES EC for that county, and I expect he can tell you, as well. Vince's email is hamradioATsmig.net (replace the AT with @).

Hello guys,, and thanks for the heads up Chip,,

In Mower county, spotting through-out the county is done by the Fire Dept, Amb service, in each of the greater Mower County towns ie; Grand Meadow, Lyle, LeRoy, Dexter, Adams, and Brownsdale. The spotters are all SkyWarn trained. Racine does not have either of the services, but I know Stewartville FD is very good at providing coverage to the extreme NE corner of Mower.

The city of Austin uses the AARC (Austin Amateur Radio Club) for there spotting service.. in a sense, the AARC is on an island of there own in Mower. Everybody else (spotters) are on our Emergency Management Channel or the services local repeater, which the LEC in Austin monitors/pages from.

speaking of pages,, the LEC pages out the appropriate service on where the storm is likely to occur..

Ideally,, Nat'l WX service contacts LEC of potential tornado, LEC pages out FD/AMB in county, and calls one of the AARC club officers and advises him of spotter activation. all the FD/AMB are on EMG Mang channel, (except for the hams).. Someone from the club volunteers to be net control and coordinates the hams. The FD all have predetermined spots to set up first then adjusted from at that point.

clear as mud???

lets just say,, it needs some work... and there is a group of concerned people who are taking steps at correcting this,, :)

if you are a ham guy in Racine to be most useful get involved with the Stewartville First Responders/FD guys, good bunch up there. if you can't,, get involved with the Olmsted group,, they deploy for everything. and do a wonderful job. when I worked in Grand Meadow, the RARC were my front line defense of WX coming from the north.

good luck
Mike Gehrke

Hi, Mike - are you involved in the 'SKYWARN Enhancement' project for Mower? I'm the new ARES DEC for Southeast Minnesota, and I've got a number of projects on a list. One of those is to find a way for WX9ARX at the NWS in LaCrosse to talk directly to the hams in Mower County during SKYWARN events. Apparently they can't get into the Austin machine directly? At one time, W0EAS had a link from the 147.255 repeater here to one of the machines in Austin, and I don't know what ever became of that, but it might be a way to resolve the issue with WX9ARX and improve cooperation between the SKYWARN teams in both counties. We usually look toward Mower to see what's coming!

647. FCC Rules on Employee Participation in drills

Yahoo group: rochester_hams
Date: 2010-07-15 13:46:40 UTC
From: Bill
Topic: 647 Message: 647

FCC released a Report and Order on this controversial topic yesterday. The anti-Whacker and Conspiracy Theorists will not be pleased.

Now, employees may participate in drills, whether government or non-government sponsored. If they are non-government, they are limited to one hour per week, except for twice a year they can go for 72 hours.

They also added specific exemptions permitting hams to advertise their gear for sale as long as it is not done on a 'regular' basis. So, if there was any concern before, you need not worry about participating in a Swap and Shop. Indeed, our local ARES leaders discussed having a Swap and Shop net here. Anybody willing to volunteer to take that one on?

Attention teachers! You may now use ham radio in the classroom during school hours (if there was ever really a question) while you are teaching.

If you work for W1AW or any other station that meets the criteria - and there are some tough criteria - you may be compensated for transmitting code practice and bulletins.

>
"Skywarn Enhancement Project" ??? never heard of it..

at one time about 3 years ago, the plan was to put our 73 repeater on the new and improved tower by Elkton. but that fell threw.. The thinking was Elkton was closer and Higher then Austin making LaCrosse WX accessible on the repeater.

Our County spotter system does not revolve around ham radio, we use the FD's local repeaters for inter-talk groups, and the fire service base radio has "Emergency Management East" freq. If one of the spotters sees something reportable, he reports back to the fire hall, then that net control calls Austin LEC on EM Mange freq. the LEC sets off tones for the tornado siren for that area or areas involved..

With that said,, the Austin Hams are responsible for skywarn coverage for Austin, Austin only..

I have a real big problem with this set up. but that is the way our county EOC wants it... (that's another story, someday offline)..

Bob, your the new ARES DEC,, ??? I'd like to chat with you about some of the plans.. my work phone # is 507.438.2765.. I work mostly evenings... we'll talk..

as for the OP's original question,, get involved with the Olmsted group. lots of call outs up there. if you ~want~ to drive to Austin, come on over.. we welcome any all hams.. but that's 40 miles from Racine..

>

I'm expected to hold at least one meeting a year for my EC's. That presents some logistical nightmares, though now, with only 6 EC's in place, we could meet in a phonebooth. I was planning to buy lunch - those big Subway sandwiches aren't that expensive. This is also the reason I'm pushing for more repeater linking - it would be great if we could do these on the air.

I like your idea better, but if we're going to open it up to everybody, it would be great if we could get a club to sponsor it.
If we could find a real auditorium/theater space with plenty of seating somewhere, and serve refreshments, that would be stupendous.
I'd suggest a tailgate/swapfest prior to the meeting, but things might get out of hand.

Would you like to run with this idea? Rochester would not be a bad place, but Owatonna would be better if a meeting site could be found.

Speaking of swapfests, we talked about having an on-air swap and shop net on one of the local repeaters, mostly just to increase activity.
What are people's thoughts on this? In the cities, they do this on Saturday mornings, but that would interfere with the breakfasts down here.

I would like to be the first to second the praise for what
Bill has done! I also think a get-together would be a good
idea. I didn't read carefully enough the first time about

all "hams" as opposed to "ECs" being at a meeting. Both ideas have their own merit of course and doing both can be valuable (but I think I said something to Bill at the start about my distaste for meetings as opposed to "doing"!!) but I have a slight leaning toward ECs meeting first to get a scope for what might be the structure for a meeting inviting "all comers". Maybe that is just my need for structure but I have been at many meetings of the Minn. Repeater Council (and was on the recent committee for redoing the coordination rules) and we ended up with a bewildering stack of ideas that took the next two committee meetings to sort out despite attempts to focus the crowd at the general meeting.
Reasoning by analogy, If the ECs agreed on (e.g.) five ideas that needed to be pursued in the first year (?) and other thoughts would not be discussed it might help. But maybe EmComm types are different than Repeater types and a wide-open meeting would be fine. I'll go with the majority!

I could offer meeting space here at the hospital but you can hit Wisconsin with a rock from here!

Jon,
I completely agree with you. I am on a committee at work that is still talking about a survey we did back in January and very little has come of that. Having an open free for all with a lot of hams with a lot of ideas would definitely deter and delay our ECs and DEC from accomplishing some well needed goals for SE Minn right now. My thoughts are that the DEC and EC's could meet and establish these goals, and action plan, then present in an open forum either with their specific county ARES groups or in a large overall group, either could be a possible scenario.

I think the majority of hams in the area agree that we need to be a little more connected with each other I am also coming to discover that there are variences from county to county on how hams are involved logistically and geographically in various emcomm ops. Something for DEC and EC's to discuss initially.

I don't want to overtax us all and come up with a huge event. Something like a meet and greet for DEC, ECs, and their respective county hams. Having format of the DEC and ECs meeting separately as a workgroup and the rest are occupied in some swapmeet, show and tell, and a couple of presentations, and whatever else. Then the DEC and ECs could come back at the end of the day for a final discussion and forum. I don't mind being a forum cop. We could start at 10 and be done by 4.

I saw from our most recent meeting that we have hams in at least our area (and hopefully the other areas) that are itching for something to do. In areas clubs there have been some recent presentations of Emcomm value that could be brought out of the drawer and dusted off to present, leaving some planning, coordination, and finding a location. Keep it simple and pool from our own resources that we already have.

An initial format off the top of my head.
10:00 - 10:15 am --- Introductions of DEC and EC's
10:15 - 11:15 Presentation for the rest of the hams
10:15 - 11:15 DEC and ECs meet in separate room (phonebooth)
11:15 - 12:00 Lunch
12:00 - 1:00 Show and Tell
1:00 - 1:50 Presentation
1:00 - 2:00 DEC/EC meeting
2:00 - 2:50 Presentation
2:00 - 3:00 DEC/EC meeting (if necessary)
3:00 - 4:00 Final Meeting with DEC, EC's and hams.

Swapmeet 8:30 am before the meeting.

Gary Peterson did this when he was the SE MN DEC. This lead to joint venture overnight ARES drills with other agencies. and some fun but surprising twist to scripted training. Example: When the communications van was captured, and one of the radio operators sent out a CW-SOS on his FM radio using the PPT button to the field units without the capturers knowing it. Train for the unexpected was the rule.

Subject: [rochester_hams] Southest MN ARES Idea

First, I want to commend and thank Bill k0rgr SE MN DEC for the hard work he has been doing in his first months as District 1 DEC.

What I was wondering is what were people's thoughts about putting together a small informal/formal meet and greet , meeting or mini-conference for a day in the fall to bring together hams in ARES District 1 to pool ideas resources, open forum, eat (gotta eat together) what ever it may become. Bill, I hope I haven't stepped out of bounds here by suggesting this and apologize if I have. I wanted to see if there is some interest in such a thing. It could be a great opportunity to build relationships with the other hams in the area. Thoughts???

Yes, Gary and I have been in touch, and I am looking forward to meeting with him when I get back.

I'm going to start asking my EC's for their lists of projects they'd like to see happen in the district. I know that asking for democratic participation is the kiss of death for my benevolent dictatorship, but that's the way it goes...

On that note - I drove through Nebraska last evening and it was educational. There was quite a tropo opening, so I was hearing a big chunk of Nebraska, Iowa, and Missouri at the same time. It's amazing how many ARES nets meet on Sunday night! Even in the middle of about as far from noplace as you can possibly get, there are ARES nets.

I did find one unique one, though. There is a 'Nebraska IRLP Net' every Sunday night. Repeaters from all over the state get linked together. I was driving through Lincoln and the net control was in ScottsBluff. They run it like a big roundtable, with everybody throwing in their two cent's worth.

667. Wouxun

Yahoo group: rochester_hams
Date: 2010-07-23 23:50:07 UTC
From: Bill
Topic: 667 Message: 667

OK, I am officially eating crow, and it's pretty tasty.

I have been making disparaging remarks about these cheap Chinese knock-off radios. All we need is for somebody to run ICOM, Kenwood, and Yaesu out of business, right? I've seen some negatives about several of these radios, but the Wouxun KG-UVD1P units seemed to be getting very good reviews. I assumed this was clever marketing.

At $107, including a drop-in charger and some other handy items, I figured I'd buy one of these VHF/UHF dual banders as a throw away item. I also bought the programming software (please don't ask me to do it by hand!). The total was about $120.

Well, I got home from my trip last night, and found a nice package. The radio looked very impressive. It was about the same size and shape as my trusty FT-50R.

I found that it was very easy to program using the software, and it was easy to use the VFO's and even to set the tones.

Nobody's answered me yet, but I think it's working.

I'll try to remember to bring it to the club picnic next month. Meanwhile, if anybody wants to see one, come on over. I like it enough already that I have ordered a second one as a present for a family member who has no handheld. I am considering ordering the 2 meter/222 Mhz. version as well, so I can work the 3 guys in town on 222 simplex.

Bill:

I have owned four Wouxun KG-UVD1P radios since earlier this year. I LOVE this radio. I consider them disposable, should something happen to one of them. I have three of the UHF splits in my four radios: 400-480, 420-520 and 216-285.

The nice thing about this radio is that it's type accepted for FCC Part 90, so it can be used on commercial frequencies, too. However, for what it's worth, it is not type accepted for Part 95, so it cannot be legally used on FRS, GMRS or MURS channels.

I used my KG-UVD1P during the Sunday night net in Rochester a few months ago and I had a decent report on the audio.

You can't go wrong with this radio! P.S.: QST is planning a review soon and there is a mobile version of this radio expected to come out soon, too.

If you're on Facebook, check out my Wouxun page there at http://www.facebook.com/Wouxun

Excellent idea.

I am personally conflicted about all of these federal grants as my question is "Do we really want to add to the debt that our children have to pay off someday by participating in the grant program?"

Why don't we just raise the money locally through our tax exempt club status and pay for stuff ourselves?

When we spend our own money we spend wisely.

John Scott did this a few years ago and it was very successful.

From: Bill
Topic: 673 Message: 673

I sent this out to my EC's this morning:

It is my great pleasure to announce two new EC's and a new Assistant DEC in MNARES District 1.

First, BJ Watts, KC0NPF, bjw@... is the new EC for Dodge County. BJ started with the Rochester club many years ago, when he was just a kid. BJ has been our 'point man' for SKYWARN in eastern Dodge county for a long time, has been involved in dozens of non-emergency public service events, and he brings with him a lot of energy and ideas.

Paul Spevacek, KD0KRX, prospivy@yahoo.com is the new EC for Nicollet County. Paul is new to ham radio, but he has jumped into it with a lot of energy and a particular interest in emergency comms. He is involved with the Makato Radio Club, and has participated in a number of public service events in the region.

Finally, Bob, AB0BW, (hey Bob - your email isn't working!)has accepted a promotion from Olmsted County EC to Assistant DEC. Bob is going to take the reins of driving some technology projects in the district. He is going to investigate and document ways that we can provide better communications in the district. The first thing I've asked him to do is to ensure that we can help the Red Cross HQ's in the district communicate with their remote shelters, particularly across county boundaries. He's also looking into promoting repeater linking and digital communications in the district.

From: Bill
Topic: 675 Message: 675

A little knowledge can be a dangerous thing.

I finally got a decent 2 meter vertical up last weekend, and I've been having fun with it since. There are reasons I try to buy houses on top of hills, and this is one of them.

Under normal conditions, I can work the Faribault and Hampton 2 meter repeaters. The Faribault machine covers the southern half of the TC Metro area pretty well, so it should not be that hard to work into the metro. I've been able to get into the White Bear Lake 146.85 machine all day and tonight so far - and the Mankato ARES net is pretty loud right now. The White Bear Lake machine has remote receivers spread over quite an area, so you can key it up even if it's hard to hear.

But, I've been listening in on local nets around the area, and there are a few things I think we might use to boost activity here.

I notice that several of the local nets play the 'Amateur Radio Newsline'. I started doing that on the 147.255 repeater here prior to the Sunday night net on .82, but, I didn't get any feedback, so I don't know if people found it interesting or annoying. It's a half hour report, usually. It's not tough to do - I've got a rig I can dedicate to it. I'd prefer not to put this on .82, and putting it on .255 probably covers a slightly broader area.

I checked into the LaCrosse net this evening, and after they do the normal 'net' activities like we do, they have an informal 'swap and shop' on the air. We talked about doing this some time ago. Would people like to see this added to the Sunday night net? It might encourage folks with a surplus of radio gear (if it's ever possible to have a surplus) to share their junkbox with less well equipped hams.

So, what can we do to jazz up the Sunday night nets so that everybody with a ham ticket in Rochester won't want to miss it?

I like those activities. Also including a discussion of what people are doing hom radio like projects, kits, etc. People could ask questions see if anybody have any books, supplies, gear that could help. Kind of like and on the air swap, also elmer component. I personally learn a lot from pooling ideas with people. Sometimes simple things like what guage of wire is good to use for various antenna projects for example. In know, something simple and common sense, but some just some thoughts.

Just a reminder about our RARC picnic tomorrow afternoon at Essex Park. Bring your own beverages and something to pass. Coals start at 5:30, cooking at 6:00.

Also, I recall from the last meeting that someone volunteered to bring their charcoal grill, I think it was Steve, w0stv. Could someone give him a call today and ask him if that was the case. My emails don't go through and I haven't unpacked and charged my radios from my vacation I just got back from. Thanks.

Also if there is anyone else that has a charcoal grill they could bring, that would be good also.

From: Bill
Topic: 680 Message: 680

This is something I picked up from the Winona Radio Club's newsletter:
http://mikewren.com/n2qdk-9

The combination he's using, Garmin Nuvi 350 GPS, Garmin FMI Cable, and Argent Systems Tracker2 OTM2 looks like it will give you a lot of capability for fairly little money. I found the Garmin GPS in question on the web for $110. The FMI cable looks like it can be had for $29. The Tracker2 OTM2 is around $100, depending on the package you choose.

I wonder how much of that Nuvi function would work with another APRS radio solution, like a D710? I see that Argent has a 5 watt APRS radio with the OTM2 in it for $299.

I don't do 'texting while driving' on APRS or cellphones, but the Garmin interface used for sending messages looks neat.

I found the Garmin GPS in question on the web for $110. The FMI cable looks like it can be had for $29. The Tracker2 OTM2 is around $100, depending on the package you choose.

I wonder how much of that Nuvi function would work with another APRS radio solution, like a D710? I see that Argent has a 5 watt APRS radio with the OTM2 in it for $299.

I don't do 'texting while driving' on APRS or cellphones, but the Garmin interface used for sending messages looks neat.

The reality is, if you have a cell phone, a computer with wifi, hit tx on your radio, have OnStar in your vehicle, and who knows, probably all new vehicles have this anyway, we have a way to be tracked.

684. 146.82 Radio Reference feed

Yahoo group: rochester_hams
Date: 2010-08-15 04:45:31 UTC
From: kc0fow
Topic: 684 Message: 684

I was checking the stats on the feed for the 146.82 repeater and they recorded 24 users accessing the feed from 5pm to 6pm on Friday.

Clearly, they were looking for Skywarn and not whatever was going on at the time on 82, so if we ever do get someone willing to put 255 on Radio Reference, chances are it will get used during Skywarn if something important is happening.

As an aside, I also noticed that there are a few who tune in between 9pm and 10pm on Sunday nights. There were four last Sunday.

685. Any basic 2m FM mobile rigs for sale?

Just got around to reading the rochester-hams group for the first time in a long while. The aprsandroid app seemed interesting.

I am new to smart phones, but decided to try the aprsandroid app. I downloaded the slide-me app and opened an account. Then I downloaded the aprsandroid app using slide-me. I installed aprsandroid OK, but have a lot of questions about setting it up properly. I understand I need to get a passcode to get into the internet server I chose. Bob, or anyone who has installed aprsdroid, what internet server did you used? What SSID did you use (10:APRS-IS (no radio))? What should I use as the aprs symbol, is the default /$ OK. What should the status message be? What would be good values to use for minimum update time and mimimum update distance? Any recommendations on neighbor radius? What should the connection protocol be (UDP(port 8080) or HTTP POST(URL))?
Sorry for all the questions. But I don't want to screw things up on APRS.

There are also a couple of other apps I found:

Amateur Radio Call Log - basic ham radio logging app. It stores Date, Time, Station, Frequency, Mode, RST, and comments. Can look up callsign information from the FCC database.

Ham - Solar Conditions (Solar Terrestrial Data, Calculated Solar Conditions,VHF Conditions), Callsign Lockup - need a QRZ sign in

691. Vertical Antenna Design Help?

Yahoo group: rochester_hams
Date: 2010-08-30 20:12:31 UTC
From: Niel - W0VLZ
Topic: 691 Message: 691

As I look forward to cooler weather I've starting to think about 80 meters. With the winter months 80 becomes quieter and a better band for "DX". I'd like to put up a better 80 meter antenna. Right now my endfed wire is only 10'-15' off the ground. If works OK for Minnesota but not much else beyond that. The radiation angle is too high.

I can put up a 25' to 30' 80 meter vertical and even top load it a little. Can anyone with some antenna design modeling tools help me with loading coil size and placement?

tnx es 73,
Niel - W0VLZ

The ARRL Antenna Book has some design info.

A base loaded 30 foot vertical will have about three times the efficiency of a 20 foot one on 80 meters, so the longer, the better.
A top loaded one will be about twice as efficient as a base loaded one.

A helically wound vertical half the normal size - 33 feet on 80 meters - would require about 1/2 wavelength of wire - 132 feet - to achieve resonance as a 1/4 wave vertical.

There is a chart in the book that gives the required inductive reactance for shortening a dipole a given amount. It yields the inductive reactance required on each side of the dipole, so I will assume that it will also work on a quarter wave monopole.

For an antenna 50% the normal size, a coil in center of the antenna, halfway between the feed and the end, would require about 950 ohms of reactance at the frequency in question.

For a coil 90% of the length of the antenna away from the feed point (top loading) the reactance would need to be 4000 ohms.

I'm installing the CD ROM that came with the book. If I find any handy software on it, I'll let you know.

One of the programs included on the CD is an old DOS program called 'Mobile'. It can be used to calculate the loading coils for mobile antennas up to 50% the size of a quarter wave vertical, either mobile or home station.

I ran a few scenarios:

3.5 Mhz., 33 foot vertical with loading coil at 30'
... 3" diamter coil, 11 " long , 14 AWG , 8 turns/inch - 87.6 turns
-- this design had an 'unreliable Q'-- increasing the coil diameter and adjusting the turns accordingly might help

3.8 Mhz., 20 foot vertical with loading coil at 10 feet
...3" diameter coil 5.3" long 14 AWG 41.9 turns 8 t/in.

You could significantly improve the efficiency of the 20 foot antenna by increasing the diameter of the coil. The maximum improvement comes at a coil diamter of 5.25" , but at 4" it's almost as good -
4" coil, 3.6" long, 28.3 turns 8 t/in. This results in a Q of about 600.

Let me know if you want me to run any other scenarios for you.

I assumed a mounting height of 1 foot and a ground loss of 1 ohm. I assume the formula they're using uses the ground loss to calculate the efficiency of the antenna and it does not affect the dimensions.

694. General class in Winona

Yahoo group: rochester_hams
Date: 2010-09-05 17:13:13 UTC
From: Bill
Topic: 694 Message: 694

At the risk of making it obvious that I haven't finished our class yet, I want to pass on the information that a General Class course will be taught in Winona on Monday evenings Oct. 4 through Nov. 8. Here are details from the Winona club newsletter:

"General Class license course to run from early October 4 to mid-November 8. The course will be conducted Monday evenings from 6:00 to 9:00 PM. A license testing session will be held on November 15. The course is intended for persons who currently hold a Technician Class license and wish to upgrade to General Class.

The course fee of $24.95 is payable at the first session and includes a copy of the ARRL General Class License Manual and other materials. In addition, the cost for license testing is $15.00 to be paid with advance registration by October 17. The course and subsequent license testing will be held at the Bluffview Montessori School, 1321 Gilmore Avenue Winona, MN. The license testing session is open to candidates for all classes of licenses Technician, General, and Amateur Extra.

Interested persons should register for the course no later than Sunday, September 26 by contacting Len Litvan at KC0RSX@... <mailto:KC0RSX@...> or by phone at (507) 643-7526 so that course materials can be ordered.

More detail will be posted on the W0NE website, www.w0ne.org.

73,
Len LC0RSX"

697. ARES Portable Repeater

Yahoo group: rochester_hams
Date: 2010-09-12 18:17:16 UTC
From: Bill
Topic: 697 Message: 697

Here is the info on the portable repeater that's available from the state ARES team in the event of a disaster:

"Hi Folks Just thought I would pass on to you that Emergency Management had some Homeland security grant monies availabe. We used it to purchase a portable repeater with power supply in a peliguin case. There is a 32 ft mast and a diamond x-50 antenna that goes with it. I also have 100' of lmr400db. This setup will be available for use anywhere in MN in the event of a emergency.

It has a large split to make it lighter and more portable. The frequency input is 147.585 PL 141.3 and the output is 144.930 PL 141.3. Please pass this on to your ARES members so that they can program their equipment incase this repeater needs to be used. Just give Dan Anderson KD0ASX a call and he will deploy the repeater. I have the repeater and Dan will instruct either you to call me or he will notify me as to where it needs to go.

This is a great asset for Ares members in case of an emergency. The only thing we do not have for this equipment is a portable generator, but in most events there is a generator or shore power available. When I get the mast done it will have a ground foot print of 40 foot circle for staking the guy ropes out.

Dan I also included Mike, Ann, Jerry and Bill in this. Hope that was ok with you.

Thanks
Arl Weinrebe KD0BJW
District 5 EC "

Note that the input frequency is Olmsted County's 'Alpha V' with a PL of 141.3. The output, however, will have to be programmed in as a non-standard split.

While I'm on the subject, once again, there is a statewide list of standard frequencies, which is not the same as those we've designated in Olmsted County. It includes a number of things - including packet, DSTAR, and HF. Here's the URL for the document: http://www.minnesotaares.org/files/SOP%25206-C-001%2520Simplex%2520Frequencies(1).pdf It might be a good idea to print that off and have it available.

Topic: 699 Message: 699

Does anyone remember the MARS equipment that Bob Rossi/AB0OTF would have used? or know of someone that might?

Some of Bob's gear ended up at the Olmsted County Historical Society and they are trying to figure out the story.

73,
Niel

700. DSTAR Repeater

Yahoo group: rochester_hams
Date: 2010-09-15 22:17:13 UTC
From: Bill
Topic: 700 Message: 700

Well, last night's meeting was interesting to say the least! I'm looking forward to having a new digital thing to play with soon, and I think it will eventually be a big advance for us.

I can agree with the concern about DSTAR becoming the ham version of BetaMax, but I think at this point, there is enough DSTAR out there that the users would have to be accommodated in some fashion. There's nothing to prevent another manufacturer from coming out with a product that follows the DSTAR standards, but uses a different CODEC. So far, we haven't seen it, and I don't think we will unless the Chinese get into the act. I would think they'd be more inclined to 'reverse engineer' what's there, anyway.

Someone asked about APRS. The current crop of DSTAR radios will do something called 'DPRS' which is the equivalent of APRS. There is an interface between DPRS and APRS-IS, and most DSTAR repeaters are set up for it. So, I think if you have your radio set up to do DPRS, it can send your APRS-like data through the repeater to the Internet, where the gateway to APRS will reformat it and send it back out as an APRS packet. I think the DPRS runs in the background on the radio - you can transmit voice and data at the same time. So, at least in range of a DSTAR repeater, I think we might still be able to do APRS.

I think the biggest trick in DSTAR's bag is the ability to find people by callsign wherever they are in the network. So, if you program in the DSTAR repeaters when you're travelling, you should be able to talk to others here like you were in town, no matter where you are.

701. RE: DSTAR Repeater

Yahoo group: rochester_hams
Date: 2010-09-16 17:41:25 UTC
From: Bill
Topic: 700 Message: 701

Hmmm... my email is kaput this morning - I'd blame it on a security fix from Microsoft,but I can't connect with any of my mail clients, so I will assume the server is down for now.

I did receive a private email with some additional concerns about DSTAR.

Yes, you will need a DSTAR radio to use this repeater, or, a less expensive way would be to get a DSTAR DONGLE. The DONGLE is a $199 interface that plugs into your computer, and lets you connect to the worldwide DSTAR network that way. Assuming our DSTAR repeater gets an Internet connection, this would be a viable option for many. The nice thing about the DONGLE is that you can take it with you wherever you go, and check into our DSTAR machine from any location where your laptop or netbook can access the Internet.

The cheapest currently available radio that would do it is the ICOM U82 - a monoband UHF rig. The radio is $149, BUT, you have to buy the DSTAR adapter for it, which is $219. For not much more, you can get the dualband IC-80AD with DSTAR built in for $439 (today's Universal Radio Price). I'm looking at a mobile rig, myself, and the ID-880 looks like the only real contender.

Since we're buying the repeater from Radio City, I think we should ask them if they'd consider a group buy for the club, either a standing discount on DSTAR gear for RARC members, or give us an opportunity to pool our orders for a number of radios. I would wager that if they won't do it, someone else will.

This Wiki article has a lot of information and good links:
http://en.wikipedia.org/wiki/D-STAR

Note the different projects for converting other radios to DSTAR. If you have an experimental nature and a 9600 BPS capable analog radio, this might be for you.

As for converting this repeater to analog in the future - I don't think that's too likely. The club is getting the repeater for free. What we're buying is stuff we'd need if we were putting up any kind of new repeater. If we decide some day that DSTAR isn't the answer, we could replace the free DSTAR repeater with an analog machine.

And, I don't know what Dave has in mind for the old UHF repeater, but if he wants to put it back on the air, I can think of at least three nice high locations where it might go, including my garage. If he put it on the same repeater pair with the PL on, I bet it would coexist with the DSTAR machine in a different location just fine.

There is another UHF repeater in town, too. KG0BP has a low level machine that covers at least the north half of town, and I think it's still on the WIN network.

As it is, we have a defunct UHF repeater that was not accessible from large parts of town, anyway. There were only a handful of us who used it, and it went down several times in recent years, and nobody noticed. We're hoping for a new location that should have coverage similar to the .625 machine, and an Internet connection. If we just forgot all about the digital voice capability, this would be attractive for emergency digital data capability.

As a bonus, those with radios or DONGLEs can use it to talk to other DSTAR users all over the world.

Will this be a new repeater on a new frequency?

A semi-active ham friend here at IBM would like to get back on 2m FM.

We just verified the 2m radio he got via donation has no RF output. If anyone has a 2m FM mobile rig that at least has the squelch tones (either gathering dust or you want to trade up for DStar etc) let me know and I'll get you in contact for further discussions. 73 Dave K0VH

Well, that's quite a user name. We can use people with lots of digital background.

I'm afraid there isn't a class scheduled. The question pool for Technician Class changed this summer, so our classes needed a rewrite.
I've been working on trying to turn it into a self-study course for both the Technician and General license. I'm on Chapter 2 of 8. The good news is that Chapter 2 is the biggest one requiring the most changes. So, once I'm done with that, it should be downhill fast. I'm aiming to have it class-ready by spring.

Meanwhile, you can study on your own, and feel free to ask us questions as they come up.
You need a copy of the ARRL Ham Radio License Manual. Last time I looked, Barnes and Noble at the mall had one on the shelf.
Also, you can find the foils for our old class on the club website - http://www.rarchams.org/classes.htm - some new material has been added, but there's nothing in this that will mislead you, either.

You can also do self-tests online to practice for the tests.
http://www.qrz.com/p/testing.pl The QRZ website has practice tests for free. I've seen people do those practice tests about a zillion times to memorize all the questions and answers. It's MUCH easier to read the book and actually learn the material!!!

Good luck and let us know if you need help!

I believe the plan is to put the new DSTAR machine on the old analog UHF frequency. Meanwhile, KC0UCN has the old UHF repeater on the air, and he intends to move it to a new frequency pair.

Has anybody got any connections to anybody in the Rochester Fire Department? I am looking for someone to do a presentation this coming year on haz-mat awareness for volunteers like us and using the Emergency Response Guidebook. Ideas??

Thanks,
Rodney kd0ebt

733. Homebrew soapbox....

Yahoo group: rochester_hams
Date: 2011-01-04 21:04:50 UTC
From: David Donovan
Topic: 733 Message: 733

Folks,

If a homebrew project isnt on your resolution or to-do list for 2011 - by all means consider one!

I'm almost done with an amp project (audio) that really has value (to the builder) well beyond the test bench measurements that could be made.

Point being - sure - you could be king of the town with the latest/greatest transceiver - but contacts might be much more meaningful with something you made/designed by yourself.

So....let homebrew be for U!

Here's some pics of my project - 3+ years of design, too many headaches to count, and a ransom in expense - but - there's only one in the world and like the mastercard commercials (priceless) - find your own priceless piece of equipment in your shack via homebrew!

http://tsmrockets.com/images/300B_SRPP_1.jpg

David,

Homebrew is yet one more way to have fun doing ham radio (and it looks like you are doing some great homebrewing).

I second the idea to make a ham radio related New Year's resolution. There are many areas to choose from and if you need help we have lots of it right here in Rochester. Take a look at http://www.rarchams.org/resource.htm

If anyone ends up with vintage homebrew (especially a tube HF CW transmitter) on their list, I'd be glad to help.

73,
Niel

735. Brief Report

Yahoo group: rochester_hams
Date: 2011-01-06 19:40:34 UTC
From: Bill
Topic: 735 Message: 735

I've been travelling since just before Christmas, and it's been fun. I'll be back in Rochester in a week or so, but I'm not in a hurry yet.

I'm very happy to report that ham radio is very much alive and well from Kansas to California. I was very impressed with the level of activity in Colorado. I even worked some 'DX' on 146.52 from a roadside stop down in the valley just above Boulder - I stopped and threw my call out a couple times, and worked three people in short order, one in Boulder, one in Ft. Collins, and another about 20 miles northwest of Cheyenne, WY - a distance of about 80 miles.

In New Mexico, Arizona, and all over California so far, I've been on linked repeaters with lots of activity. Even on a back road in northeast AZ, in the Navaho Nation, I was hearing people. Out here, it's mostly IRLP or RF links, and it looks like IRLP is exploding. The WIN System in California let me talk to my brother in San Jose from all over the place.

I haven't really done much with the HF rig yet - too much to listen to on VHF and UHF. I'm planning to go home via some desolate areas, so I expect I'll be using the HF rig more. I did use it in Iowa and Missouri, because I found very little VHF there. Kansas City used to have lots of activity, but I did not hear a peep. We need an 'I 35' network to combat that, I think.

I was going to send you to Amazon.com, but I see there's a problem on their web page. They want $151 for the current General Class book! Amazon usually has them much cheaper than buying direct from ARRL. ARRL wants $29. Amazon did have the General Class Q+A manual used for around $7. You want the 6th edition if you are going to take the test prior to June. If you will not be taking it until after June, you want to wait for the next edition, since the question pool has now changed.

I have a copy of the book, but I'm using it to rewrite the club's Tech Class. I intend to include most of the General Class info in the new Tech Class, since most of it is just a little more info than needed for the Tech. If you want to borrow it for a couple weeks and get it back to me, that would be fine.

I also see that Rodney was looking for somebody going to Radio City this weekend. If somebody is going up there, they could get one for you, too. There should also be one at the downtown public library, thanks to the RARC.

Scott, this is actually my second HF rig. I started out with a IC-703+ for my qrp work since I love doing portable ops. This 706 will give me more power without the amp, but also I got it for the 2m and 70cm ssb/cw. I did the vhf sweepstakes last weekend and had a blast. As for my HF antennas, as I also am looking for portable options, Niel, w0vlz built a 20 meter c-pole design that works the same as a vertical without the need for ground radials based off of Brian Cake's kf2yn design ideas. I live in an in ground apartment and have no real estate for antennas. BTW, how is your newer antennas working for you??

My new antennas are working very well. They are simply amazing especially the Force 12 c-49xr at 100 ft. I actually hear stations on the band earlier in the day and later in the night than I did with my tribander at 50 ft.

I had a vertical for several years and found a simple 20 meter dipole worked equally well. You could put one up high in the trees at your complex and run rg8x underground into your apartment.

If you like contesting and are looking for any help or advice, I encourage you to join the Minnesota Wireless association (www.w0aa.org). It is a contest focused group of hams where the best contesters I know are always offering advice and insight. There are several VHF contesters in MWA. Did I mention the dues are free?

Good dxing and contesting this season

753. Technician Class Scheduled

Yahoo group: rochester_hams
Date: 2011-02-17 15:27:23 UTC
From: Bill
Topic: 753 Message: 753

OK - I have reserved the West Room at the Red Cross Building for 2 consecutive Saturdays in April, 4/16 and 4/23. Those dates should work well with the planned VE test session in May.

Pass the word!!!

The class is $25, and students need to obtain a current copy of the ARRL License Manual prior to class. The book can be ordered through ARRL directly, or through Barnes and Noble or Amazon.com, and should be in stock at Radio City in Mounds View.

I would prefer that students contact me at 252-5852 at least 1 week prior to class, so I know how many to plan for.

This is a Technician class, but I intend to cover some of the main topics for the General Exam, as well, for those wishing to study for both tests at the same time.

As always, if there is a group of 3 or more people needing a class at any time, they can contact me and we will make arrangements.

Thanks

We're not doing an Extra class, but they give the Extra exams at the VE sessions. I think our next VE session is in May, but there are VE sessions in the Twin Cities and other places several times each month.

We've done General classes in the past, but not Extra. If somebody out there wants to put one together, I'd be glad to help, but my plate is full with what I'm doing.

Yes, that's the right one. It's probably a good thing you asked, Amazon does seem to have a lot of outdated versions of the ARRL books, and some people will see the prices and assume it's a big bargain.

I don't have you on my list, yet, Jim. If you are planning to attend our class, drop me an email at (my call)@... . I just want to have an idea of how many to plan for.

Thanks

758. HR 607 threaterns 3/4 meters

Yahoo group: rochester_hams
Date: 2011-02-23 16:09:51 UTC
From: Bill
Topic: 758 Message: 758

HR 607 threatens to turn our 420-440 MHz band over to commercial users, to "compensate them" for the loss of the 700 MHz. spectrum that the bill would give to first responders. Of course, they don't have 700 MHz. now, but we have to compensate them for it anyway. Money talks...

That would effectively wipe out ATV, satellites and weak signal work on that UHF band.

Write your congresscritter! I've already lit up Mr. Walz' email - let's send him many more!

http://www.arrl.org/news/arrl-asks-members-to-write-in-opposition-to-hr-607

It didn't take the new crop of congresscriminals long to sell us out, did it?

This is the most serious threat to our frequencies that I've ever seen, other than possibly BPL.

I see no evidence that the new crop of members of Congress has "sold out". In fact the chair of the subcommittee dealing with his is in all likelihood Rep. Greg Walden of Oregon. Greg is a ham and we exchanged qsl cards at the first of January. He will watch out for Han radio I think as he balances the public good with our needs.

I do agree with you Bill that we should write Rep. Waltz as well as all of Minnesota's delegation.

Thanks for keeping us posted.

I wasn't necessarily referring to the new majority, Scott.

This is a bipartisan bill - our own Sen. Klobuchar is a cosponsor of the Senate version of the bill. She needs to be high on the list of people to write to. ARRL has a letter-writing campaign. If you send your letter to their Washington counsel, it will be hand-delivered to the representatives.

The bill will auction off the 420-440 segment of our band "to compensate" commercial users for the loss of part of the 700 MHz band that was recently vacated by TV broadcasting. I don't see how AT+T and Verizon had a claim on those 700 MHz frequencies in the first place, so 'compensation' doesn't seem due. I don't know what the commercial users really gain from it - 400 MHz. is not attractive for cellphones.
It might be useful for RF-based Internet service. Someone must have something in mind.

I'm not sure I've ever really used the 420-430 MHz segment except for ATV. 430 - is a different story - I use it all the time for satellites, and weak signal work. Most of the world doesn't have the 440-450 MHz. segment, including Canada and U.S. hams north of Duluth.
If I had to give up a segment, it would be 440-450, not 430-440.

I believe it was Will Rogers that said "No man's life, liberty or property is secure as long as Congress is in session!". He was a very wise man.

I'm looking for people to try digital stuff on 2 meter FM, and possibly other places.

In particular, I'm interested in using the components of NBEMS - FLDigi, FLARQ, FLWRAP and FLMSG. MT-63 is also popular with some ARES groups, and I know they are using it with parts of NBEMS.

Bob, AB0BW, and I were playing with it last weekend, and he could copy my MT-63 just fine, but I had a hard time with what he was sending. We were able to do PSK with no problem. We didn't try any of the other modes used for NBEMS, like DominoEX.

I'm using a soundcard interface on my TM-D700.

Speaking of soundcard interfaces, I ordered two kits for the simple one that's in this month's QST, from Skip Teller, KH6TY. Skip is the author of some popular digital modes, and parts of NBEMS. His interface does not use com ports to do PTT - which can be a bit of a hassle. Instead, it uses the audio out of the soundcard to key the PTT. He sells a kit for about $30, or the bare borad for $7. The kit includes a cable with the standard mini-DIN plug that most rigs these days have on them.

I ordered two kits for myself, even though I have an abundance of digital interfaces. I am starting to run some of these programs from 'virtual PCs' and COM ports are difficult in that environment. I'm also running three different OS's on my system, and I'm planning a 4th (Apple Snow Leopard will run under VMWare, too). But, I mostly want to have these 'universal' interfaces around in case we need them for ARES. I plan to buy more boards and build a few more over time, though it would be easy to build the interface without a board, too. There are only about 10 parts in it.

If you want to order one of those interfaces, but aren't confident about building it, I'll be happy to do it for you, or show you how.
It would be great if we had these things hanging around in case we need them. Maybe we can start using them for SSTV on 2 meters again.

Bill, I will give the NBEMS a try with you and Bob. I have it loaded on my computer, and the radio and interface between my computer and the radio. I just need to get my computer configured. Maybe we can set up a time and I can bring my stuff over and we can get it set up. then I will go out and use it mobile (parked of course).

OK, Rod - I should be around this weekend, and next week, then I'll be gone for a week or so - going to miss the March meeting, I'm afraid.

Please download the latest version of FLDigi and the other parts of NBEMS. I still don't understand why I couldn't copy Bob - I suspect one of us has a soundcard issue, but MT-63 is supposed to work better than that with all kinds of mismatches.

Rodney

It was great seeing you at breakfast.

I would be happy doing a program. I thin there are two possibilities:

1. Operating hf from an overseas hotel - combining work and pleasure.

2. Designing antenna upgrade- what does it take to be a big gun station?

I would prefer number one as it is more fun.

Please suggest some dates. April might work as might May.

Could somebody bring a newbie up to date. I thought hams only used a part of that spectrum and that it is actively used by handhelds.
What is the rest of it used for?

If I was to write a letter to a congressman what are the key arguments to make? I know that saying "I don't like it" doesn't go far.

I also looked up the bill and see Keith Ellison from MN is signed on as a sponsor. He seems to be a pretty common sense guy although not technical. He might be a good candidate for letters that educate him.

His interface does not use com ports to do PTT - which can be a bit of a hassle. Instead, it uses the audio out of the soundcard to key the PTT. He sells a kit for about $30, or the bare borad for $7. The kit includes a cable with the standard mini-DIN plug that most rigs these days have on them.
>
> I ordered two kits for myself, even though I have an abundance of digital interfaces. I am starting to run some of these programs from 'virtual PCs' and COM ports are difficult in that environment. I'm also running three different OS's on my system, and I'm planning a 4th (Apple Snow Leopard will run under VMWare, too). But, I mostly want to have these 'universal' interfaces around in case we need them for ARES. I plan to buy more boards and build a few more over time, though it would be easy to build the interface without a board, too. There are only about 10 parts in it.

>
> If you want to order one of those interfaces, but aren't confident about building it, I'll be happy to do it for you, or show you how.
> It would be great if we had these things hanging around in case we need them. Maybe we can start using them for SSTV on 2 meters again.

Steve, I work late shift so I will not be able to make the net tonight. As for my interfaces, I use a Rigblaster NoMic for my IC-703+ and 706mk2g and for my FT-7800 (VHF/UHF mobile rig) I have a Tigertronics Signalink USB. Both of these have the cables that you can order that are the right cable for the right radio. The Signalink USB also makes plugin jumper modules so you easily change out jumpers as you change transcievers (as long as you have the correct chord for the transceiver).

Bill, there is an Android App called "Ham Radio Study", that has the pool of questions. It goes through the questions and scores your answers. It doesn't show any graphics so questions that refer to a diagram can't be answered. Some one might want to use it to practice taking the exam.

From: Bill
Topic: 764 Message: 774

Sorry I was out of town for the Monday Tech Net last week. How did that go?

I received the DVD from the ARRL Atlantic Division 'NBEMS Update'. It arrived with the case broken neatly in half, but the DVD looks OK. This would be a good tool for people wanting to learn more about how NBEMS works, and I'm willing to pass it around. If there's enough demand, I can order more copies. I don't think they're making any money on these, so I will email them and ask if it's OK for us to copy it.

I also received the two Skip Teller KH6TY interface kits I ordered. If time permits, I hope to get those assembled sometime this week. I think it will take longer to find my workbench than it will to build the kits.

If these work as well as I expect them to, this is something we will want to have available. The interface should work for any soundcard mode, with the possible exception of CW, though I think with a little effort it could be made to work for that, too. It should work with any radio, though those with the standard min-DIN connector should be easier to interface.

As for the various different EMCOMM digital modes - I see a place for several of them in our environment. NBEMS is the current hot ticket for 'outstate' Minnesota and many other places. It is easy to deploy, and will do a credible job of sending text messages. However, using MT63 protocol, which seems to be what most groups are pushing, it isn't fast enough to send binary objects, like PDF files, and does no data comnpression. NBEMS will run over some other protocols that are much faster, and can be used with FLARQ to do error free transfers. That's supposed to make it practical to send binaries.

However, NBEMS will not make use of any kind of infrastructure. It won't run on Packet, so it won't run on the statewide packet network.
Here in Minnesota, we do have the packet network resource, and we should be able to take advantage of it.

We can use the AGW Packet engine to do packet radio over soundcards, so the same soundcard interface can be used there. There's a nice packet based messaging application called OUTPOST. It's primarily an email program. OUTPOST requires a packet mailbox or BBS somewhere in the network, and you can have multiples of them for backup.

W0STV also pointed out a program called 'EMCOMM OPS' which is a commercial package that looks like it will do it all. But, it's not clear if it will work on soundcards. Perhaps we should download the sample code and find out?

DSTAR will be another option in the near future, too. There is a do-all EMCOMM package called D-RATS that runs on DSTAR.

I got a call from Dave Marshik in Plainview, yesterday.

Dave has a working tube tester and a large quantity of old vacuum tubes available for the taking. Some of the tubes are new, some are used.

Call Dave at 534-3719 if interested. I told him I'd take them if nobody else did.

776. MS-TRAM Bike Ride July 25-29

Yahoo group: rochester_hams
Date: 2011-03-22 16:05:38 UTC
From: Bill
Topic: 776 Message: 776

This year, the Star Tribune's 'The Ride Across Minnesota' will start and end in Rochester. This is a 300 mile, multiday bike event with an anticipated 1,200 bikes involved.

We are being asked to help provide operators and possibly gear for this event. A total of about 20 operators will be needed each day of the event.

The course starts in Rochester, then makes overnight stops in Owatonna, Austin, Lanesboro, Winona, and then the event finishes back in Rochester.

The plan is to use two meter and UHF FM, as well as APRS. They are planning to have the net control at Ironwood Springs. The toughest part of the course for us to cover will be down in the river canyon between Rushford and Winona.

For more information, and to register as a volunteer (required), visit www.ms-scram.org , or contact the event coordinator, Gordy, N0ZRD 763-302-0018. You don't need to volunteer to help the whole week - if you just want to help when the ride is in your area, that's great, too.
I'd appreciate you letting me know if you will be volunteering for this, too (k0rgrATarrl.net).

I think this is a great opportunity for us to really test our ability to provide communications all over the southeast region!

Sorry - I put the date in the title - July 25-29. This is a Monday-Friday.

779. Flood Preparedness

Yahoo group: rochester_hams
Date: 2011-03-22 21:56:13 UTC
From: Bill
Topic: 779 Message: 779

Generally, ARES doesn't get involved with floods much, but there is potential for us to be needed this spring. FLoods are usually slow to develop, so communications are usually not affected for long, but that is not always the case. A flash flood or unanticipated disaster like in Rushford in 2007, can create a need for us to step in at any time.

Also, many volunteer organizations have no communications capability of their own, and ask for assistance from ARES. This is usually involved with relief work after the flood.

This year, in Southeast MN, we've been advised that hams may be needed to monitor river levels in Olmsted County. There is a strong likelihood that volunteers will be needed on the Red River as they were in 2009.

So, this is the time to make sure that your 'go' kits are ready. In addition to radio gear, you need to have everything you will personally need for 2-3 days, food, drink, medicine. There are lots of 'go-kit' lists on the web.

We are not looking for volunteers at this time, but that could change at any time.

Thanks

ARES is much more than just em comm. If you need an extra hand for anything, I'm your guy. Ready, willing, and able to do what it takes for search and rescue, sandbagging, traffic directing, em comm (of course), towing, hauling, anything.

In no way am I trying to undermine anybody's position with the following:

I've always believed - and still do - that you don't necessarily have to wait for ARES or other organization to call for help. You can always pitch in, in any capacity that's needed.

I can give you an educated guess. I did a count, by county, of the hams in MN ARES District 1. ARES District 1 contains the eastern half of Congressional district 1 plus the southern half of Congressional District 2. Most of the hams in Congressional District 1 are in ARES District 1.

I found 1,718 hams in my district. Most are in Olmsted, Winona, Blue Earth, Steele, and Rice Counties.

As for alternatives, first, the bill proposes to replace 10 MHz of radio spectrum that was 'promised' to the commercial interests but never actually occupied by them with 20 MHz. of spectrum that is currently shared between the Military, Amateur Radio, and a slew of unlicensed radio services, including the RFID tags used by all big retailers.

While we'd prefer not to lose any amateur spectrum, and the 420-430 MHz. segment is used for Amateur TV in support of many public service functions, including Rochester's Polar Plunge, the 430-440 MHz. band is the only portion of this spectrum that is recognized as an Amateur allocation around the world. Most of our orbiting amateur satellites have input frequencies in this range, and they cannot be moved, so the satellites would be rendered useless over North America.

Further, this part of the band is used to link terrestrial repeater stations, which are used for public service and emergency communications in many parts of the country. Linked systems in several western states depend on these facilities, which would be very difficult to replace.

The first alternative would be to preserve the 430-440 segment, and replace the 10 MHz. segment being dedicated to first responders with 10 MHz., not 20 MHz.. of spectrum. Amateurs should be granted Primary status from 430-440 MHz. to compensate for the loss of the lower 10 MHz..

There is a strong likelihood that ARES volunteers will be needed to help in the Fargo area sometime this week. In past flood events, ARES has provided needed communication for all of the other volunteer organizations involved in the sandbagging/relief efforts.

The latest information on the callout can be found here:
http://www.minnesotaares.org

This is what it says this morning:

Welcome to the Minnesota ARES Website!

Minnesota ARES Section Activation Status Board

Pre-Notification call-out implemented.
No Section-level activations at this time.

4/4/2011
Minnesota ARES District 3 will be requesting activation of ARES personnel to respond to the Moorhead and Fargo areas for flood fight duties sometime within the next 24-48 hours. Upon activation, Minnesota Section leadership will coordinate all volunteer-recruitment activities for Minnesota ARES personnel. More information will follow upon official word of activation.

Lodging will be provided. Minnesota and North Dakota will be adhering to the Minnesota Section Standard Operating Frequencies Plan, as well as local repeaters, and can be referenced in more detail at www.W0ILO.com.

Now's the time to get your go-kits ready and regularly check this website for details as they become available. Stay tuned via email or this website for more detailed information in the next day or two.

Official ARES Section activations are state-level activations authorized by the Section Emergency Coordinator, as requested by the Minnesota State Duty Officer, Minnesota Volunteer Agencies Active in Disaster (MNVOAD) or by local agencies.

788. Looking for SO-239 coupler

Yahoo group: rochester_hams

From: Jamie Ivanov
Topic: 788 Message: 788

I'm looking for a SO-239 coupler for a pair of PL-259 feeds. Yes yes I know it's a bad idea but I need one.

I would like to trade one or two of my adapters for it. I have BNC to SMA, SMA to SO-239 (no pigtail), PL-259 to BNC, screw on BNC connector, brand new PL-259 connector, chassis mount SO-239 connector, and BNC to SO-239.

Feel free to email me or call or find me monitoring the 82 repeater (I'm like a 7-11. I may not always be doing business but I'm always open)

792. Digital Net

Yahoo group: rochester_hams
Date: 2011-04-15 03:04:39 UTC
From: Bill
Topic: 792 Message: 792

Well, as I announced at the club meeting, we had our first SE MN Digital Net tonight, on 145.07 at 9 p.m..

At first, I was afraid it was a 'bust' - no checkins. But after I shut down the net, Red, WO0W down near LaCrosse called me on FM simplex. He had copied my MT-63 signals 100% down there. After I signed with Red, Paul, KC0NCA, called me from near Lanesboro, and we exchanged some digital text. Red was able to copy us both. We had a roundtable for a while, and it was fun. Paul reported that he could hear my MT-63 signals clearly from down in the valley, but not my voice signals.

So, it was an interesting first digital net. I hope more folks can join us next week. CSI is in reruns, anyway folks, so what else is there to do? The fact that I'm making it all the way down to the SE corner of the state with 50 watts and a vertical is very encouraging. If Red and Paul can copy me, I'd wager they could relay for anybody in that region that couldn't. I know that at least two folks in the Austin area wanted to participate but I think we didn't get the word out soon enough for this week.

If anyone wants help setting up their digital stuff, I've got a receiver going on 145.07 and 146.82 when I'm around the station, or drop me an email.

793. FS: Cross Country Wireless APRS TNC Digi Tracker

I'm looking to find a new home for my Cross Country Wireless APRS TNC Digi Tracker. My truck broke down and could use the money. This is brand new, never powered up and never had a radio connected to it. Features a built in GPS, APRS transmitter, and digipeater. Has 2 rs232 ports for radio/power and to hook to a laptop to utilize the built in GPS. I paid something like 140 for it, make me an offer. Email or call/text 608-399-4252.

794. Another path to DSTAR

Yahoo group: rochester_hams
Date: 2011-05-05 21:53:39 UTC
From: Bill
Topic: 794 Message: 794

I just saw this on the QRZ web site:
http://forums.qrz.com/showthread.php?295926-GMSKMICRONODE

This is a device that will make your 9600 BPS radio work as a DSTAR gateway - like a high level simplex node on EchoLink or IRLP. You would still need a DSTAR radio to access it, but in areas with zero DSTAR resources, this could be an entry into the technology. It will also work with some repeaters to make them DSTAR capable.

I found a few dollars hiding someplace, so I bought a DSTAR HT, and I've been playing with it this week. I can hear the DSTAR repeater at Rob's house, but I can't access it from here. There was quite a big net on whatever reflector the repeater was linked with last Sunday - it was interesting to hear people from all over the world checking in.

I'm waiting for UPS to deliver another toy today - I found a DSTAR DVAP Dongle for sale used, and fairly cheap. The DVAP is a very low power DSTAR gateway that runs off the USB port of your computer.

Anyway, I'll be on at 9 for the digital net tonight - on 147.255 repeater.

795. Armed Forces Day Tests

Yahoo group: rochester_hams
Date: 2011-05-11 18:06:31 UTC
From: Bill
Topic: 795 Message: 795

Every year, hams have an opportunity on Armed Forces Day to work military stations around the country. You work them crossband on HF - they listen for us in the ham band, while transmitting on a military frequency outside the ham band. This is one of the very few times when it is legal for hams to work non-amateurs.

This web page gives the frequencies and times of operation for the various stations.
http://www.netcom.army.mil/MARS/docs/AMC_Test_2011.pdf

I notice that at least two will be using MT-63 (though it doesn't say which mode - I suspect MT-63/500) and at least one is using PSK. Most will be doing SSB and CW.

796. Newbies - DIgital Net

Yahoo group: rochester_hams
Date: 2011-05-20 21:22:07 UTC
From: Bill
Topic: 796 Message: 796

Our new hams from the recent class are now in the database:

Jim, KD0ORO
Jim, KD0ORR
Josh, KD0ORQ
Kent, KD0ORN
Dan, KD0ORS
Steve, KD0ORM
Cheyenne, KD0ORP

If you hear these folks on the air, please say hello, and be willing to lend them a hand getting started. One way to help them out is to be on the air when they go looking for contacts!

I want to remind everybody again about the SE MN Digital Net, Thursdays at 9 p.m. on the 147.255 (PL100) repeater. The repeater seems to work well for covering a big chunk of the SE MN district - I have two guys who check in from Glenville out near Albert Lea and La Crescent in the eastern end of the district. We use the NBEMS suite of software with FLDIGI, FLWRAP and FLMSG on MT-63/2K protocol with long interleave and 8 bit special characters. I listen for voice checkins for those who can't get in on MT-63. We have had several folks check in just by holding their mike up to their radios to send, and vice versa to receive.

The 147.255 repeater is on IRLP now, too. Bob, AB0BW got permission to put it there, and it works great, but I think we are going to need to find a way to eliminate the IDer from the repeater - IRLP doesn't like it. I got booted off the WIN System this morning after our repeater ID'd - the scary part is that it was automatic, I think.

Well, that's good to hear, Dave. It's kind of amazing when you consider where it is, and it's only running 35 watts. Now, if we can get the KW pager out of the receiver, things will get very interesting. I've been having a lot of fun with my DSTAR HT and the DVAP Dongle at home. The DVAP Dongle is a device that picks up the GMSK modulation from your DSTAR radio, and relays it to the DSTAR network on the Internet via your computer. The DVAP is a little 10 mW transceiver, good for very local use. When I travel, I plan to take the DVAP so I can get into DSTAR when I'm not near a repeater.

OK, I finally read the rules for Field Day - I know, it's about time.

This year, GOTA can work VHF/UHF as well as HF. This should be interesting! We'll have to be careful to avoid QRMing Mel.

Mel also suggested that we can use some of those little digital interfaces to send NTS-style messages between a couple of our stations. You can get 10 points for each such message up to a maximum of 10, I think. If we can arrange a liason to NTS, we can also send a message to the SM for another 100 points.

I was hoping the scouts could send messages for their Signalling Merit Badge, but according to Steve, KD0ORM, that badge went away at the end of 2010. Nuts...

On that front, I'd really like to find a Tech who can do CW, even marginally.

I'm planning to do the satellites, too - in particular, I want to do the SSB/CW birds.

As for the HF antenna, I think I just decided that this year's antenna will be cheap. Or, maybe I should say that my lead-footed daughter's brakes have dictated a cheap antenna.

I like 43 foot verticals, so I think I will use a 43 foot vertical/Lazy L. I will either run a wire up to the top of the pole near the GOTA station, or I have a 20' fiberglass pole I can use for part of the support. I will make a bunch of radials, and try to set them up to reduce the trip hazards.

Great antenna idea. It will work well for you.

Wish I had time to play with CW but I have a feeling that I would not be
good enough by the time Field Day comes around.

Come over to the QRP station. We'll have both SSB and CW, and our standards are low -- you can try out CW, slowly, with someone there to help out. We'll be at Gamehaven with the rest of RARC, off to the side by ourselves.

It's actually possible to do CW contesting search-and-pounce, using the rig's memories to send, without having to key CW at all, and not being very good at copying, either -- you can listen to the calling station over and over till you figure out the call and the exchange. It's very slow, that way, of course. Come try it.

From: Bill
Topic: 804 Message: 804

Here it is Thursday again, and my efforts to get the word out about the Digital Net are not panning out very well, but here we go again -

Digital Net on 147.255 repeater (PL100) at 9 p.m.. We take voice checkins for those who can't do the digital modes. We use NBEMS software - FLDIGI, FLWRAP and FLMSG with MT-63/2000 protocol, long interleave and 8 bit extended characters. The current version of FLDIGI should have the proper defaults for MT-63/2K. I am usually around on one or more of the Rochester repeaters to help, now including the DSTAR repeater.

Please spread the word, particularly beyond the borders of Olmsted County.

Thanks...

Bill,

Sending out this email reminder was pretty effective. I planned to check in, and made sure I had the current software ... and at 9:45 I looked up from my book and realized I'd missed it. Next week I'll set an alarm.

Great! We had some new checkins to the net last night, and I expect more in the near future, so it's growing. Now, I need to get the word out beyond Olmsted County. Even my 'DX' regulars didn't make it last night.
The 147.255 repeater has pretty good coverage, at least for home stations, so it should work for people all over SE MN.

I decided to do the first 'can you hear me now?' tests on the new DSTAR repeater this afternoon. I put a second antenna on the truck and hooked up the 5W HT to it. Since I was in the south end of town, I decided to head south on 63.

The new repeater was solid all the way down to Spring Valley, except for the 'hole' in the middle of Stewartville, where the signals were quite weak. The 'hole' seemed a lot smaller on DSTAR, though. From Spring Valley, I took Highway 16 up through Grand Meadow to Dexter.The repeater was solid at Grand Meadow. I had no trouble getting in with 5 watts and the external antenna.

When I got to Dexter, the repeater was still good copy, but I could see it was considerably weaker - a lot of flutter on the RF signal, although it sounded fine. I could still get in with 5 watts from there, in most places, but I don't think I was copyable. However, I had to go to 50 watts to get into the 146.625 repeater from there, so I'd say DSTAR has about a 6 dB advantage, as far as keying the repeater goes. I could copy the 35 watt DSTAR repeater solidly from there, so a 25 or 50 watt mobile should do fine.

K0TMP in Mason City gets into the repeater just fine, but he must be a bit weak. I think there is still a little desense from the pager - at times TMP goes 'R2D2' and he said I did the same in Stewartville. We may want to consider a better filter than the one we're using now, but it's certainly much better than it was before.

I know that N0HZN is looking for volunteers to help in the Twin Cities this weekend, and I don't want this to interfere with that effort, but this item appeared on the QRZ.com website yesterday:

http://forums.qrz.com/showthread.php?299002-Joplin-Tornado

Apparently, they're looking for ham volunteers in Joplin this coming week. You will need to contact the people mentioned in the article before going down.

Meanwhile, I'm still trying to get a feel for where we stand with the MS-TRAM bike ride in July. I'm suffereing from a lack of communication at the moment, but I believe that more volunteers will be needed. The web site for that event is www.ms-scram.org, and volunteers need to contact the event coordinator.

I'm going to volunteer to go to the Twin Cities this weekend myself - should be much cooler than Missouri, and I would be more of a liability than anything in a disaster zone.

My truck is still not in an operational state. I need to find someone who can work out a payment plan for upper/lower ball joints and probably bearings too. That's $1200-$1700 and seems mechanics are not warm to working with a public servant.

If anyone knows where I can find such a person then I would gladly volunteer.

Scott,

Just so I am understanding it correctly, are you saying the club pays out $100 -175 and the individuals that are offering monies go to the club or we pool the 100 - 175 with the individual donations for a grand total.
 Let me know. I will go to the exec committee witht his.

Hi Rod

It was just a suggestion but my thought was that RARC cover the costs as a goodwill gesture for Joplin. There are several of us who have said we would donate 20 each to help out. Our donations could go to RARC to reimburse the club for whatever it spends covering expenses. I am guestimating 100 to 175 in expenses for the two volunteers for gas etc but the club can set whatever budget or limit it wants. I hope this idea makes sense?

Kind regards,

Scott

From: Doc
Topic: 820 Message: 820

I plan to leave town mid-afternoon Wednesday, and will probably pull off and sleep a couple of hours around 23:00, then continue on to Joplin. I tender a very sincere thank you to everyone who's helping to make this trip possible. I will make sure our ARES group and the RARC is well represented. I plan on being back in town next Monday.

Best Personal Regards,

Dave Seavy

Check out k5ehx's repeater mapping, that will be what you're looking for. Its k5ehx.org or .net. I'm not at my computer or I'd pull the exact listing. Its worth finding out what repeaters are in range vs. the cities you will be near.

Thanks to the following people that will work this Saturdays June 4th at Chester woods park, cross country run communications.From 7:30 am to 12:00 noon est time.

Dan Lovik KC0VMC
Jamie Ivanov KC9LFD
Greg Updahl KC0EEU
Dave Owen KC0VIM

If anyone else would like to help, please contact me at wiebke@... or 254-3993
Cheser Woods Park is located on Highway 14 East of Rochester.

The 147.255 repeater pl 100 will be the talk in and working repeater for the event.
The race starts this Saturday at 8:00 PM. Please be there NO later than 7:30 PM
Report to shelter #5 in the picnic area of the park. Ask at the enterance for directions.
There is no charge for hams that are helping with the event.
HT,s are sufficiant for communicating. You may be able to drive to your location,or be driven by gator to your location. That is why you need to be there early.

Race contact cell number is 507-951-2415 for on site communications.

I will be out of the area but can be contacted for information this Saturday by cell phone.

Well, I guess KC0UCN is limping back after his Jeep rejected it's water pump somewhere in the hinterlands of Iowa. Have I ever explained how they pronounce 'Jeep' in Mexico? The 'J' is pronounced like the letter 'H' in English.

Meanwhile, we got a formal request through ARES channels for help for SATERN in Joplin. PLEASE follow the process described if you are interested in volunteering:

To: Minnesota ARES DECs
From: KD0ASX, MnSEC
RE: Request for volunteers for out-of-state emergency

Hello all... some of you may have seen emails floating around about SATERN's request for hams for the continuing recovery in Joplin, MO. This is the official word from ARRL as to their and SATERN's needs.

There will be no official state-level ARES activation by me for this event. However, please feel free to forward to your ECs and if anyone is interested then can follow the instructions below.

Thanks...

Dan Anderson, KD0ASX
Minnesota ARES Section Emergency Coordinator
P.O. Box 85
Adrian, MN, 56110
(507) 827-3052
(605) 261-8027 (cell)

From: sec-bounces@... [mailto:sec-bounces@reflector.arrl.org] On Behalf Of Ewald, Steve, WV1X
Sent: Friday, June 03, 2011 12:07 PM
To: sec
Subject: [sec:161] SATERN Request for Volunteers for Joplin, Missouri

Hello, Section Emergency Coordinators.

This message is also being sent to the ARRL Section Manager Reflector.

You are welcome to distribute this message as needed. Thank you very much.

In accord with our Memorandum of Understanding with The Salvation Army, we are looking for volunteers to aid them in their work in Joplin, Missouri at this time. There is a specific process to be followed in doing this, so please read this information carefully.

The Salvation Army continues to provide food, drink and other items of basic care to survivors and rescue workers in the impacted areas of Joplin, MO. While cell phone coverage is no longer much of a problem in Joplin, amateur radio continues to be important in

certain operations such as those of the Salvation Army where the ability for several persons to hear what is going on at the same time is an asset.

As a SATERN (Salvation Army Team Emergency Radio Network) operator, if deployed, you will be asked to go out on Salvation Army vehicles into the areas impacted by the Joplin tornado to supply logistical support. The Salvation Army vehicles supply basic human needs (particularly food and drink) and you will play a big part in the operation. You will relay information as to inventory, requests for food and drink, maintenance problems that develop, etc. It may surprise you, but at certain periods of the day the radio traffic has been almost constant. The Salvation Army Disaster Response Operations are now running from 7 a.m. to as late as 9 p.m.

DO NOT SELF_DEPLOY!

Wait to be contacted for possible deployment and assignment.

The qualifications for being assigned are:

ü Technician or higher Amateur Radio license.

ü Good health ☐ you will encounter 100 degree heat, exertion and long hours. You need to be in good shape!

ü Ability to take on a 3 to 5 day deployment in the field.

ü Have an HT and a mobile (VHF/UHF) radio ☐ also having APRS is a big plus.

ü Experience with disaster responses. ARES leadership experience a plus.

ü NIMS/ICS training with a minimum of IS-100, IS-200 completed.

The process to volunteer is:

1. Send an email to emergency@...

Include name, call, contact information (phone & email), location

and specific information on how you meet each of the criteria above

2. Your information will be checked against the current needs

3. If cleared, your contact information will be sent to our liaison with SATERN field leadership.

4. If assigned, you will be contacted by SATERN directly and given further instructions.

The Salvation Army will try to supply you with some type of lodging, if available. If deployed, you should consider bringing a sleeping bag or make other sleeping arrangements should you need to be housed at the Salvation Army.

SATERN operations in Joplin are being held on the 147.00 (positive offset) repeater. If you are deployed, you will need at minimum a 2-meter handheld radio with a spare battery pack (or cigarette lighter adapter) and a magnetic mount antenna. Due to some communications problems experienced on 2-meters within the impacted area, a 2-meter mobile radio with magnetic mount antenna would be desirable. Additional information will be furnished to you.

No reimbursement for travel or any other expenses has been authorized at this time. Therefore, I would recommend that you record your mileage and save your receipts. You may be able to deduct your mileage from your taxes (consult your tax preparer). The Salvation Army will of course provide you food and drink while on duty.

==========

Thank you!

73,

Steve Ewald, WV1X

Supervisor, Field Organization Team

ARRL, the national association for Amateur Radio□

Topic: 830 Message: 830

By now I think everyone knows the Joplin trip got destroyed due to the water pump going out on my Jeep Wednesday night about 30 miles south of Des Moines IA. Between the cost of towing and repairs, we couldn't continue to Joplin. Since folks donated money for the purpose of going to Joplin, I want to get those funds back to everyone. I've sent Bill K0RGR a note letting him know that I am going to return the donations. It'll take a week or so to recoup financially so I can do it, but I will send out a message when I have the money.

I think this is only right, because the money was donated for a specific purpose and the mission failed. I don't want this situation to sour anybody on donating to someone else in the future. If you have any questions, you can email me daveseavy@...

Thanks

832. Can You Hear Me Now - Continued

Yahoo group: rochester_hams
Date: 2011-06-04 20:52:03 UTC
From: Bill
Topic: 832 Message: 832

I had the opportunity to try out the DSTAR repeater on my way to Red Wing this morning and again on the way back.

Basically, I was solidly into the DSTAR repeater all the way to Zumbrota, but it got 'flaky' in the town of Zumbrota itself. On the east end of Zumbrota, I was solid again, all the way to where Highway 58 drops off into Red Wing. In Red Wing I was able to get into the DSTAR machine from in front of the Red Cross building, which is quite a bit higher than the town. I was not able to get into any of the Rochester repeaters from down in the town itself.

On the way back, I made more comparisons. Coming out of Red Wing, I picked up the DSTAR machine again at the top of the hill, but could not key the .625 repeater until I was much closer to Zumbrota. As I recall, I could bring up the .255 machine from Goodhue, but not the .625. The DSTAR was solid, however.

Back in Zumbrota, however, I would give the VHF repeater an edge. The signal was not as strong, but 'picket fencing' on UHF causes a lot of packet loss, making digital voice less readable. On VHF, the picket fencing is much slower, and the analog audio is not affected as much.
If I was stopped, though, the UHF would win on overall audio quality.

I was solidly into the repeater all the way back from Zumbrota on 5 watts or less into a thru-the-glass antenna on my windshield that I've never checked the UHF SWR on.

Earlier this week, I tried the DSTAR repeater from inside a couple local stores. I can't hit any of the analog repeaters from inside Wal Mart South. The DSTAR machine was really flaky but usable in parts of the store, anyway. Target is another dead spot, but the DSTAR machine works well from there.

Before I lose everybody who has decided that DSTAR is not for them,
there is an outfit in Holland that is planning to come out with a line of DSTAR radios later this year. If I read their website correctly, they intend to also have an adapter that will let you do DSTAR through almost any 9600 baud capable radio. They call themselves Dutch Star "DSTAR for the rest of us", and they already make equipment for non-ICOM DSTAR repeaters, hotspots, and gateways, and software for a lot of different hardware.

I would like to sustain my donation. Somehow it just seems
right. If better to not go through the original process of
the club sponsorship, then individually.

From: Bill
Topic: 834 Message: 834

Two items from the Winona ARC newsletter today.

1. The Winona Triathlon has made a last minute request for ham assistance this Sunday. They need 4-5 hams for this event which has 800 participants. People interested can contact Les Hittner, K0BAD, lhittner@... . Les needs volunteers by Wednesday night.

2. There is a ham in Preston, K0BDK, who owns a silkscreening and embroidery business. The Winona club is working on a big order with him. If Rochester is looking for something like that, this might be an opportunity.

835. June VHF Sked for this Saturday and Sunday

Yahoo group: rochester_hams
Date: 2011-06-08 18:32:55 UTC
From: luthsurgitech
Topic: 835 Message: 835

Hello all, we need you support in making contacts for the June VHF Contest (just like what we did for the January VHF Sweepstakes)

I (Rodney, kd0ebt) will be on the 2 meter and 70 cm FM simplex freq. for the first 10 minutes on the top of the hour from 1 - 9 pm local time on this Saturday 6/11. Anybody with an HT or Mobile can either hit your vfo button an tune simplex channels or program them in ahead of time. If you have a dual band ht, we can go to the other freq. and make an additional contact. Below is Mel's, kc0p/r announcement to prepare yourself for the contest.

Subject: Rochester Simplex Frequencies 11 & 12 Jun 2011
For FM use 52.525 MHz, 146.55 and 446.00
Probably find each other on 146.55 and move to the other bands by arrangement on 146.55

For SSB there is a DX window from 50.100 to 50.125. No USA stations are to call CQ in this window, only answer the DX. General USA operations start above 50.125, 50.130 may be crowded, move further up the band. KC0P likes 50.170.

144.200 is the National calling frequency for 2M SSB. Don't sit there and rag chew about everybody you have worked, there could easily be other weak signals underneath the strong locals. Keep tuning around to find new stations that you have not worked

432.100 is a popular spot for SSB on the 420 MHz band. Usually move there by arrangement on the 2M band. There are many activity hot spots like Minneapolis, Eau Claire, Red Wing, St. Cloud, Grand Rapids, Alexandria, Lacrosse, Des Moines, Sioux City. If you have a beam, point in those directions and have fun.
73'

Mel, kc0p/r and Rodney kd0ebt

Have you heard any more about the Triathlon this Sunday? I have sent an email to K?BAD but have not heard anything one way or the other and was just curious. Did anyone else also volunteer and have or have not heard anything?

838. Another Event ...

Yahoo group: rochester_hams
Date: 2011-06-13 01:11:44 UTC
From: Bill
Topic: 838 Message: 838

Winona ARC is looking for help with an event next Saturday in teh Rushford area. Here's an email from the organizer:

"Hi Bill,
We have a good group of volunteers for the Trinona tomorrow, but we are still in need of some help for the Rushford Nanotrek (http://www.rintek.org/html/nanotek_trek.html) next Saturday, the 18th. Lance, KB0YJU, and I are arranging support for that. We currently have ourselves and one more. We could really use three additional people. We need one operator for a base station at Rushford High School (we have the equipment), although I've also asked the committee there to contact some hams in the area for that, plus two additional mobiles. The greatest need for the mobiles will be from 7:30 - Noon, and 7:30 - 2:00. We are offering support on the course until 4:00.

Since this is in the Rushford area with lots of valleys, we need good mobiles, but I think we can find equipment if we have operators.

Thanks for your help!

73,
Erik, WB0NIU "

Erik's email address is ewbrom@...

Of course, RARC has the HyVee Triathlon the following day.

839. My loggin program failed

Yahoo group: rochester_hams
Date: 2011-06-13 00:53:53 UTC
From: luthsurgitech
Topic: 839 Message: 839

Hey all, if I made a qso(s) with you on Satuday during the vhf contest could you please send me your information(call,time, gridsquare)I would most appreciate it.

My logging program somehow removed all my saved qso's and I have no idea how because I didn't do anything to it. I even entered the program later in the night to look at the log and it was fine then.

Thanks,
Rodney, kd0ebt

Uh-oh. Was this HamLog?

Saturday, 1900Z, 2meter FM -- W0LLN, EN34
2125Z, 6meter SSB -- W0LLN, EN34

I ended up with 30 QSOs, 6 of them CW. I like 6 meters, but my transverter has some issues. And propagation was really quite strange -- I guess that's what 6 meters does.

Yahoo group: rochester_hams
Date: 2011-06-14 04:48:02 UTC
From: kyle.button@gmail.com
Topic: 844 Message: 844

I have a gently used PRO-197 up for sale. No visible marks anywhere.

It has been programmed for Rochester area.

I have the programming cable for it as well.

Nothing wrong with it, the wife just doesn't like it on, and it is just sitting around.

$300 OBO...

I'll even drop it off..

858. Field Day Setup/Teardown RSVP ASAP

Yahoo group: rochester_hams
Date: 2011-06-20 19:20:26 UTC
From: luthsurgitech
Topic: 858 Message: 858

Hello all,

For those of you that made it or not to the June meeting we discussed possible set-up staging times out at Gamehaven for Field Day. Even if you are unable to participate, but would like to help at anytime before/during/after the event, it would be most appreciated.

Please RSVP as to what times you can help so we can get an idea of who and when you can be there and plan accordingly. I will also post this on the club yahoo reflector but don't feel the need to reply to both. I will send you a response so that you know I recieved your email.

Please indicate which below.

Friday 6/24 at 1:00 pm
Friday 6/24 at 5:00 pm
Saturday 6/25 8:30 am - 1:00 pm
Sunday 6/26 1:00 pm (Teardown):

Talk-in Friday - Sunday will be the 146.82 rptr. If you are heading out, give a call first to see if there is anything that is needed.

John Scott may have more information This is what I know. Pizza's will be brought out on Saturday afternoon by KC0ORS. Saturday evening John Scott and I are grilling food. A dish to pass is requested by those attending. On Sunday morning John and I are making breakfest.

I am in California. John is doing the foot work on getting the food, plates forks etc. I will be back in Rochester late Friday evening. I have the grill, and charcoal.

John if there is anything that I will have to find or get let me know. I will get on it Saturday morning. Thanks for doing this in my absence.

John Scott may have more information This is what I know. Pizza's will be brought out on Saturday afternoon by KC0ORS. Saturday evening John Scott and I are grilling food. A dish to pass is requested by those attending. On Sunday morning John and I are making breakfest.

I am in California. John is doing the foot work on getting the food, plates forks etc. I will be back in Rochester late Friday evening. I have the grill, and charcoal.

John if there is anything that I will have to find or get let me know. I will get on it Saturday morning. Thanks for doing this in my absence.

We have a radio operator unable to attend the parade event this Friday. Can you be a shadow for the Parade director at the starting/staging area. You will relay any changes in the parade log to the hams around the parade route. You need a 2 meter HT to work the event on the 146.625 repeater. Contact Rob KC0FOW if you can help.

Thanks for your time.

I recently purchased a pro-197 from a fellow ham, and it's an entirely different programming format than the 2096. I have both the commercial program software pkgs, but am still confused. Nothing new for me I know. Anybody with 197 experience? Please contact me as I'm having a tough time even with the software and importing from RR. Thanks

Topic: 876 Message: 876

I'm glad we got that sorted out. I was a little concerned about the generator. Nobody has complained that his box of power tools is missing yet, so I think we guessed right that they belonged at the scout camp.

I was wondering if we could trade the 'spare' generator that turned up this year for a new ladder to replace the one that's been missing from Pat's, but I guess that's been accounted for. At least I think so. There were a couple of small red generators floating around unattached, I think. One was a lifesaver over at the phone/GOTA station.

Mel, how did the rhombic work out this year?

Next year, I want a better antenna for GOTA. I've decided that I am going about this wrong - the newbies NEED a better station, in order to have more fun. I wonder if after spending a few hours trying to pull weak signals out of the mud, they decide that HF just isn't worth it. I really hope they spent a while watching the phone operator inside, so they could see what a beam will do for you!

This year made it clearer for me. Using the half vertical/half horizontal 'L' we were able to make contacts on all bands from 80-6. But, the signals on the higher bands were weak and there was a lot of noise. The phone station next door, with a beam and the TS-940, didn't hear any noise. I even think they were hearing better on their G5RV, which shouldn't be a big surprise on 40 and 80.

Radios were interesting, too. On Saturday, the digital station was giving us some hash on 20 and 15 meters, on my IC-746. After several hours of this misery, I remembered that the IC-7000 seemed to handle strong signals better, so I took it out of the truck. Sure enough, it was not bothered by any of the other stations, except when we heard harmonics on 10 meters from stations on the lower bands.

However, as well as the 7000 rejected the crossband front end overload, it was no match for an ancient IC-751A that KD0NCA brought. The 746 did a little better than the 751, BUT, the 746 is easily overloaded! I know that part of the issue with the 7000 is audio and a 'tinny' speaker - headphones would have helped, but I still think there are much better receivers out there for contest environments. We didn't really try the 751 to see how well it handled the overload.

So, next year, I'm looking for a contest grade rig for GOTA, but a better antenna is the top priority. Anybody like to do welding? I have a few ideas...

Overall, the radio conditions could not have been much more ideal for Field Day! Every station had a chance to shine! I'm waiting for the swelling to go down, so I can get the logs out of the truck...

Topic: 876 Message: 879

Might I recommend the hexbeam. Each year I learn a little bit more and working qrp for me anyway makes the learning curve quite high. I was operating on the 20/15/10 hexbeam after my antenna experiment wasn't cutting through the mud. Thank you to Peter for letting me use the hexbeam for all of the Field Day btw. So back to what I was saying. Late Saturday night I started to figure out that there were certain calls (1's,2's,3,s some 4's, and 8's,Ontario, and interestingly enough Colorado off the backside)that I was able to consistantly get with my 5 watts. Once I put all the pieces together, I would tune up though 20 and 15 and listen for those those calsl and I was consistantly getting each one.I had a stretch where I was making a Q every 3-4 minutes (subtract the time to double log after my log crashing incident and hunt and pounce). Now I know that with a lot more power I definitely could have made a lot more Q's but I guess QRP suits me. Makes my want to work harder to build really good antennas for portable use (VE7CA's tribander is my next goal).

Anyway food for thought.

Humble regards,
Rodney

I am willing to do some welding. I also have a generator that we can use I just have to make it mobile. I have access to a 30' tower we would just have to figure out how to transport it.

881. Field Day Feedback for those not on the Club mailing list

Yahoo group: rochester_hams
Date: 2011-06-28 13:19:53 UTC
From: luthsurgitech
Topic: 881 Message: 881

Hello all,

I can't thank you all enough for whatever aspect of Field Day that you helped out with wether it be support, operating, set-up, food, equipment, suggestions, feedback, visiting, advocacy, and so on. While this was a journey into different territory operating at a new site, I feel that we did very well this year. I haven't heard the stats from the Low Power station yet, but the QRP station had more Q's than we did last year and I have heard rumors that the main station did quite well.

I want to open this opportunity to up to you all to offer feedback from your observances and experiences of Field Day 2011. I ask that you challenge yourselves to find both successful aspects and also areas of improvement. Remember, there are different kinds of operators here and we each can and will offer our own unique take and view of how Field Day went and what we saw. Grant, k1kd and I have already began discussing and he reminded me to get on this right away since it is fresh in our minds (Thanks Grant!!).

So that people don't get a massive amounts of email, please just reply to me and I will work through the emails and put together something for our July meeting.

Once again... THANK YOU!!!!

73'
Rodney

882. GOTA Report

Yahoo group: rochester_hams

From: Bill
Topic: 882 Message: 882

154 Q's -

by band:
80-1
40 - 26
20 - 39
15 - 45
10 - 37
6 - 6

by operator:
K0RDA - 38
KD0MOE - 32
KD0NCA - 29
K0RPD - 27
WTO? - 12
DJM? - 11
Zack S. - 5

We earned 4 20 point bonuses because each of the top 4 operators had over 20 QSO's each. We also got the 100 point bonus for making over 100 GOTA contacts. We missed the coaching bonus because I had to log much of the time due to not having enough operators.

Overall, this was about the best GOTA effort so far. We'll instigate constant improvement for next year. Now is when we have to start recruiting new operators for next year!

Grant, I sent you GOTA last week. I just resent it, so you should have it now. I sent it to both the IBM and Yahoo addresses this time.

889. MS-Tram Information

Yahoo group: rochester_hams
Date: 2011-07-04 02:31:45 UTC
From: Daniel KDÃ□ORS
Topic: 889 Message: 889

I received this information on July 2nd. It is from the MS Society MN Chapter about the MS StarTribune TRAM 2011. I was thinking that if we know who all was wanting to help/volunteer, we could just do 1 RSVP to him. I also have an email into him about people that have not officially signed up on their site yet for volunteering.

Here is the official letter I received:

"The National MS Society will be holding a volunteer training for all key volunteers on:

Wednesday, July 13th
5:30pm at the MS Society Office
200 12th Avenue South
Minneapolis, MN 55415

The training will cover event logistics, emergency procedures and volunteer responsibilities. This training is for all supervisors, first aid volunteers and route support. Food will be provided and the training should last until approximately 7:00pm.

Please RSVP by Tuesday, July 12th by calling Will Ziegenhagen @ (612)335-7992 or emailing @ will.ziegenhagen@...

DRIVERS: For those of you who will be driving donated or rented vehicles OR if you will be using your personal vehicle for your volunteer position for the MS Society, remember to bring your driver's license and proof of your automobile insurance to make copies at training.

Best regards,
Will Ziegenhagen
Volunteer Coordinator"

Grant, I never got your post - I got Bill's GOTA post below in an email but for whatever reason our groups does not send out all posts as emails?! THANKS much for doing this.

I will send you a separate note to your yahoo mail with a scan of the PB Media info attached since it appears we need to send a few of the bonus pts info in to ARRL if I read this right.

*** QUESTIONS to those on Rochester_hams ***

BOB AB0BW (I might hear your on the 10m net tonite)
Do you have notes QSOs made for Natural power QSOs completed
7.3.8 100 bonus points for Field Day groups making a minimum of five QSOs without using power from commercial mains

BILL K0RGR - I believe you have the GOTA info below for bonus points.\
We earned 4 20 point bonuses because each of the top 4 operators had over 20 > >QSO's each. We also got the 100 point bonus for making over 100 GOTA contacts. GREAT WORK Bill!

TO ALL: does anyone know if Randall Trap either copied the ARRL FD message or how I can reach him (no email, phone or address on RARC web site).

73 Dave K0VH (suggest you respond direct to me dcnaatz@...)

Ok, just received a reply back from William. He said that anyone interested in helping can come and attend the Wednesday meeting. I know that Bill K0RGR and I are going to carpool. If there is anyone else interested in going, let me know so I can relay that to William. Also, if there is anyone interested in helping but cannot attend, let Bill K0RGR or myself know as soon as possible (along with your availability for the event), so we can let them know also.

As was briefly discussed at the RARC Meeting on Tuesday, if there is a group that is interested in checking out 10 ghz operating and equipment and see what it is all about, I would like to get a list going of who may be interested in going and checking it out for the August contest (Aug 20th and 21st).

Rodney,
Didn't get to the meeting. I have been picking up bits and pieces of surplus gear for the past two years for all the UHF and up bands but I know I can not get to it until this Winter. Keep me in mind please for the future tho.

BJ or Rodney:

I was contacted to set up a ham radio booth at the olmsted county fair this year. The fair has a new board and they are doing a free fair. They want to create interest and activities of area groups to people at the fair. Contact me at 254.3993 so I can get you the information. 73

I need some help dropping a pole antenna mast this Saturday. It is a 2 inch 20-25 foot mast with a VHF TV antenna on it. Should take less than 1/2 hour to walk it down. The mast is going to a club member KC0VMC. He is puttting up a tower in his back yard.
Let me know if you can help and what time works for you. I will then get this organized. The tower is in NE Rochester. Thank for your help.

Topic: 898 Message: 899

I am seeking hams that are interested in helping out with a County Fair demonstration/booth. Depending on the time, I may or may not be able to help out with it as it may conflict with my schedule. I haven't got all the details yet, but would like to incorperate various aspects of Ham radio and having some that could manage all that would be great, but not required. I have some P.R. materials that can be given out, also if we could do a NBEMS set up and pass some traffic back and forth, show an aprs map that is overlaid on one of our past Storm spotting deployments, have an HF txvr setup (anybody have a 20 meter hamstick) I have a portable 20 meter vertical. Could use 20 meter c-pole possibly No ground wire needed. This is very last minute as the Fair is next week. Let me know if you are interested. I will help you get all/most materials needed.

901. Field Day Feedback Document

Yahoo group: rochester_hams
Date: 2011-07-19 20:42:43 UTC
From: luthsurgitech
Topic: 901 Message: 901

As discussed at the club meeting I've created a document (google doc) that can be added to by any of you to offer ideas and feedback for Field Day. It is saved as a google document and all that can use the link are allowed to add to it. Use the first column for the subject and the remaining columns to the right to add feedback. I've started some already. Please offer feedback in a constructive way offering solutions that can then be used by the committee for future use.

Thank you,
Rodney, kd0ebt

If someone will loan you a DSTAR radio, that would we a good thing to demo now that the repeater is on the air. Just connect to Reflector 1C and wait for people to show up or ask for a demo is you have a crowd. I would be willing to let you borrow my HT if needed.

First, we had a note from the ham organizer, Gordy, N0ZRD. They had a last minute cancellation and need another SAG wagon person for the week.

Second, I drove through Whitewater last week, and was surprised to learn that the 146.745 repeater actually works down in that hole fairly well for mobiles. The repeater is situated so that it looks straight down three river canyons, which is nice to know for the future.

Ain't we got fun?

Unfortunatly it was I who had to bow out due to financial issues brought on by vehicle breakdown. Basically cant afford to take the entire week off in light of the current situation.

With that being said, I need to get a hold of KØRDA and return the antenna I was borrowing from him for the event.

919. Olmstead County Fair Update/Request

Yahoo group: rochester_hams
Date: 2011-07-22 11:34:52 UTC
From: luthsurgitech
Topic: 919 Message: 919

I guess I would be a little off to call this an update as I know nothing new. I got the information (Flyer and Business Cards) and emailed the organization on the website. I have yet to get any information back.

If there is somebody that knew someone on the inside of this Fair Family Day stuff that can find out more information, that would be helpful.

Work is busy and I have been having overtime so I am somewhat limited in following up for all of this until the weekend.

Thank you to all that have offered to help out. I will keep you posted as soon as I find out something.

924. Re: Olmstead County Fair Update/Request

Yahoo group: rochester_hams
Date: 2011-07-22 19:47:01 UTC
From: Daniel KD0ORS
Topic: 919 Message: 924

Ok, so, I talked to Kevin Guy at Everything Hobby and he is the one putting this all together. Basically he is trying to get a bunch of hobby groups together for this Fair Family Night on Saturday, July 30th from 5pm-9pm.

What he is kinda looking for is possibly a couple of us with equipment in our vehicles (specifically SkyWarn people with lights and other stuff like decals and such) to "bring awareness" to what we do. His hope is to spark interest in SkyWarn/Radio from people who are interested but didn't know how or who to talk to about it.

He also is looking for the possibility of having a couple stations set up (one in the midway with our vehicles and one in Graham Arena) for 2-way interaction kinda what Mel and I did at field day with the Webelo scouts with a message relay. (The possibility for digital also presents itself here.)

We would have as big a section of the area we would need for our stuff and the idea is that the fair patrons that come get a "bingo card" and as they got each exhibit, they would get a stamp. Then they turn-in the completed card for a free gift. This would make them visit all the hobby exhibits and allow us to talk to them and answer questions they may have.

At this point, even if we were able to coordinate just a simple demo like what Steve suggested would probably be ok. It would get us some more exposure and also allow us to inform people about the upcomming testing session.

I will be at the breakfast tomorrow morning also Rodney so we can talk more about it and I can give a better idea of the "vision" Kevin has.

926. Olmsted County Fair (Real) Update

Yahoo group: rochester_hams
Date: 2011-07-24 14:19:12 UTC
From: luthsurgitech
Topic: 926 Message: 926

Thank you to all that have responded through the Yahoo group or to me directly with your willingness to help. My thoughts are the more the merrier. Their will be a lot of people at the Fair and so being there to help out, encourage, answer questions, demonstrate, will benefit all.

Here is the scoop.

The folks at Everything Hobby are working on promoting local community groups/clubs that support various hobbies and leisure activities, with what appears to be special emphasis on hobbies that connect with science/engineering/creativity. This is a very exiting opportunity that will be benefit the community, the Feed Your Brain project, and Amateur Radio. The sky is the limit with what we can do here, and the more show and hand on we can make it for the community, the better.

Where: Olmsted County Fair
When: Saturday July 30th, 5-9 p.m. (Set up at 3 p.m.)

What are we doing??

The "Feed Your Brain" project has asked us to provide an informational, hand-on, experiential set-up.

We are working on a demonstration and will need volunteers to help out.

I will update with a finalized plan later.

Topic: 928 Message: 928

My first attempt to post failed.

I plan to be in Wyoming or Utah that night, unfortunately.

I would suggest a few things -

DSTAR, IRLP, and Echolink all demo real well. The IRLP reflector for the WIN System out on the west coast is usually very friendly and good to show off, as is Reflector 1C on DSTAR. APRS is good if you can get a PC display. You should be able to use my beacons - k0RGR-7 on the aprs.fi website. If you've got live APRS, we could exchange text messages, as long as you give me time to pull over and respond!

I just heard John's offer of a FLEX - that would be great. Be sure you can see the display in the lighting conditions.

I've wanted to see the club do something like this at the fair forever. Being able to do it for just one night is probably a great thing - the biggest objection to us doing a display there is finding people to man it for the whole week.

From: Bill
Topic: 932 Message: 932

Well, the 146.82 repeater got a good workout today. In the morning, we were able to use it over the entire route between Rochester and Owatonna. I was able to make the repeater from West Concord on an HT.
There was some tropo enhancement in the area - that .82 repeater in Waterloo was still in there this morning, at times quite strong on my HT. But, I think the .82 was working remarkably well today.

Several other repeaters in the area will be getting exercised this week.
Tomorrow, the Owatonna and Austin machines get their turn, followed by Spring Valley and a portable UHF repeater on Wednesday. Thursday will be Winona's turn, then Friday I think it will be a combination of systems, ending up on the 147.255 back to Rochester.

I was operating from a converted bus belonging to Peter, KC0TFB. He has this thing decked out to provide about any kind of communications the MS rides might need, and he's been supporting them for the last 10 years. It has an onboard generator, a 400 watt solar panel on the roof and a bank of storage batteries, several VHF/UHF rigs and an IC7000 as well as a business band rig. There are multiple antennas mounted on the side of the bus. He's also got extensive 802.11 networking gear, and provides WiFi for the rest stops.

K0RDA approached Pete about bringing his bus to the Olmsted County Fair night on Saturday, and Pete agreed! This will help make for a grand show, I think! If nothing else, lots of local hams should stop by to check out this vehicle!

933. New poll for rochester_hams

Enter your vote today! A new poll has been created for the
rochester_hams group:

What do you expect from your radio club? Select all of those
that apply.

o I'm a newbie - I want an Elmer.
o I want to socialize with local hams.
o I want more on the air events like Field Day.
o I want more technical presentations.
o I want more social events like Christmas Party and Picnic.
o I want the club to advertise ham radio more.
o I want more public service events.
o I want more radio classes.
o I want help building equipment.
o I want help repairing/maintaining equipment.

To vote, please visit the following web page:
http://groups.yahoo.com/group/rochester_hams/surveys?id=13093977

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

937. Olmsted County Fair Amateur Radio Spectacular

Yahoo group: rochester_hams
Date: 2011-07-26 22:53:00 UTC
From: luthsurgitech
Topic: 937 Message: 937

I need a final confirmation for those who can help out Saturday afternoon/evening at the Olmstead County Fair.

I realize you all have sent me an email or post response and I thank you, and I will need one more confirmation.

Those listed below do not need to re-confirm with me as we have had additional discussions with set-up and equipment.

I realize that some of this may be overkill, but then let it be my lesson to learn and I thank you all for your patience and expediency as we put this all together. The goal was to provide a wide variety of demos and exposure to amateur radio. Since we've never really done something like this before (at least in my brief existance) then we will find out what worked and what didn't, what was too much and what was not enough.

Main station:

Table: PR materials (I have some and Robert, k0rda made some great dual sided slips with club, and testing information, some SAME Weather radio codes, a few storm spotting books, and I found some weather related coloring books I can print out too. It has also been requested to have some membership applications available if people (hams) want to join. I will contact our secretary so see if we can do this.

Robert, k0rda will have his vehicle with 4 HTs - 1 weather radio to talk that up and storm spotting. 1 D-STAR on a reflector to get world wide traffic. 1 2m HT on a local repeater. 1 scanner on 800 MHz ARMER/Local LE, 4 Antennas on my truck - 5/8 2m, CB, Scanner, and 2m HT Kiss, style. I will put up my ananometer, have three lights going, and my signage.

There will also be a communications bus compliments of Peter, kc0tfb that I just heard about (thanks Peter and thanks for asking about this Robert). This will be a real treat.

Lastly, I will have a HF digital setup running PSK-31, John nz0s will bring his Flex Radio setup, and I will have my iPad showing it's SDR reciever app. If we could have some peopl showing off some of their android and iphone aprs apps, that would be good also.

Note: We've secured the club generator which will be utilized at the main station to keep the laptops and Flex going. Portable 20 meter antenna supplied by Niel, w0vlz.

Remote station:
Mel, kc0p will bring his rover vehicle and set up a remote station so that we can pass some radio traffic back and forth. Mel is going to use a similar script to what was used at Field Day.

Final Notes:

-As of right now I have only recieved one maybe two responses to get NBEMS going. I am tentatively going to scratch that from the demo unless I hear some definite commitments to get this going.

-Setup starts at 3:00 pm on Saturday, but may be delayed until later. I will get final details and post them later this week. I will also try to find out an exact location so that if you choose to, you can scope it out ahead of time.

Contact me to verify commitment and if you have any further questions or changes.

Thanks,
Rodney, kd0ebt

I will have the half sheet flyers, some SAME Weather radio codes, a few storm spotting books, and I found some weather related coloring books I can print out too. I am going to try to make a banner, but not sure how it will turn out.

Rodney

You will need an external antenna and coax for the Flex. Pat has some vertical dipoles in his shed. I suggest the twenty meter vertical dipole. Pat might have coax. Locate the antenna far enough away not to pick up noise from the building.

There are good afternoon and evening openings in 20 meters so that observers can watch John work some DX.

Good luck

Scott

I have the day off and will be there to help. Like I said I have minimal experince with NBEMS but if you have someone else that can do it too, I can give it a go. Otherwise I can be there just to be an extra person, and I'll bring my HT and have my laptop incase someone wants to do the NBEMS anyways, I don't have an APRS app on my phone, but I do have Echolink on it, so if we want to we can show how you don't even need a real radio to do it.

Robert, k0rda will have his vehicle with 4 HTs - 1 weather radio to talk that up and storm spotting. 1 D-STAR on a reflector to get world wide traffic. 1 2m HT on a local repeater. 1 scanner on 800 MHz ARMER/Local LE, 4 Antennas on my truck - 5/8 2m, CB, Scanner, and 2m HT Kiss, style. I will put up my ananometer, have three lights going, and my signage.

There will also be a communications bus compliments of Peter, kc0tfb that I just heard about (thanks Peter and thanks for asking about this Robert). This will be a real treat.

Lastly, I will have a HF digital setup running PSK-31, John nz0s will bring his Flex Radio setup, and I will have my iPad showing it's SDR reciever app. If we could have some peopl showing off some of their android and iphone aprs apps, that would be good also.

Note: We've secured the club generator which will be utilized at the main station to keep the laptops and Flex going. Portable 20 meter antenna supplied by Niel, w0vlz.

Remote station:
Mel, kc0p will bring his rover vehicle and set up a remote station so that we can pass some radio traffic back and forth. Mel is going to use a similar script to what was used at Field Day.

Final Notes:

-As of right now I have only recieved one maybe two responses to get NBEMS going. I am tentatively going to scratch that from the demo unless I hear some definite commitments to get this going.

-Setup starts at 3:00 pm on Saturday, but may be delayed until later. I will get final details and post them later this week. I will also try to find out an exact location so that if you choose to, you can scope it out ahead of time.

Contact me to verify commitment and if you have any further questions or changes.

Thanks,
Rodney, kd0ebt

I will have the half sheet flyers, some SAME Weather radio codes, a few storm spotting books, and I found some weather related coloring books I can print out too. I am going to try to make a banner, but not sure how it will turn out.

Have web links on the hand outs for the club web site, and other programs like D-star, NBEMS, echo link, and APRS.

How many table(s) do you need for this.

I need a final confirmation for those who can help out Saturday afternoon/evening at the Olmstead County Fair.

I realize you all have sent me an email or post response and I thank you, and I will need one more confirmation.

Those listed below do not need to re-confirm with me as we have had additional discussions with set-up and equipment.

I realize that some of this may be overkill, but then let it be my lesson to learn and I thank you all for your patience and expediency as we put this all together. The goal was to provide a wide variety of demos and exposure to amateur radio. Since we've never really done something like this before (at least in my brief existance) then we will find out what worked and what didn't, what was too much and what was not enough.

Main station:

Table: PR materials (I have some and Robert, k0rda made some great dual sided slips with club, and testing information, some SAME Weather radio codes, a few storm spotting books, and I found some weather related coloring books I can print out too. It has also been requested to have some membership applications available if people (hams) want to join. I will contact our secretary so see if we can do this.

Robert, k0rda will have his vehicle with 4 HTs - 1 weather radio to talk that up and storm spotting. 1 D-STAR on a reflector to get world wide traffic. 1 2m HT on a local repeater. 1 scanner on 800 MHz ARMER/Local LE, 4 Antennas on my truck - 5/8 2m, CB, Scanner, and 2m HT Kiss, style. 942. County Fair and next Tech class

Yahoo group: rochester_hams
Date: 2011-07-27 21:47:26 UTC
From: Bill
Topic: 942 Message: 942

Well, as it turns out, I may not be gone Saturday as previously planned.
I managed to do something funny and sprain my left knee yesterday. So far, it's not getting any better. I can't see trying to drive to California on one bad leg and another questionable one. I've also had to bail out on the MS-TRAM for today, anyway.

So, if there is anything I can do to help from home, I should be here. I could be one end of the NBEMS demo if you have someone on the other end. I can do DSTAR and probably anything else you think up.

I had two people call me the other day asking about classes. They were supposed to email me with their information, but that hasn't happened yet. I'm going to schedule a class for Oct. 22 and Oct. 29. That conflicts with the Mankato Marathon on the 22nd, but otherwise, I think we're all clear, and it gives them 12 days to study before our VE session on the 10th. I have reserved the classroom for those days, and I'll get the info to Darrel for the web page. I'll prepare a handout for the class if someone can pick it up from me.

From: luthsurgitech
Topic: 944 Message: 944

I have finalized location plans for our Demo for the Olmsted County Fair.

Set Up Time: 4:00 p.m. (not 3 like was previously announced).

Location: Grand Stand (out in the circle)
Talk In: 146.82 repeater

I would like to stage at 3:30 pm at the South Walmart Parking (Unless someone else has a better suggestion).

If you are coming late, tell the entry people that you are part of the Grand Stand show.

Please respond with any questions.

Rodney, kd0ebt

946. RARC at the Fair Follow-up/Debriefing

Yahoo group: rochester_hams
Date: 2011-07-31 16:11:53 UTC
From: luthsurgitech
Topic: 946 Message: 946

Most of all I want to thank k0rda, nz0s, kc0qgb, kd0ors and xyl to be, w0vlz, kc0wij, kc0p, k0rgr, kd0orm, kc0fow, w0stv, and ab0bw for their help in getting this project going in such short notice. It is also great to have some of our newer licensed hams jumping in there and helping out.

As one comment was made, this is even more like an EmComm drill than Field Day with the little time that we had to plan and put something together. Additionally, we identified the need to be very self-motivating, self-supporting, and prepared for such an event like this. There were a lot of very crucial lessons learned here that I would like people to share in responses.

Some of my lessons learned;

1. checklists, checklists, checklists. I had everything that I needed for my psk31 demo.... except my rigblaster NoMic which connects my transceiver to the laptop.I just tested it the other day, but in a motion of shuffling things around at my home, I set that very box in another place and forgot it. The good news is kd0ors and his excellent pizza delivery navigation skills got me there and back again in not time.

2. The importance of highly effecient portable antennas. Kuddos to Niel, w0vlz and his workhorse 20 meter c-pole antenna. I got good signal reports off of psk31 and I believe that it worked well for John, nz0s on phone... I think he got a dx. woohooo!!!

On the notion of portable antennas,when you don't always know what kind of structures or locations that you have to work with, having an arsenal of portable antennas/support/masts that has the smallest footprint possible and can essentially be self erected is important. Thank you to kd0orm for the help and work with my drive-over mast holder and my rotatable dipole assembly.

3.Headphones and speakers... man it was loud there with all the different demos and events going on.

4. We have a great group of hams with a lot of skills and knowledge to make things happen.

I appreciate everybodies patience and willingless to try things so we can find out what worked, what didn't, and what we need to tweek for the next time.

Also, thank you to the hams that stopped out to check us out and support us.

Please take this opportunity to leave feedback of your own.

If I missed someone that I need to thank, please let me know asap so I can recognize you also.

955. Wake Up Call

Yahoo group: rochester_hams
Date: 2011-08-16 15:27:25 UTC
From: Bill
Topic: 955 Message: 955

My phone woke me up this morning, but that's not too unusual. Since my wife works a late shift most of the time, we usually stay up pretty late, and the first marketing call of the day often wakes me up before the alarm goes off.

Today though, the caller was a young woman. She explained that she saw on our website that I teach ham radio classes. Her grandfather had recently died, and left a very large ham station. She wanted to know if I would want any of the equipment.

I offered to come by and look at it, and perhaps help her sell the items. So, I asked where she was, and she gave me the name of some lake I'd never heard of.

I then asked her what city it was near, and she mentioned some town I never heard of, either. Finally, it dawned on me - 'what state is that?' - "why, New York, of course".

I found her the name and phone number of the president of the Rochester Amateur Radio Association (not Club).

Why do I feel that today, William Osler is going to win the lottery someplace, but not here.

Don't forget the Thursday night digital net, 147.255 (PL100) at 9 p.m..

957. Monthly Activity Report

Yahoo group: rochester_hams
Date: 2011-08-19 14:05:20 UTC
From: Bill
Topic: 957 Message: 957

Here is the monthly ARRL Section activity report prepared by our Section Manager, Skip Jackson. If you're an ARRL member, you may already get this via email.

Each month, all of the different ARRL 'departments' within the section report to Skip - ARES, NTS, Clubs, etc.. All of these reports get bundled together into this publication. You might find it intresting to see what's really going on. Our public service numbers are inflated a bit this month thanks to MS-TRAM.

++ ARRL MINNESOTA SECTION SUMMARY FOR JULY 2011

This report is a short summary of Minnesota Section Field activities
for July 2011. For more news and other activities please go the
official Minnesota Section webpages at www.mn-section.org.

Submitted by Skip Jackson, KS0J, MN SM

++ ARRL AFFILIATED CLUBS IN MINNESOTA

Last month, we talked a bit about how difficult it is to find
volunteers to fill club offices and do just help out with club
activities. Two things have been brought to my attentions that are
also good ideas. First, many clubs have minor offices that can easily
be filled by the newcomer to get them started. Outside of the big
four, (President, V. President, Secretary and Treasurer) there may be
officer at large positions or committee jobs that they can fill to
introduce them to the behind the scenes of club operations. This may
get them interested in "Moving Up". Being an insider is
contagious.

The other thing is some clubs make the deadly mistake of being a closed
club at the board level, never wanting new blood with new ideas. This
can be the death knoll for a club, as the newcomer never feels really
wanted. When a club is too cliquey, when there are personal conflicts
or there is the loss of a key person the club may suffer or even die as
a result.

We have about 44 affiliated clubs active in Minnesota and that number
is growing.

Submitted by Frank Karnauskas, N1UW, Affiliated Club Coordinator

++ OO ACTIVITY IN MINNESOTA FOR JULY 2011

Minnesota OO's in action: WOØA, KØHB, NØOH, KBØOHI & WB6AMY
July reports received from NØOH, KB0OHI and WOØA.

++ SEC REPORT SUMMARY FOR JULY 2011

Total number of ARES members reported: 413

Local Net Names:
District 1 ☐ Goodhue County ARES, Mankato ARES, St. Peter Radio Club, Olmsted County ARES, Wabasha County ARES, SE MN Digital Net

District 2 ☐ Northern Lakes ARC, NE MN Public Service

District 3 ☐ Clay County ARES Simplex Net, Red River Net

District 4 ☐ Todd County Emergency Net

District 5 - Lac qui Parle County ARES Net, Minnesota Section/District 5 SEC/DEC Net, Murray County ARES Net, Sibley County ARES Net, Redwood Area Amateur Radio EM Net

District 6 - Anoka County ARES 2 Meter Net, Carver Co. ARES Net, Dakota ARES Net Skywarn Weather/Dakota County EM, District 6 Monthly EmComm/MHC net, BCG Sunday Night Net, Scott Co. ARES Net, Sherburne County Net, Washington County 1st Sunday net, Washington County 15th of the month net, Southeast Metro Amateur Radio Club (SEMARC) Net.
Total sessions: 98

NTS liaison is maintained with the MN Section Noon Phone Net, Minnesota Section Noon and Evening Phone Net, PICO Net.

Number of drills, tests and training sessions this month: 63
Person hours: 461

Number of public service events this month: 14
Person hours: 1346.5

Number of emergency operations this month: 39
Person hours: 281.75

Total number of ARES operations this month: 135
Total Person hours: 2121.25

County EC's Reporting:
District 1: Blue Earth, Goodhue, Olmsted, Nicollet, Wabasha
District 2: Crow Wing, Itasca, St. Louis-North
District 3: Clay, Polk
District 4: Todd
District 5: Cottonwood, Lyon, McLeod, Murray, Redwood
District 6: Anoka, Carver, Hennepin, Scott, Sherburne, Washington
Total Number of EC's Reporting: 22 of 39 (49 vacant positions)
Total Number of DEC's Reporting: 6 of 6

SEC Comments:
The SEC will be relocating home QTH from Southwest Minnesota to the west Metro beginning in September.

++District 1: In Goodhue County, 6 ARES members assisted with the YMCA Half Marathon in Red Wing. Nicollet and LeSueur County ARES assisted

with the Waseca Triathlon and attended volunteer phone bank training with Blue Earth County. Wabasha County ARES reports that their ARES net continues to grow with coverage from Winona to Red Wing and into western Wisconsin into Eau Clair. They also joined Olmsted ARES members in assisting the Ronald McDonald Cruise event. The MS-TRAM event was held in District 1 this year, with the crew of mostly Twin Cities volunteers assisted by many local hams, using 6 different ARES repeaters in various counties.
++District 2: No new news to report.
++District 3: Clay County ARES is doing some recruiting to get more hams involved in ARES and is also looking at new potential people to get their ham license. In Polk County, there were 22 call-outs to the NWS during the month.
++District 4: No new news to report.
++District 5: Murray County ARES had 6 members participate in the "Days of `87" 5K run.
++District 6: No new news to report.

EC's must complete their FSD-212 form and submit it to their DEC's (or the SEC if there is no DEC) by the 2nd of the month. DEC's must submit to the SEC by the 5th of the month.

An explanation on how to fill out the FSD-212 form can be found at www.MinnesotaARES.org.

Submitted by Dan Anderson, KD0ASX, MN SEC

958. New DSTAR Radio?

Yahoo group: rochester_hams
Date: 2011-08-19 14:06:49 UTC
From: Bill
Topic: 958 Message: 958

It's on sale in Japan, we can only hope it makes it's way here. It's a UHF-only HT, that's also waterproof. http://www.universal-radio.com/catalog/ht/2031.html

961. Do-it-yourself DSTAR radios

Yahoo group: rochester_hams
Date: 2011-08-23 16:56:30 UTC
From: Bill
Topic: 961 Message: 961

The presentation on this web page details three ways of making your 9600 baud capable analog radio work on DSTAR. http://www.k6jm.com/hotspot/Pacificon2010Oct16K6JM.pdf

One of the methods is to use a PC and a simple soundcard interface on a 9600 baud capable radio.The author notes that this is not a very stable solution, even if it is cheap. Next up the foodchain would be using the computer to create DV audio to feed a GMSK adapter that formats the DV audio for DSTAR - and then feeding a 9600 baud capable radio. Finally, there are several DV Adapters out there that will convert anaolog audio to digital, which can then feed a GMSK adapter and analog radio.

I've heard at least two people using the DV adapter and GMSK modem with analog radios, and if anything, they sound better than the ICOM rigs. One guy was using a TS-2000.

The author of that article is also offering a new GMSK adapter for $119 - not a kit. http://www.moencomm.com/ The adapter can be used to build a hotspot, a repeater, or a DSTAR transciever with the addition of a DV adapter of some kind (or a PC).

Now, you have a 100% non-ICOM DSTAR radio. I'm thinking about getting the hardware and trying it on my TM-D700, but it may have to wait a while - I've spent my radio budget for the time being.

962. Re: [rochester_hams] Do-it-yourself DSTAR radios

Interesting I am going to have to try the low end budget.

I would like to get your input on a base station as I am going to look for a used one for now and I want to start searching to see what is out there so I will know when I find a deal as I am in no hurry to purchase at this time just want to get the information so that I know what I want. If you need some help at any of the ham classes let me know and I will help out.

If I'm reading the website right, the DV Dongle is required for anything, including the "cheap" soundcard interface. The DV Dongle seems to be $200. Right? Not exactly free..... I still haven't seen a package for DSTAR that I find attractive.

965. Binary Transfer test

Yahoo group: rochester_hams
Date: 2011-08-26 19:40:47 UTC
From: Bill
Topic: 965 Message: 965

John, NZ0S, sent me a binary file last night on 145.07.

The good news is that the 53K file came across just fine. I have a nice little jpeg file on my desktop now.

The bad news it took about an hour and a half. At least using FLARQ, it breaks up the file into lots of small blocks and ID's your station at the start of each block and each ACK, so you can let it run forever and still be legal.

I think if we play around with this, we can improve on that quite a bit.
We were using PSK500R protocol which has a lot of FEC redundancy in it, which is probably not needed. There is also some other overhead I know we could turn off for the file transfers.

967. Message Traffic Forms

Yahoo group: rochester_hams
Date: 2011-08-29 02:16:03 UTC
From: Bill
Topic: 967 Message: 967

Here are three documents relating to the ARRL NTS format messages, and also ICS Form 213 messages that we would expect to use for most local, tactical messages:

http://www.arrl.org/files/file/Public%20Service/radiogram2.pdf

http://www.arrl.org/fsd-3-arrl-numbered-radiograms

http://www.arrl.org/fsd-244-amateur-radio-disaster-welfare-message

http://training.fema.gov/EMIWeb/IS/ICSResource/assets/ics213.pdf

In a disaster, we would want to use NTS format for messages going out of the area via the NTS nets.

It would be a good idea to print off some of these and have them in your 'go' kits. You need to take a little time to understand how words are counted in an NTS message for the 'CK' field. One nice feature of the NBEMS software we're using is that it calculates the CK for you.

968. MT-63/2K for Android

From: Bill
Topic: 968 Message: 968

OK, I've been waiting for this to show up.

http://www.appbrain.com/app/mt63-2000/net.thinkindifferent.mt63

I installed it on my HTC Incredible, and it works fairly well. It seems to send better than it receives, but that's probably a matter of getting the levels right, and there don't seem to be any adjustments.

Hopefully, this app will grow over time. It would be great if somebody would port the best parts of NBEMS, so you could compose a text message in NTS or ICS format and send/receive it from the phone. That way, in a disaster, you only need your smartphone, not a PC.

Topic: 972 Message: 972

Recently I stumbled across HAM Nation, a weekly on-line video show about ham radio. See http://twit.tv/show/ham-nation

"Bob Heil, with various co-hosts and guests will cover the excitement and importance of ham radio - from tossing an antenna wire in a tree allowing you to talk to the world, to the importance of ham radio operators in time of disasters."

Interesting episodes include information about the record breaking W3AO Field Day operation and the involvement of ham radio in Hurricane Irene. There's also a lot of basic how-to information presented.

I have recieved boxes of radio related items to dispose of for Roger Kroupa. I will bring them to the club meeting this Tuesday. Cub members can pick through, and take home what they want. There are antenna's, cable ends, grounding straps, adapters, radio holsters and many other items.

Roger has also donated soldering irons, diode testers and other items to the club. I will get these to Bill Osler for future kit building programs.

Roger gave me the club Jin-Pole. We will store it somewhere for club members to use. A discussion for the meeting.

Topic: 975 Message: 975

I haven't been on the air much lately, as we've had a busy summer moving and getting things done at the hotel. I have my base set up - a Yaesu FT-2900M 75w mobile with a power supply, a good yagi compliments of KI7K, and 40' 3/8" line. The hotel is 3 stories high, so I have okay height, but the downtown buildings blocking me somewhat on the west side. I also have a 700w wind turbine, with 3 deep-cycle batteries that I run lighting and computers from. The interter is a 1500w pure sinewave, fan cooled when necessary. The charge controller for the turbine, the batteries and inverter are in the unused elevator car that's parked at the 3rd floor. Everything comes in through the access to the elevator pulleys and into the car itself. My next step is to install a couple of 100w solar panels to make up for when there's little wind to get the turbine up to charging speed. Generally it starts charging when the wind hits about 3 mph. Believe it or not even 40+ feet in the air, the wind is still some days downtown. Now if I could just put it on top of the new Broadway highrise, there'd be plenty of wind.

I hope everyone had a good summer; I look forward to getting back into the hobby and public service events. 73's all!

From: Steve Wiebke
Topic: 976 Message: 976

As a member of the the portable tower repair committee that was formed two months ago, I am asking for input from the club on what we should do about the large portable trailer tower. The cost estimates for fixing the current problems and retrofitting it for safety will be around $1300.00. This would make the tower DOT qualified, and bring it up to standards for extending it to its full length. We have never done this due to safety concerns. The tower as it sets is not usable.(cracked welds) Please reply with comments pro and con on this club issue. It will be discussed at the club meeting on Tuesday. If you want to contact me in person call 254-3993 for more information. Thanks for the feed back I have recieved already.
Thanks for your time

I think the tower is a big asset for the club, and it needs to be repaired. If it can be made better and safer at the same time, that's a good thing. As it is, we could never use it in a disaster situation, either. If it were safer to use, perhaps there would be interest in using it for other events, like the VHF Contests. If the cost of doing this is a big problem, we could take up a special collection like we did when the repeaters needed replacement.

I don't know where I'll put the stuff, but I will try to find a place. My garage is a disaster zone. I finally got the big HF rig back on the air yesterday.

Does anybody want an old Heathkit oscilloscope? It is in need of repairs, but at least it comes with the manual.

I think we do want a portable tower like this, so repairing it makes sense.
Is there any hope of finding something something similar for cheaper? I
saw an offer for a 50' tower on a boat trailer just last week, on the
Tower-Talk mail list. That was for $1200, but then it was in Florida.

I realize I'm not a current member of the club, so my thought might not mean anything, but I would repair the tower. That would make a good club project for a Saturday. I'd help - just let me know

The capability of the tower, especially once repaired and enhanced with the work Steve described, will give the club an edge if there is truly a major communication outage. It has proven itself in many field day operations, and once folks felt safer deploying it, the use would go up. I wholeheartedly approve of Steve’s plan for upgrading the tower. Let’s make it happen!

As a member of the the portable tower repair committee that was formed two months ago, I am asking for input from the club on what we should do about the large portable trailer tower. The cost estimates for fixing the current problems and retrofitting it for safety will be around $1300.00. This would make the tower DOT qualified, and bring it up to standards for extending it to its full length. We have never done this due to safety concerns. The tower as it sets is not usable.(cracked welds) Please reply with comments pro and con on this club issue. It will be discussed at the club meeting on Tuesday. If you want to contact me in person call 254-3993 for more information. Thanks for the feed back I have recieved already.

I agree with Pat. I emailed Steve earlier and he is free to share my advice to all if he chooses.

It makes sense to repair it.

Kind regards,

Scott Wright

Roger Kroupa is moving. He gave me boxes of communications items to bring to the club meeting to give away. There is so much stuff I had to empty the truck bed to have room for it. Do not miss this this Christmas in September event. Fuses, pouches, antennas, power supplies, cables.....and more.

PS: I could use help to carry it into the class room.

I'm on a mission to clear up all my medical bills, and I also don't want my comm trailer just sitting at the hotel not being used. I'm putting it on the block for $500.00. I have done a lot of updating on the electrical wiring, including a 60amp breaker panel; 5000btu a/c built in where the refrig used to be. A compressorless refrig (new), rotor for a beam, WS-2210 weather station with rain guage and annamometer; wi-fi grid antenna. Just those accessories are nearly $500.00

If you're interested, please contact me at 722-1290

I agree with the general consensus and think we should repair the tower. Don't remember who said it, but a special collection (or even pledge over time) I feel would be the way to go to get the funds needed. I know I would be contributing either of those ways.

I agree with the general consensus that we should get it repaired... or do something. From the discussions I can see two tracks of conversation. One being get it repaired and secondly get it repaired with the intentions of optimization for EmComm. Gil made an excellent point... have we researched what it would cost for a whole new one. Also... have we thoroughly looked over the tower to make sure that we've covered everything. The last thing we need is to put 1200 or whatever into it and find out we need to fix something else that we missed. My thought would be to seek additional bids, do we want to repair the antenna or do we want to add additional things to outfit it as an emcomm package.

I wonder if it would be helpful as a club to decide what we wanted first... and then seeks bids accordingly. Food for thought.

991. Trailer - Tower

Yahoo group: rochester_hams
Date: 2011-09-13 20:16:22 UTC
From: Scott Wright
Topic: 991 Message: 991

Rod

You have summarized the "reply to all" email nicely.

Crank ups are expensive so I cannot imagine we would get one for under 2K.

Here are listings from one US dealer for a tower like what we have, new of course:
TMM-433SS 11'4" 33' 4 18" 10" 315 4' x 4' x 4'6" 18 sq. ft. $1,949
TMM-433HD 11'4" 33' 4 21.5" 12.5" 400 4' x 4' x 5' 24 sq. ft. $2,339
TMM-541SS 12' 41' 5 21.6" 10" 430 4' x 4' x 5' 18 sq. ft. $2,529

I agree that we need to be sure that whoever is giving us the bid for repairs actually works on towers and will be bonded and certify it as usuable. Otherwise, the club has a big liability.

I think the club could raise donations from area businesses if we marketed the project properly as an Em Com and portable event station. We could probably raise 1500-3500 that way and even consider buying a new tower or tower-antenna to go with the system.

My suggestions:

First, now is the time to think more broadly than "just how do we get it fixed" kind of thinking. We are notorious about doing everything on a dime but sometimes it pays to do it right the first time.

I think we need to brainstorm about how we will use this - it will be an HF or HF/VHF system. What are the possible uses of it?

1. Field day
2. Support antenna system for school club activities
3. Emergency communications needs
4. Public demonstrations, like at the fairgrounds or other events.
5. Club or member based contesting activities, especially for groups where they are portable or several club members do not have towers or antennas and want to "borrow" one.

It might be worthwhile discussing this aspect at the club meeting.

Second, I suggest the club put together a group of members who actually have experience of owning and maintaining towers. All of us have opinions about what should be done and everyone has an equal vote. But, not everyone has equal expertise or insight into how to maximize this project or make the most of it, or what are the safety issues around a towable, crank-up tower.

We need to take advantage of the local expertise of guys who own or have owned towers and let them advise the club on what to do. That way, we don't make a financial mistake by rushing the project or simply 'just get it fixed' without considering how it fits into the long-term future of the Rochester amateur radio club.

Third - safety. We need to consult the printed material from the ARRL on tower safety. I recommend Don Dazso's book on towers. It is inexpensive and contains a lot of safety information for all types of towers.

Fourth, we might want to pay a local tower company to inspect it and get an independent, third party opinion about its condition. They can understand that if we replace the tower we are NOT buying from them so there would be no financial incentive to tell us it is bad so we spend money with them. Fourth, is the trailer the right platform for this tower and the load we are putting on it? Can the trailer support a tribander and rotor? Should we restrict how big any yagi is that will go on the tower? Will it hold 8 sq feet or 12 sq feet? We don't really know I imagine?

Scott, K0MD

From: Steve Wiebke
Topic: 992 Message: 992

Here is a recap of last nights RARC meeting on the tower issue:

1. There is no rush for this project. But it will be discussed each month.
2. Can we find military surplus to replace it for less money since it only has been used for field day for years.
3. Is there a liability for the club on the towers use after repairs and retrofitting.
4. There may be a way to retrofit the tower cheaper than the last estimate. Some free materail has become available for this.

Steve will keep moving forward on the tower repair. Grant will be looking at replacement towers. Both will report back in the October meeting

If anyone has information regarding this project contact Grant or Steve through the club reflector

994. Military Surplus Masts

Yahoo group: rochester_hams
Date: 2011-09-15 02:40:37 UTC
From: Grant Kesselring
Topic: 994 Message: 994

Hi folks,

At the club meeting yesterday, Steve W0STV asked if I would research surplus military masts as an alternative to fixing the tower trailer.

So here is an update to let you know what I've found so far on pricing/availability. Two options exist that have become favorites by ham radio clubs for Field Day, etc. They are: AB-577 and AB-621. For a description and pictures, visit: http://www.ontariosurplus.com/masts.htm

I have an inquiry into Ontario Surplus regarding pricing and availability for either the AB-577 or the AB-621. Both are about 50' masts and would be ideal for a Field Day arrangement where the requirement is supporting a small to medium array of HF antennas. I will let the group know what I find out from Ontario Surplus if/when I get a response.

As for the used market, these things have become quite popular over the last 5 years so they are hard to come by. A quick search on ehams.net shows that approximately six have been sold used over the last five years. They are going anywhere between $500-1000. They weight about 300lbs and the longest section is 5'.

Thanks,
Grant K1KD

Grant,
  A complete AB-577 is about $1200, a complete AB-621 is about $1800. I also have the AB-621A and most of an unused extension kit for 100' if you have a serious budget. Any of these masts are outstanding for portable operations with fairly large antennas. I'd be happy to discuss the options further if the prices are in the range of your budget. I am also happy to help if you find most of a mast somewhere else and need parts. I am best reached by phone 7-9pm ET and will also be around at times this weekend. Let me know if there is a specific time that you'd like to schedule a call.

All,

As I shared with you at the September meeting, I have been looking to move to the Green Bay Appleton area. Well I was offered last Friday and accepted a Surgical Tech position in Appleton, WI and my last day of work will be October 11th. I should be able to make part of the meeting that evening, but I need to leave because I have a pre-employment meeting the next morning.

You all have been and still will be a great influence on me as I grow and learn in amateur Radio. Thank you and 73'

We'll be sorry to see you go, Rodney, you've been a sparkplug for the radio club for quite a while. I will have to miss the meeting on the 11th, but look forward to hearing you on the air. I am QRV on JT-65HF and PSK31, mostly on 20 meters with my FT817. Find the local DSTAR repeater, EchoLink, or IRLP and check in with us.

1012. Half Marathon Needs Volunteers

Yahoo group: rochester_hams
Date: 2011-10-06 15:25:19 UTC
From: Bill
Topic: 1012 Message: 1012

I got this from the Sibley County EC this morning:

Hello DEC's J

We have a need for 5 ☐ 7 radio operators for this half marathon this Saturday 10/08 from 8 AM for setup and Half Marathon starts at 9 AM and hopes to be done by 11 AM. Chris Zellman - KC0RIS is the lead on this one from Carver County ARES and they need operators for this Half Marathon from Belle Plaint down the Minnesota black top to Blakely Corner then back up the south side to Belle Plaine. This event will run SIMPLEX 147.470 and they have tested the whole course tonight on 5 watts and reports all is signal go for now.

If you have anyone who would like to come on down .we would love to hear from them. If anyone wants more information, they should seek out Chris at: 952-913-6580 or email: kc0ris1@... .

Thank you in advance

1013. Warren, K0TMU - SK

Yahoo group: rochester_hams
Date: 2011-10-06 15:44:22 UTC
From: Bill
Topic: 1013 Message: 1013

I just found a notice on a DSTAR group that Warren, K0TMU, passed away yesterday at 83.

Warren was a frequent visitor to Rochester, and was often heard on the DSTAR repeater. He had his own non-ICOM DSTAR gateway in Mason City, and had just recently converted it into a full fledged DSTAR repeater.

From: Bill
Topic: 1016 Message: 1016

There is currently a fire in LeSeuer County that has consumed 500 acres, including at least one farm. Nine fire departments are deployed to fight the fire, and they are using heavy earth moving equipment.

I was contacted by Blue Earth EC Steve, WA2OFZ, who had received an email from KC0ESE, Paul in St. Paul. Paul is a volunteer with both ARES and with Salvation Army. He was contacted late this afternoon by Salvation Army, asking if he could get ham volunteers to help with SA rellief efforts "in the Mankato area". We have since determined that the Le Seuer County fire is the one involved. As of now, SA does not intend to deploy tonight, but may do so in the morning.

Sibley County EC Don Burgess, KC0QNA, has organized a response team in LeSeuer County. Don has been in contact with the Emergency Manager there. At this time, they have asked us to be on standby, in particular for next week if the current weather conditions continue. You can reach Don at his cellphone, 612-578-7561.

With the current 'tinder box' conditions - warm, dry weather with very high winds, we all need to be ready to respond if needed.
Please pass this on to your teams. These conditions are forecast to continue through at least Monday.

I can be reached on my cellphone at 507-251-5921.

Seems hard times have hit pretty hard here. I am trying to find a new home for my Yaesu FT-60r for maybe $140 so I can run up to minneapolis for some job interviews Monday. Works great, comes with the stock antenna, looks like its been used, and has been modified by me (that way I know it was done right). The stock charger failed so I won't be including that. I will include the AA pack if I can find it along with the original battery (cycled regularly). If interested please email me or call 6083994252.

I'm getting ready for this year's AWA Bruce Kelley / 1929 QSO Party (see http://www.antiquewireless.org/hamevents2010.htm and http://www.prismnet.com/~nielw/1929Stn/1929Station.htm).

I need someone to listen to my CW signal on 40 mtrs to let me know how it sounds.

Should only take a few minutes.

Volunteers?

73,
Niel - W0VLZ

Dave,

I'll be up in the cities tomorrow morning but thanks for the offer, I'll need to take a rain check.

With me running just 1-2 watts out on 7115 I ended up working a guy in Ohio . He gave me a 555, oops. Said I was solid copy but had a low frequency growl on my signal. Now I'm trying to figure out why the rig sounds fine into a dummy load but not when into a real antenna. I may have to stick to 80 mtrs.

Niel

1030. Congrats RARC 2011 Field Days

Yahoo group: rochester_hams
Date: 2011-11-10 01:53:54 UTC
From: K0VH
Topic: 1030 Message: 1030

I wish my QST came a day earlier, we could have mentioned this at the RARC club meeting last night.

MAIN HF STATION W0MXW places 2nd of 6th in MN in class 3A only beat out by Twin Cities FM club W0EF, 3rd in MN in all cats with 8808, 19/394 total 3A North America. Congrats to that RARC team!

RARC QRP station W0LLN takes 1st in 2AB (but only 1 in 2AB), score 3405 is 9th in N Am in that category.

I see W0SAA from Schafer in there as a 1D station too.

I have a bunch of "late model" ARRL QST magazines I would be willing to give away.

I'd prefer to donate 6-12 issues at a time, but have held a few issues for myself (eg, the one reviewing my main IC746 rig). The main packs of issues are from around 2000 - 2007.

Feel free to send me a direct email if you are interested k0vh@...

Don Burgess, KC0QNA, is looking for help with this event in Arlington, MN. on Dec. 3:

"Hello Everyone:

Here is what I have for people who said they can come and help out with the Arlington, MN X-mas Parade.
*****Parade Meeting - 3PM Arlington Lutheran Church - 1 block south of Cenex Gas Station on Hwy 5 - Cookies, Coffee & Hot Chocolate will be provided for all volunteers*****
Parade Line Up - 4:30 PM - 5:30 PM
PARADE BEGINS 5:30 PM - 7:00 PM
Hams are needed for Net Control - 3 Shadows for: Parade Director, Emcee of Parade and Police Chief - Plus 10 - 20 additional operators for Line up and course and coralling exiting participants back around to the line up area."
Contact Don via email thelostiowan@... if you want to help.

1038. Ham Radio Licenses Top 700,000, An All-Time High

Yahoo group: rochester_hams
Date: 2011-11-22 19:05:11 UTC
From: Jamie Ivanov
Topic: 1038 Message: 1038

Velcroman1 writes "The newest trend in American communication isn't another smartphone from Apple or Google but one of the elder statesmen of communication: Ham radio licenses are at an all time high, with over 700,000 licenses in the United States, according to the Federal Communications Commission. Ham radio first took the nation by storm nearly a hundred years ago. Last month the FCC logged 700,314 licenses, with nearly 40,000 new ones in the last five years. Compare that with 2005, when only 662,600 people hammed it up and you'll see why the American Radio Relay League -- the authority on all things ham -- is calling it a 'golden age' for ham. 'Over the last five years we've had 20-25,000 new hams,' said Allen Pitts, a spokesman for the group."

1041. Re: Digital Net Reminder

Yahoo group: rochester_hams
Date: 2011-11-23 18:06:46 UTC
From: john_nz0s
Topic: 855 Message: 1041

This is a pretty cool net, very useful. You can check in using phone if you aren't yet running digital. It's hugely helpful for learning and optimising your digital set up and modes.

If you ever have to send real ARES traffic then digital work like they do on this net is the way to go.

1042. MN QSO Party February 4th

Yahoo group: rochester_hams
Date: 2011-11-24 18:21:25 UTC
From: Bill
Topic: 1042 Message: 1042

This year, we're trying to get all ARRL appointees and ARES members to participate in the Minnesota QSO Party on February 4th. Of course, the contest is open to everyone.

There is a VHF category in this contest, and a couple of mobile categories, so everybody can participate.

Here's an opportunity to find out how well you can talk to the rest of the state of Minnesota. The goal is to work as many Minnesota counties as possible.

You will find the rules here:
http://www.w0aa.org/index.php?option=com_content&view=article&id=8&Itemid=9

1045. New Hams/Members - 10 Meter Contest

Yahoo group: rochester_hams
Date: 2011-12-02 00:37:45 UTC
From: Bill
Topic: 1045 Message: 1045

Welcome and congratulations to Scott Rick, KD0PZK , Bob Winkler, KD0PYU, and Peter Crowley, KD0QBT. These gentlemen completed our Technician class last month, and passed their exams. They get a free RARC membership for one year, too.

On the topic of newcomers - is there any interest in the 10 meter contest the weekend of December 10th? The contest starts at 6 p.m. Friday night and runs until 6 p.m. on Sunday.

If people are interested, I'd be willing to run a multiop from my heated garage in the daytime Saturday and Sunday. At this point, all I have up is a dipole and a vertical that isn't great on 10, but that might be enough in this contest. This would be a chance for Techs and people who don't really do contests to get some experience.

There's no need to bring your gear - my IC746 will do it, and I really don't have room for another radio in the shack right now. I did OK on 10 in the Sweepstakes contest with the

dipole - it's oriented so that it favors the east and west coasts. DX might be another story. I did work stations on all continents on 10 in the DX contest, but it was not always easy. CW QSO's count 4 points in this one, so we will want to take advantage of that.

I haven't downloaded the N3FJP logging software for the 10 meter contest yet - I presume it supports CW like his other programs do. If so, we'll be all set with everything programmed into it, so you should be able to send everything that's needed from the keyboard function keys. I will also see if I can get my RigBlaster hooked up so you can use 'CWGet' or FLDIGI to copy their exchange.

No, I haven't had anyone else express interest, and I think I'm going to have to back out of it. My wife has too many 'honeydo's for me that weekend. She expressed her lack of enthusiasm for my hobby by piling a huge pile of junk in the middle of my shack, on top of the workbench and some of my gear. It will take me a long time to unbury it.

1054. REMINDER-10m net tonite Tue 8pm CT ... topic: 10m contest this weekend

Yahoo group: rochester_hams
Date: 2011-12-06 15:05:46 UTC
From: K0VH
Topic: 1054 Message: 1054

Just a reminder the Rochester/SE MN 10 meter net is tonight Dec 6 at 8pm CT on 28.325 mhz. I swapped with normal net control AB0BW and will call for phone checkins starting at 8pm. This is an informal net where we give each checkin 2 or more times to ask questions or comment on their recent ham radio or other activities. The net goes at least 20-30 minutes so even if you are late just put your call out between contacts. (Note we meet every Tue except when there is a RARC meeting such as the holiday party next week).

There have been plenty of recent posts on the upcoming 10 meter ARRL contest. I would like to encourage all area hams on this groups forum to checkin and we can discuss some tips on operating this contest tonight.
The exchange is very easy: W/VE stations (including Hawaii and Alaska) and Mexico send signal strength RS(T) and state or province. DX stations (including KH2, KP4, etc) send RS(T) & sequential serial number starting with 001. Technicians can operate SSB phone from 28.3-28.5 and it's very easy to contact other stations calling "CQ contest" and give them a "59 Minnesota" report. All you need is a HF transceiver covering 10m and a dipole: two ~8 foot wires fed with coax even 15 feet up will make contacts!

For pre-reading or if you are unable to make the net tonight there are links to get more data

I don't have the exact numbers for consumption, but I would expect it to be a pretty fair amount. I would *assume* a minimum of 700 watts needed by the device.

Topic: 1061 Message: 1061

I have a Trimble Placer 450 GPS receiver with the proprietary power connector removed. Just add a gps antenna, 12v DC, and a device that takes NMEA over RS-232 (db9 serial). I believe I have it configured for NMEA, free config utility is available on the Trimble website. Maybe $20? Give me a call :)

From: Bill
Topic: 1062 Message: 1062

I've finally decided it's time to start our HF Digital Net.

The frequency will be 3583.5 USB, with an audio frequency centered on 1000 Hz +/- QRM, using the Olivia 16/500 protocol. The time will be 8 p.m. local time - one hour before the VHF net on 147.255 on Thursday nights.

I'm trying to emulate what's been successful for the SATERN NBEMS nets, as well as what they're doing in PA.

Hopefully, we'll see you on one of the two nets or both!

Tonight is the annual Christmas Party so we're meeting for dinner at the Olive Garden. We're all going to order from the menu starting at 6 p.m., and we can be there until 9. People will be bringing 'show and tell' items, and we are having the annual election of officers.

Our meetings are normally at RCTC, but August and December meetings are usually held elsewhere - the club picnic is normally in August.

"Passive repeater" sounds contradictory. Do you mean a passive antenna feed, like two high gain antennas linked together, one outside to one inside? The problem with that is the signal outside isn't super strong either so the need for an actual powered booster/repeater is more of an actual requirement.

You know that whole think before you post thing.... well I;m not very good at it.

I do not have what you are currently looking for. However, while researching cell repeaters I have come across the Idea of just building yourself a high gain yagi for the band, or multiple bands, that you desire and pointing that at a tower. Then run coax to a low gain omni near the location that you will be using the cell phones.

I'm running into a growing issue... I'm running out of containers to store my caps and other parts. I've been moving up sizes and wondering, what's the best containment device to use while keeping some element of potential portability. Keep in mind some caps can get someone decently sized. I don't think a normal tackle box would cut it. Thoughts? Anyone have anything to spare?

Also, what would be the most efficient organizing method? By capacitance, by voltage, or grouping same voltages of different capacitance?

I'm also looking for more motherboards, LCD's, stereos, etc to harvest components off of if you have something to spare.

I would recommend the "Now You're Talking" book which can be found for $20 new (I think) and less used. I don't even know if it is still in print, we're talking 13 years ago when I upgraded to my tech license (when I was 13).

1079. Binding plastic to a smooth spindle

Yahoo group: rochester_hams
Date: 2012-01-06 23:21:21 UTC
From: Jamie Ivanov
Topic: 1079 Message: 1079

I'm currently working on a dvd player and the last thing I need to do is fixate the plastic disc holder to the smooth metal spindle of the motor. Any ideas?

Its a semi-tight fit but putting a disc on easily pushes it out of alignment. Its too tight of a fit for my welding glue. I've tried the glue and it helps but it's not a good solution.

Jamie,

Typically, plastic bits are fastened onto shafts by friction. Can you control the bore or shaft size? If so, figure 0.0005" for every inch of shaft diameter. If you drill it yourself, remember that the drill bit will cut a larger hold than you want, so start 1/16" smaller and work up to the right size. For a small plastic part like this, I'd shoot for 0.001 interference (shaft dia - 0.001) and just press it really hard.

I've also had good luch with a hole through the saft and plastic part in the radial direction. See, the plastic won't hold a set screw very well and it'll creep. Instead, drill a small hole, as though you were going to use a set screw, and use a roll pin to secure the part onto the shaft.

You can also file the shaft to roughen it up, then use epoxy... I'd try everything else first, though. Adhesives (including duct tape) are usually weak and unreliable. And they often leave a mess.

All very enticing ideas! I'm worried about drilling the hole to a bigger size though, considering this will hold a disc and needs to be balanced perfectly. Increasing the hold diameter, if done perfectly straight, would leave "wiggle" room even if an epoxy is used which would risk the disc not laying perfectly level. Or did I miss something in what you were saying?

Most of my experience is with much less sensitive systems, for You may
need to employ a machinist. In a proper shop, they'd drill the approximate
hole size and get it to the exact diameter using reamers. They can do this
in a lathe, which will ensure that the hole is perfectly centered.

But the problem is still the hole will be wider than the shaft of the motor spindle, that's going the opposite direction that I need.. With a larger hole, epoxy would let the plastic piece dry/bond unlevel..

From: Kevin Neff
Topic: 1079 Message: 1084

Oh. I went back and read the rest of your first message.

Maybe drill it out and make a tight-fitting metal insert for the center of the plastic piece. Then you can use a set screw to hold it on the shaft.

1085. Red Cross Courses

Yahoo group: rochester_hams
Date: 2012-01-16 14:43:16 UTC
From: Bill
Topic: 1085 Message: 1085

Robert, K0RDA, requested information on training for the Rapid Response Teams that are being formed.

Sepcifically, RRT members are expected to be registered with Red Cross as volunteers, and should complete as many of their 'DST' courses as possible. There are also several standard RC courses that would be good to have. The DST classes can be done online. RRT members should have completed ICS 100 and 700 from the FEMA website, too.

Barry Altman, W6GFN, provided us with this list of upcoming DST classes:

DST Overview -1/28, 2/21,3/3, 4/11
DST Communications - 1/29,3/4,3/20, 5/9
DST Customer Service - 1/28, 2/28, 3/3, 4/18
DST Networking - 1/19, 1/28, 3/3, 3/6, 4/25
DST Computer Operations - 1/26, 1/28, 3/3,3/13,5/2
DST First 48 Hours - 1/29, 2/16, 3/4, 4/3, 5/23
DST TIMS - 1/29,2/9,3/4,3/27, 5/16

The first 5 of those are the most important for RRT.

There are also several standard Red Cross courses, including First Aid and CPR, Psychological First Aid, Mass Care, Logistics Overview and Simulation, and Shelter Operations that would be nice to have.

According to Barry Altman, you become a Red Cross volunteer and they will provide you with a signon for the online courses. I haven't done any of them myself that way - I've only taken their courses in person.

From: Peter Crowley
Topic: 1085 Message: 1088

All,
This is Peter, KD0QBT.
I am fairly active with the Red Cross and can give some advice for obtaining training. First of all, all the training is provided without cost to you as volunteers. This includes classes that are disaster related as well as CPR and First Aid classes.

To become a volunteer for the Red Cross, you must fill out an application, have your picture taken for your ID badge, and fill out a simple online background check that the Red Cross uses to ensure that it does not put pedophiles in charge of sheltering children.

You can start your paperwork with an online form found here:

http://www.redcrossmn.org/general_calltoaction.asp?CTA=3&SN=14835&OP=15281&IDCapitulo=7K58A866M7

With the paperwork behind you, you would be considered a Red Cross volunteer and able to start your training. There are many avenues of training available, but for amateur radio operators, you would most likely be interested in the Disaster Service Technology (DST) courses and the Disaster Assessment (DA) courses for people already doing skywarn, etc.

The other classes listed are basic overview classes for other areas of the Red Cross that would help you understand a general overview of the types of services that the Red Cross offers during a disaster and will help familiarize you with some of the terminology and a few key acronyms.

The FEMA classes can be taken at any time and can be taken by anyone, not just registered volunteers. I recommend starting with IS-700a first, since it is an overview of the system, and following that up with one of the IS-100 classes. All the IS-100 classes cover the same material, but are tailored to specific audiences, like Law Enforcement, Public Schools, Hospitals, etc. If you don't have a specific reason to take a tailored class, the generic is IS-100b.
These classes can be found at this site:

http://training.fema.gov/IS/NIMS.asp

On behalf of the Red Cross, thank you to all the folks interested in being part of the Rapid Response Teams and Damage Assessment teams. Your help in these areas will make a big difference in how rapidly the Red Cross can respond to a disaster in our local area.
-Peter Crowley, KD0QBT

1090. Giveaways and MN QSO Party

Yahoo group: rochester_hams
Date: 2012-02-04 21:47:07 UTC
From: Bill
Topic: 1090 Message: 1090

Taking the last item first, I heard very weak MN stations on 20, 15, and 10, but no QSO's from out here in San Jose. One station responded "K0R? nil copy" on 20. Overall, signals were very unstable. I heard someone very strong on 10, but before I could tune my antenna, they were gone.

Giveaways - assuming that the rigs actually show up and actually work, I'm planning to GIVE AWAY two 10 meter radios at the next club meeting.

In order to be eligible for a free rig, you must:

1. Not currently have an HF rig

2. Be licensed (any class)

3. Agree to put the radio on the air within one week, and to check into the Tuesday 10 meter net as soon as possible, or otherwise show proof of using the rig ...

4. Agree that if you acquire another 10 meter rig, you will bring this back to the club for someone else to use ...

5. Be a paid up RARC club member.

Conditions on 10 have been ragged lately, but the band is opening up sporadically.

The radios are a Radio Shack HTX-100 and HTX-10 that I bought on EBay.
Assuming the radios arrive, I will check them out when I return. I hope they haven't been converted for 11 meters, but the ads said they had not, and 'work great'. You can usually find these for under $100, but I got bid up a little on these. I could have bought a used dualband 10/12 meter Ranger for $129 from a ham dealer - might have been a much better deal!

I used to own both of these rigs. As I recall, the HTX-10 was channelized - you tuned it in 5 kHz steps and then used a 'clarifier' to move between the channels. I think the HTX-100 was more like a typical ham rig. But, I worked a lot of DX mobile with these rigs from Iowa. 25 watts and a whip or a dipole will do that.

Hopefully, this will get at least 2 more people on HF - which is one of the club's goals for 2012. If you aren't on HF, you are seriously missing out. Even as 'flaky' as 10 is lately, it's better than silence.

I've had fun with the radio on this trip, but I've managed to miss the Thursday night nets so far. I tried to check in last week, only to figure out that I was off on the times. This week, I should be in Colorado on Thursday night. As I was driving through New Mexico, I had a long chat with KM5HH, who checks into our 80 meter digital net all the time.

1091. Freebies!

Yahoo group: rochester_hams

From: Bill
Topic: 1091 Message: 1091

OK, I have returned from my trek braving barren deserts and snow storms on high mountain passes. After a very late morning, I unboxed the two Radio Shack radios I had won on EBay, and tried them out. I determined that they do, in fact, transmit and receive on 10 meters.

The HTX-10 is beautiful - somebody took good care of it. The HTX-100 is fine, but there is a small problem with the LCD display. Both seem to produce full power on SSB, and they both sound fairly good.

So, the plan is to bring the two rigs to the RARC meeting tomorrow night and give them to two deserving hams who currently lack any kind of HF capability. Once again, the rules are:

1. Recipients must be current members of RARC.

2. Recipients must not currently have an HF rig.

3. Recipient must agree to put the radio on the air as soon as possible. I expect to hear the radio on the next Tuesday night net, or, see some other proof of on the air activity. The radio doesn't do any more good sitting in your closet than it would in mine.

4. When the recipient acquires a newer/better HF rig, I expect them to return the RS radio to the club, and pass it on to another member who needs an HF rig!

I need to find some raffle tickets, as I anticipate that more than two people will be interested.

Of course, part of tomorrow's meeting will be the opportunity to build a 10 meter antenna. I would expect the winners to stick around for it if they don't already have an antenna for 10.

10 meters has been flaky this week, but there are still frequent openings. It should improve and become reliable for the next few years, mostly in the fall, winter, and spring. Sporadic E openings in the summer can also provide some excitement.

1094. Radio Class

Yahoo group: rochester_hams
Date: 2012-02-14 19:05:51 UTC
From: Bill
Topic: 1094 Message: 1094

I checked my signup page for interest in radio classes, and I got 6 new people while I was gone! So, I will be planning a class very soon, I hope. If it's a small enough group, I'll just plan to hold the classes here at my place.

If you have friends that might be interested, this would be a good tim to get them on board.

Thanks!

1095. Thanks for the warm reception!

I'm glad you had a warm welcome. My first time at a RARC meeting only one person shyly greeted me and people wouldn't even look at me. I suppose that could be the reason I haven't been back to one since. Enjoy the hobby, ham radio is a life long endeavor.

Hello There:

I thought I would take time to drop off a quick announcement about a new round of training that would be beneficial to all hams, especially those who plan to embed themselves with agencies like Salvation Army, American Red Cross and the like. There are 2 classes involved here – Level-1 is for the those have never had any training on responding to an emergency event, what to bring, how to present yourself etc. Level-2 is focusing the varying kinds of NET and How to be the best Net Control you can be. I am attaching the flyer for your review and if you have any questions, please seek me out….

Doors open at 08:30 AM - Done by 4 PM
AERO Level-1 begins at 9 am
AERO Level-2 begins at 10 am
Reminders: Bring your H-T's for the drills and practice sessions....

This is a City Government building, a STATE ID must be on your person at all times……

If YOU are attending, please RSVP directly to Dan Peitso @ N0PIY@... – his email is attached above….

Thank you and I hope to see you all there….on Saturday, March 3’ 2012 at the Bloomington, MN – Police Dept. E-O-C.

The Police Station address for the EOC is: 1800 West Old Shakopee Road, Bloomington MN 55431-3027.

Thank you,

Don Burgess – KC0QNA

1106. Looking for db9 null modem cable, null modem adapter, or pair of db9 to rj45 adapters

Yahoo group: rochester_hams
Date: 2012-03-05 15:15:26 UTC
From: Jamie Ivanov (KC9LFD)
Topic: 1106 Message: 1106

I'm looking for some parts that are a little difficult to locate apparently. I can't seem to find any of my serial cables, so I'm in dire need of a DB9 null modem cable, or at least a null modem adapter or DB9 to RJ45 adapters (a pair of those). If anyone can help me out that would be appreciated. Feel free to text me or email me. I can return phone calls on my lunch break or after work.

Well, everyone asked why we were changing the ARES simplex frequencies the last time we did it, and now we are doing it again. Our leaders assure us that this is the LAST time. Well, to make a very long story short, the change was made to make it more compliant with what the state government had in mind.

Anyway, please take the time get the new frequencies in your radios. You will find the listing here:
http://www.minnesotaares.org/files/SOG%206-C-001%20Simplex%20Frequencies%20xls.pdf

You may also find some other useful frequencies on that list - such as for HF and our HF nets.

On another front, I want to remind everyone of the Thursday night digi nets. First at 8 p.m., we meet on 80 meter - 3583.5 (USB dial frequency)using the Olivia 16/500 mode. Then at 9 p.m., we meet at 147.255 (PL 100) using MT-63/2000. Bob, AB0BW, links the .255 machine to IRLP node 9627 during the net each week. KC0QNA, Don, has started a similar net on the Faribault 146.79 repeater at the same time. We'd like to link the two machines during the net, to give us coverage of most of SE MN. We get checkins from LaCrescent to Albert Lea and LeSeuer County on the .255 machine.

I have just found out that the 331 bar and grill has closed. Since we where to eat there we need to find a new place to go to. Several places would be Whistle Binkies south, or Fat Willy's by Toyota.
We could reserve the back room at Binkies so we could stay together during diner and it is quiet. Let me know and I will set it up for the group. We would need 10 to do this. Fat Willy's would have to split us up in groups. They have no group seating.

I haven't tried the back room at Binkies - might be a good place. They have something on the floor at Binkies that I don't like to walk on, but I can wear ice skates that evening. I don't know if it's butter from the popcorn or just what it is... what time?

1115. Zumbro 100 Ultra Marathon

Yahoo group: rochester_hams
Date: 2012-03-10 00:47:21 UTC
From: Eric Van Norman
Topic: 1114 Message: 1115

Hello.

I received a request from a fellow ham, Brendan, who helps the the John Beargrease sled dog race and he also helps facilitate communications for the Afton Trail Run each July. The race director for the Afton Trail run has asked if he would be able to assemble a team of radio operators for the Zumbro 100 Ultra Marathon . The 100 mile run starts Friday April 13, 2012 at 8:00am, and goes through Saturday, and the 50 mile midnight run starts at 12:01am Saturday and runs through late Saturday afternoon. It is run in the Zumbro River Bottoms Management Area near the village of Theilman , MN , which is 9 miles South of Lake City, and 13 miles West of Wabasha.

Not that far of a jaunt from here.
This race has a 4 year history and has a smaller field than Afton , but it's growing every year. With 100+ runners anticipated this year, and a field limit of 200, communications is becoming of much greater concern for them due to little to no cellular coverage in the area. The entire run is 34 hours long, but John has said that even if we don't have enough volunteers to staff each aid station for the entire event, even having radio operators camped out near the aid stations, that are accessible in the event of an emergency, would be great to have. As of now there are 4 aid stations, 3 of which are easily accessible by car, truck, camper, etc. 1 of them can be driven into with a 4wd pickup if the ground is dry enough, but if it's wet it can be walked into or accessed by ATV, it's about a mile in. The run website for more info on the event is www.zumbro100.com.

I did mention the Wabasha repeater to Brendan but don't know it's coverage down into the bottoms.

I had hoped to mention this on the net this weekend and at the club meeting, but I probably won't make either. If someone wants to mention it, please do.

If you can help or you want more info, you can contact Brendan at Brendan@....

Thanks,

Eric

1116. Re: [rochester_hams] Zumbro 100 Ultra Marathon

Yahoo group: rochester_hams
Date: 2012-03-10 05:37:38 UTC
From: jonmcpete@cpinternet.com
Topic: 1114 Message: 1116

I am interested and will contact Brendan.
FYI For solid copy (near full quieting or better) the
Wabasha repeater will cover the Zumbro River Bottoms from
Kellogg upriver to Theilman with 5 W. and a handheld though
a quarter-wave whip will do a lot better than a shortened
antenna. The bottoms upriver from there constitute more of
a problem until you may need 30. W. by the time you get to
Millville with coverage better on the South side of the
river valley than on the north side due to shadowing by the
bluffs. Up to Hammond things change little but if the track
follows the river upstream from there to Zumbro Falls one
needs 45.W. and a 5/8 wave. A J-pole works well there.
Again, this is for "arm-chair copy", you can get through
with much less if you position yourself carefully but an
event of this duration could get pretty tiring to handle
with noisy copy and the need for repeats.
As always, the repeater is open for all amateur use at any
time by any individual or group without any permission but
it is sometimes good to check with me in case a similar
event was planning on using it at the same time in a distant
part of it's coverage area in a different direction. Not
that we couldn't share I hope.
Jon Peterson, WA0UNB; repeater owner, trustee, chief cook
and bottle washer.

1128. Radio Class and Digital Nets

Yahoo group: rochester_hams
Date: 2012-03-13 19:07:49 UTC
From: Bill
Topic: 1128 Message: 1128

I'm planning to do a Technician class on April 14th and 21st.. The online signup on our web site is really working - I think I have 11 people signed up now. I'm planning to do this class at my house, and that's about as many as I can handle, but if you know other people who would like to take the class, let me know. I may end up moving the class, anyway.

Second - just my normal reminder about the digital nets on Thursday night. The 80 meter net is being designated as a statewide net, and we actually get checkins from all over the country. I'm working on making both of these nets capable of handling NTS traffic, and we have a liason for both to the NTS.

1129. Skywarn signs.

Date: 2012-03-19 00:32:11 UTC
From: Steve Wiebke
Topic: 1129 Message: 1129

Looking over the web sites for skywarn signs, the www.anythingweatherstore.com has a great veriety of skywarn items. Do an item search for skywarn at the store site. Since the price ranges, size and type of skywarn signs vary. You can see what you want and how many you want. Let me know via e-mail what items and quantity. I will send in one order for the group. This will save on shipping. If you want to order on your own you can do that as well. Contact me with any questions. I will place the order at the end of March so I can hand out the items at the next RARC meeing. 73

This is a cash or check payment when you pick up your items please.

1141. Digi Net Tonight - FCC Request for Comments

Yahoo group: rochester_hams
Date: 2012-04-05 18:50:31 UTC
From: Bill
Topic: 1141 Message: 1141

Just a reminder that the digital ARES net is tonight, both the HF net at 8 and the VHF net at 9. On HF, we meet at 3583.5 (USB frequency) using the Olivia 16/500 protocol. The VHF net meets on the 147.255 repeater using the MT-63/2000 protocol.

This notice from ARRL discussed a Request for Comment from FCC, seeking to better understand our role in disaster communications, and, to determine what, if any changes, FCC should consider to 'enhance' our abilities.

I spent most of yesterday writing my comments. I mentioned changes I'd like to see to the Technician Class license privileges to include some HF privileges that would be more useful for EMCOMM. I also mentioned CC+R's and restrictive covenants, and some other things that I think are impediments for us, such as the blanket 'no encryption' rule. The RFC also requests comments on ways to promote intercommunication between hams and public service agencies in a disaster.

Please take the time to read the docket and consider your comments.

ARLB007 FCC Seeks Public Comments on Emergency Communications by Amateur Radio and Impediments to Amateur Radio Communications

In response to the Congressional directive to prepare a study to assess Amateur Radio's role in emergency and disaster communications and the impact of private land use regulations on the amateur community's ability to provide such communications, the FCC issued DA 12-523 soliciting comments from the public. The period for public comment runs until May 17, 2012.

"As part of the study contained in Public Law No. 112-96, the Commission has opened a 45 day period for comments to be filed on the issue," said ARRL Regulatory Information Manager Dan Henderson, N1ND. "Because of the short deadline for the study to be completed and presented to Congress -- before the end of August -- the ARRL and the amateur community must quickly mobilize their response."

The FCC Public Notice focuses on two specific areas for comments.
The first is the role that Amateur Radio has played and continues to play to support emergency and disaster relief organizations, such as FEMA and local/state emergency management agencies. The second is to determine impediments to enhanced Amateur Radio communications. This would include the impact that private land-use regulations -- such as deed restrictions and homeowner association covenants -- have on the ability of licensed amateurs

to fully participate in providing support communications to the served agencies.

"This study is not about zoning ordinances or regulations adopted by the local or state governments," Henderson explained. "Amateurs already have the limited protection of PRB-1 to assist them with those situations. The areas of concern here are the limitations that are placed on a property when it is purchased, either as part of the deed of sale or by restrictions imposed by the neighborhood/homeowner's association. Those restrictions -- sometimes referred to as CC&Rs -- are not currently covered by the FCC's PRB-1 decision from 1985."

To allow the ARRL to quickly collect and collate relevant information from the amateur community to help support the filing it will make with the FCC on this issue, a website has been setup. The site -- www.arrl.org/ccr-study-information -- provides details about what kind of information is needed by the ARRL.

Also on the site, you will find links to two online data collection forms. The first form allows you to provide information about specific emergency communications in which Amateur Radio has played a role since January 2000. The second form asks for specific information on the CC&Rs/deed restrictions that control your property. It also asks you to provide information on how those restrictions have impacted your ability to fully support emergency communications.

"Whether you are an ARRL member or not, your information and situation are important to helping us make the case for all amateurs," Henderson said. "Whether your support communications are with ARES, RACES, SKYWARN, CERT or other emergency and disaster groups, your voice should be heard. If you cannot operate effectively from home during an emergency because CC&Rs prohibit adequate antennas on your property, that is important to document and quantify. This issue affects all of Amateur Radio, not just ARRL members."

Henderson said that due to the short timeframe that the FCC has allotted for public comment, time is of the essence. In order to allow the ARRL to develop its comments, the ARRL asks that all information sent by the amateur community be received at the ARRL no later than April 25, 2012: "We realize this is a very short turnaround asking for your response, but this is based on the time provided by the Commission for the comment window."

It is important that when you provide specifics of your CC&R, you also provide the ARRL with a copy of its actual wording. If you have the CC&R in a digital format (or you can scan the document into a file), it can either be uploaded through the website above or it can be sent via an e-mail to CCRinfo@... . If you do not have an electronic format, a hard copy may be sent via US mail to: CCR Study Information, ARRL, 225 Main St, Newington, CT 06111.

"We need factual, specific details," Henderson said. "The more accurate information we have -- including copies of the CC&R language -- the stronger

case we can make. Having copies of the exact CC&Rs is important. It allows us to demonstrate the wide variation of restrictions. Including the specific text is as important as any other piece of information you provide."

If you have questions about what is being requested, you may contact the ARRL Regulatory Information Office via e-mail at reginfo@.... "Again, time is of the essence in this matter,"
Henderson said. "This is the best opportunity that amateurs have had to address the impact of overly burdensome private land use restrictions. If Amateur Radio is to succeed in this effort, it is going to take all of us working together."

+ On the Air: FCC Seeks Public Comments on Emergency Communications by Amateur Radio and Impediments to Amateur Radio Communications

In response to the Congressional directive to prepare a study to assess Amateur Radio's role in emergency and disaster communications and the impact of private land use regulations on the Amateur community's ability to provide such communications, the FCC issued DA 12-523 soliciting comments from the public. The period for public comment runs until May 17, 2012.
"As part of the study contained in Public Law No. 112-96, the Commission has opened a 45 day period for comments to be filed on the issue," said ARRL Regulatory Information Manager Dan Henderson, N1ND. "Because of the short deadline for the study to be completed and presented to Congress -- before the end of August -- the ARRL and the amateur community must quickly mobilize their response." Read more here.
On the Air: ARRL Seeks Comments on Proposed 33 cm Band Plan

A few months ago, the ARRL UHF/Microwave Band Plan Committee asked the Amateur Radio community about current, planned and projected uses of the amateur bands between 902 MHz-3.5 GHz. The response was beyond our expectations, with hundreds of comments and suggestions received. After reading the feedback, the Committee began working on the band plans, and the draft plan for 33 cm (902-928 MHz) is now ready for review. Read more here.
+ ARRL Field Day: Be Ready for Field Day in Official Field Day Gear from the ARRL

You've spent all year preparing for ARRL Field Day, but there are still a few things you're missing: The official 2012 Field Day shirt, hat, pin and logbook! ARRL Field Day -- Amateur Radio's largest on-the-air operating event -- is just a little more than two months away, so be sure to get your gear before supplies run out. This year's ARRL Field Day shirt is a khaki T-shirt that sports the 2012 Field Day logo atop a pocket, with the ARRL diamond logo and "Ham Radio" on the back. Shirts are available in sizes Small-4XL. The hat -- which has "Field Day" emblazoned on its front -- is Texas Orange and is color-coordinated with this year's logo. New for 2012 is the ARRL Field Day Logbook. This nifty logbook is set up in the Field Day reporting format and includes dupe sheets and other forms that you need to have to ensure a successful Field Day. Clubs, order early! Collect orders from members and

place a single order -- pay only $12.50 shipping for orders
over $50 (while supplies last). ARRL Field Day is June 23-24, 2012. Fulfill all your Field Day apparel needs at the Field Day Supplies section of the ARRL website.
+ ARRL Field Day: ARRL PR Committee to Host Field Day Webinar

The ARRL Public Relations Committee will be holding a free webinar entitled Field Day Press Release on Thursday, April 12 at 9 PM (EDT). This webinar is geared for those who want to learn the easiest -- and most effective -- ways to write up a media release for Field Day and actually get it noticed by the media in your home region. Learn the "tricks of the trade" from the people who actually work in radio, television and print media. ARRL Public Relations Committee Chairman Steven Polunsky, W5SMP, will host the event; Polunsky is also the Public Information Coordinator for the ARRL's South Texas Section. Joining Polunsky are Bill Husted, KQ4YA (print), Mark Kraham, W8CMK (TV) and Don Carlson, KQ6FM (radio). Space is limited -- reserve your spot today.

+ Google Declares "Morse Code Is Perfect" with New Gmail Tap Mail Program

On April 1 (yes, April Fools' Day), Google announced that it has unveiled a new way to use its popular Gmail e-mail system. Called Gmail Tap, it uses dots and dashes to form letters, a system of communicating that should be very familiar to radio amateurs. "Morse code is perfect," said Gmail Tap Engineer Mitch Fedenko. "It's just a dot and a dash. What's simpler than that?" Read more here.
+ Stephen Klinefelter Takes Over As New Army MARS Chief

On April 2, US Army Colonel (retired) Stephen G. Klinefelter -- a senior staff officer who oversees Army MARS operations for the US Army Network Enterprise Technology Command -- announced that he was assuming the post of Chief of Army MARS, effective immediately. Klinefelter, 61, took the leading role last December in untangling a Pentagon decision to "phase out" the Army MARS Winlink 2000 messaging system, used by numerous state and municipal emergency management organizations; an investigation showed it lacked required certification for safety from hostile incursions. He successfully argued that the resources of Amateur Radio -- not just MARS or Winlink -- far outweighed any risk from enemy hackers. Lieutenant General Susan Lawrence, the Army's Chief Information Officer, ordered an exemption from this policy for Army MARS, which officials said would extend to the Air Force and Navy-Marine Corps MARS programs, too. Read more here.
+ Silent Key: Fred Maia, W5YI (SK)

Fred Maia, W5YI (SK)
The holder of one of the best-known US Amateur Radio call signs, Frederick "Fred" Maia, W5YI, of Arlington, Texas, died of cancer on March 28. He was 76. Maia was a leading Amateur Radio journalist for nearly 35 years and a pioneer of the Volunteer Examiner program adopted by the FCC in 1984, and was the first Volunteer Examiner Coordinator (VEC) appointed by the FCC. Maia subsequently founded The W5YI Group in 1986 to develop, publish and sell amateur and commercial radio license study materials. In the realm of FCC commercial radio licensing, Fred formed National Radio Examiners to provide examination services. Read more here.
+ On the Air: W1AW Claims 5BDXCC
Nearly four decades after the introduction of the Five Band DXCC Award (5BDXCC), W1AW, the Hiram Percy Maxim Memorial Station has achieved this milestone. "As with most stations, we found that 80 meters was our stumbling block," W1AW Station Manager Joe Carcia, NJ1Q, explained. "One by one, we picked off the needed entities, and W1AW now holds 5BDXCC #7307. W1AW's 5BDXCC plaque will hang in a place of honor at the station."

W1AW Station Manager Joe Carcia, NJ1Q (left) and ARRL Chief Executive Officer David Sumner, K1ZZ, with W1AW's Five Band DXCC Award. Sumner is the W1AW trustee. [Cory Sickles, WA3UVV, Photo]
Prior to achieving 5BDXCC, W1AW held DXCC on 40-10 meters for many years, but was always searching for the last few remaining entities on 80 meters. Carcia said that at least 90 percent of the confirmations were made via Logbook of The World, (LoTW), but the last contacts #99 and #100 on 80 meters were confirmed via traditional QSL cards.
W1AW currently holds Five Band Worked All Continents Award (5BWAC), Five Band Worked All States Award (5BWAS), Worked All Continents Award (WAC) on CW, RTTY and Phone, Mixed DXCC (with 250 entities confirmed) and DXCC for Digital, CW and Phone.
"Now that W1AW has 5BDXCC, we are gunning for DXCC Honor Roll," Carcia said. "Like with 5BDXCC, there are just a few more entities to go before W1AW can claim this award."

On the Air: ARRL Rookie Roundup's Third Year Includes New Categories

With the Rookie Roundup beginning its third year of competition, 2012 brings some new changes in the event -- including new entry categories. The first Rookie Roundup of 2012 will use SSB (phone) and will be held on Sunday, April 15 from 1800-2359 UTC. All amateurs are welcome to participate, especially those in DX locations.
The focus of the RR remains those who are newly licensed -- hams who received their very first license during the current year or the two previous calendar years (2012, 2011 or 2010). Those licensed before 2010 are encouraged to get on and work the Rookies. Or consider acting as an Elmer and coaching Rookies in their contest efforts without actually making QSOs -- or performing logging or any other station functions. Read more here.
Two New Books and Digital Software Library -- Now Shipping!
The ARRL has just released two new books and a digital software library that you are going to want to have in your shack: Hints & Kinks for the Radio Amateur (18th edition) and Short Antennas for 160 Meter Radio by Grant Bingeman, KM5KG. The newest version of Software Library for Hams is also available as an immediate download or on CD-ROM. Read more here.
ARRL In Action: What Have We Been Up to Lately?

This feature is a concise monthly update of some of the things that the ARRL is doing on behalf of its members. This installment -- which covers the month of March -- takes a look at upcoming ARRL member benefits, new privileges for radio amateurs on 60 meters, forthcoming ARRL publications, happenings at W1AW, reports from the Official Observer Desk and more. Read more here.
ARRL HQ: Two Positions Open at ARRL HQ
The League is currently looking to fill two open positions at ARRL Headquarters in Newington. One position is in the Membership and Volunteer Programs Department and the other is in the Education Services Department. To apply, please send your cover letter and resume via e-mail, or complete the application, print it out and mail it with your resume and cover letter to Monique Levesque, ARRL, 225 Main St, Newington, CT 06111. You can also fax your application, cover letter and resume to 860-594-0298. Please include your salary history and salary requirements. The ARRL is an equal opportunity employer. Read more here.

Solar Update

The Sun, as seen on Thursday, April 5, 2012 from NASA's SOHO Extreme Ultraviolet Imaging Telescope. This MDI (Michelson Doppler Imager) image was taken in the continuum near the Ni I 6768 Angstrom line. The most prominent features are the sunspots. This is very much how the Sun looks in the visible range of the spectrum.
Tad "I remember April when the Sun was in the sky" Cook, K7RA, reports: Over the past week,

the average daily sunspot number and solar flux values rose slightly, even though as the week progressed, each day had a lower number than the day before. The daily sunspot number began the week at a high of 100, but ended at 60. Likewise, the daily solar flux started at 111.5, ending with 102.1. The mild geomagnetic conditions made for a quiet week, with the only unsettled conditions on April 1-2 in very high latitude regions, with Alaska's College A index at 11 and 17. From the April 4 USAF forecast, they see solar flux for April 5 at 105, April 6-7 at 110, 115 on April 8-10, followed by 110 on April 11, and then 100 on April 12-22. The next predicted short-term peak for solar flux is 130 on May 2-5. Look for more information on the ARRL website on Thursday, April 5. For more information concerning radio propagation, visit the ARRL Technical Information Service
Propagation page. This week's "Tad Cookism" is brought to you by David Cassidy's Daydreamer.
+ ARRL to Close in Observance of Good Friday
ARRL Headquarters will be closed in observance of Good Friday on Friday, April 6. There will be no W1AW bulletin or code practice transmissions that day. ARRL Headquarters will reopen Monday, April 9 at 8 AM Eastern Daylight Time. We wish everyone a safe and enjoyable holiday weekend.
+ ARRL Recognizes: Eric P. Nichols, KL7AJ, Wins March QST Cover Plaque Award

The winner of the QST Cover Plaque Award for March is Eric P. Nichols, KL7AJ, for his article "Three Wrong Assumptions about the Ionosphere." Congratulations Eric! The QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll web page. Cast a ballot for your favorite article in the April issue today.
New QuickStats Poll Now Available on ARRL Website
Four new poll questions have just been published on the QuickStats page on the ARRL website. Let your voice be heard!

Questions in this month's QuickStats poll:

How many times have you attended the Dayton Hamvention®?
Have you used your new 60 meter CW or digital privileges?
Do you use software to control your transceiver?
When was the last time you inspected your antenna feed lines?
Visit the QuickStats page and be sure to bookmark it in your browser. Results from this QuickStats poll will be published in the July 2012 issue of QST on the QuickStats page, located in the rear advertising section of the magazine. Along with monthly poll results, QST QuickStats offers colorful charts and graphs that highlight interesting Amateur Radio statistics.

By all means, everyone should read the questions from FCC and respond.

Please note that the questions are not limited to matters involving restrictive covenants and HOA's. They ask in several different ways, what FCC rule changes would 'enhance' amateur radio disaster response.

In my response, I listed several things:

1. A lack of HF operators. I went on to suggest that it would be appropriate to grant Technicians some more useful HF privileges, at least on those bands that would be expected to be involved in EMCOMM.
At a minimum, giving Techs digital privileges on 40 and 80 meters would go far in improving the situation. Phone privileges on 160 is another idea - that would make the modern Tech license just about equal to the pre-WWII entry level Class B license.

2. Problems with RFI to and from consumer grade electronics. I urged the Commission to work harder to stop the importation and sale of equipment that is prone to this problem.

3. I recommended that FCC make a blanket pre-emption for the minimum antenna required to have an effective HF station for EMCOMM purposes, and suggested that the requirement would vary according to the type of dwelling. A single family detached home should be able to have at least a dipole or other low impact antenna at least 35 feet high. Requirements for townhouses and condos would be different.

4. I asked them to restore the portion of the 80 meter band from 3600-3625 to CW and digital modes. If you haven't been on 80 lately, you don't know how crowded the digital portion of the band gets. We're also getting DX phone stations down there, now, since the U.S. hams can only go down to 3600 on SSB.

You can read all my comments online at the FCC site if you want to take the time.

1145. Tonight's meeting (April)

From: K0VH
Topic: 1146 Message: 1146

ICOM 2720H 2 meter plus 440mhz transceiver for sale.
I have owned it for 5 years & only parting with it because I am "between vehicles", ie may stay handheld mobile in latest car. You can read the specs etc on
http://www.universal-radio.com/catalog/fm_txvrs/0272.html
It supports cross band repeat (use a low power 440 handheld
to "rebroadcast" out on 2m simplex or to another repeater),
has 3 power levels, has a remote faceplate (+ full function HM133 mic), and does dual receive to 2 separate speakers. It's preprogrammed for most local repeaters in eastern MN & WI plus has a wideband receiver for other scanner freqs. I am asking $275 for the package. Feel free to contact me direct email from http://www.rarchams.org/members.htm

From: Grant Kesselring
Topic: 1147 Message: 1147

Hi all,

The trucking company just called and said our Field Day masts will be arriving at my house at 2pm today. If any of you are reading this and can come over to my place to help unload, that would be great!

My address:
6014 Woodridge Ct NE

My cellphone: 507-254-8198

73,
Grant K1KD

From: K0VH
Topic: 1146 Message: 1150

As of 4pm today this is tentatively SOLD to Richard Willis
a friend of Grant KC0JOO who wants to get back into 2m, storm spotting, etc. He will pick it up around Ap 26 so if something changes by then I will "re-post" the sale but for now consider it
sold. 73 K0VH

1151. Vintage Parts and Books Available

Yahoo group: rochester_hams
Date: 2012-04-12 21:57:32 UTC
From: Niel - W0VLZ
Topic: 1145 Message: 1151

A few weeks ago I helped my stepfather, Vance, K5CF, move into a nursing home. Vance has been on the air since 1937. I have his logbooks and QSL card collection to prove it. One of his QSL cards is even for a CW contact he had via one of the satellites a few years ago. The ham he worked was using his 2 mtr FM handheld as the uplink transmitter, sending CW by pressing the transmit button...but I digress.

I brought back a bunch of tube era parts and books including lots of ARRL Handbooks from the 40s through the 70s. Anybody (local) interested? I'm certain there is a vintage homebrew project waiting in the pile in my garage.

73,
Niel - W0VLZ

1163. Field Day Tower Masts -- we've got em !!!

Yahoo group: rochester_hams
Date: 2012-04-13 05:30:44 UTC
From: kesselg
Topic: 1163 Message: 1163

I just wanted to let you all know that the two tower masts did arrive yesterday and they are safely stored in my garage. Thanks to Dave K0VH, Dan KD0ORS, and Peter KN0CK who helped me unload the semi truck. That delivery driver had to do some pretty fancy backup moves to get his semi out of my cul-de-sac! The next step will be for me to do a full inventory of the parts for each kit. Then, some time in the near future I'll plan to get us together for a tower raising party so we can practice putting them up, taking them down, and learn what it will take to attach rotors/masts/antennas.

73,
Grant K1KD

1164. Looking for 10v 100 microfarad caps

Yahoo group: rochester_hams
Date: 2012-04-14 00:42:37 UTC
From: Jamie Ivanov (KC9LFD)
Topic: 1164 Message: 1164

I'm actually running low on spare parts apparently. I'm in need of 10v 100 microfarad caps for a project.

Of course, if you have a variety of other caps or power supplies/equipment that I can salvage parts off of, please let me know. I'm looking for something sooner rather than later. Thanks!

1167. Hamfest

Yahoo group: rochester_hams
Date: 2012-04-14 18:47:45 UTC
From: Steve Wiebke
Topic: 1167 Message: 1167

The Arrowhead Radio club of Superior and Duluth have an ARRL hamfest on May 5th. Tickets are $7.00 at the door. The start time is 9:00 AM, we would leave around 5:00 AM that day with a breakfest stop on the way. It is being advertised as the largest hamfest north of the twin cities. If you are interested in going I will collect names and set up car pool(s) to drive up for the day. It is a 3 1/2 hour drive one way. If we get enough people the gas price will be reasonable for the drive. Listen on the Sunday night nets for more information. RSVP via return e-mail if you are going 73

From: Niel - W0VLZ
Topic: 1168 Message: 1170

Assuming reasonable weather Peter, W0LLN, and I will be out at Essex Park Sunday, Apr 22, starting about noon playing with our radios. So far we're talking about an Elecraft line up of a K1, a K2 and my new KX3 (see http://w0vlz.blogspot.com/search/label/KX3 for more information on this one).

Anyone else have a favorite radio to bring out? Would you like to see a few examples of HF QRP rigs? Essex Park has some great trees for hanging antennas from (and playground equipment for the kids).

"Submitted by Skip Jackson, KS0J, MN SM

++ ARRL AFFILIATED CLUBS IN MINNESOTA

Prepare For the Next Generation of Hams (I Double-Dog Dare You!)

I just returned from a club meeting this evening. It was very well attended and by mostly people that looked a lot like me: gray-haired and a bit wrinkly. Not that this club is unusual. Many of the club meetings I attend around the state are completely lacking members under forty or even thirty years of age. Where are the new hams going to come from? Think back to how many of us first got our interest in radio. For me it was from building a "foxhole radio" from plans in an old Boy Scout handbook from a Chicago Public Library.

Here's my challenge. It's not so difficult. It can be a great club project. And, it can be a lot of fun.

I want each club to pick a volunteer to contact your local Boy Scout Council and get the names of the local Boy Scout troops in your area. Contact each of them one by one and offer to help their scouts earn their radio merit badges. Keep doing this until you have at least one troop that accepts your offer. This shouldn't be too difficult.

How do you organize a radio merit badge class? That part is even easier. Simply enter "Boy Scout Radio Merit Badge" in your favorite search engine and you will no shortage of lesson plans, teaching aids, and assorted tips on how to run a radio merit badge class. Is it the goal for all scouts to earn their ham radio license? No. That may come later IF you can at least get some of them interested in radio and electronics at an elementary level.

Soon, I will announce a formal competition for clubs that do conduct at least one radio merit badge class. Your club can be eligible to win big prizes that can be worth THOUSANDS OF DOLLARS this year! (No kidding!) So, start talking it over with your club members, make a few phone calls, look at some of the online resources for conducting a fun radio merit badge class, and start to prepare for the next generation of hams! -73

Submitted by Frank Karnauskas, N1UW, Affiliated Club Coordinator "

I know we have had some folks in the area working with the scouts on their merit badges in the past, but perhaps we could parlay our use of the scout camp into something here? Perhaps offer a merit badge class during Field Day? That would also count as an

'educational activity' for Field Day bonuses. I have no idea what the fabulous prizes they're talking about might be.

As a follow-up to my previous posting, this weekend I got a chance to unpackage all the parts for the new tower masts. I took an inventory of everything that was delivered and found all the expected items. After inspecting the part of the tower where the antenna mast goes, I have a better idea of how we should attach our beams. However, I'll be getting with some of you to discuss this further.

Topic: 1182 Message: 1182

I've got my 5 watt SSB rig on 6 but I not familiar with the band or propagation.

What are the 6 mtr CW and SSB calling frequencies?

Any tricks to knowing that 6 mtr propagation might be good without turning on the rig? Weather to watch for? Web sites to go to?

Thanks,
Niel - W0VLZ

1183. Field Day tower practice session - June 2, 2012

Yahoo group: rochester_hams
Date: 2012-05-15 05:43:24 UTC
From: kesselg
Topic: 1183 Message: 1183

Hi All,
As you all know by now, the club purchased two AB-577 military surplus mast kits this year to be used at Field Day. Since Field Day is fast approaching and we have not used these masts before, I'd like to get us together to learn: how to put them up, take them down, and attach our antennas.

I personally have SOME experience with these masts because the ham club I used to belong to in Vermont used a few of them for their Field Day event. However, it has been a few years since I've practiced and could use a refresher.

So let's plan on getting together for a tower party at my QTH on June 2 at 9AM. In case it is a washout that day, the rain date will be June 3 at 1PM.

My Address is 6014 Woodridge Ct NE, Rochester. Email me if you have any questions, or call 206-3542.

73,
Grant K1KD

I may be in Madison that weekend but noted it on the calendar just in case
plans change.
I am helping my wife with the big garden club plant sale today and tomorrow
so don't plan on doing IBM RC.

1186. Re: 6 Mtr Help?

Yahoo group: rochester_hams
Date: 2012-05-15 14:24:12 UTC
From: Niel - W0VLZ
Topic: 1182 Message: 1186

I've found a couple of web resources that clarified 6 mtrs a little for me. Others may find them useful as we prepare for the ARRL VHF Contest.

At http://k0swi.microlnk.com/NETS/6_METER_NET/six_meters_BAND_TALK.htm is a good writeup on 6 mtrs including where to operate, type of equipment and propagation.

At http://www.vhfdx.info/spots/map.php?Lan=E&Frec=50&ML=M&Map=NA&DXC=N&HF=N&GL=N is a real time map showing 6 mtr QSOs

Niel,

Here is another useful site: http://www.smirk.org/opaids.html . The main calling frequency is 50.125 (SSB), with CW 50.080 - 50.100.

I saved a file a while ago that has some basic info, attached below. Also, I pulled out some beacons that are not too far away. I've never heard any of them, though. A good antenna really helps.

I've made a few 6m contacts, but at the moment my transverter isn't willing to transmit. If you can't hear anything, though, it means either nobody's active or the band is closed. It seems to be closed pretty often. The only times I've heard a lot of activity has been contests.

Peter

Subject: [rochester_hams] Field Day tower practice session - June 2, 2012

Hi All,
As you all know by now, the club purchased two AB-577 military surplus mast kits this year to be used at Field Day. Since Field Day is fast approaching and we have not used these masts before, I'd like to get us together to learn: how to put them up, take them down, and attach our antennas.

I personally have SOME experience with these masts because the ham club I used to belong to in Vermont used a few of them for their Field Day event. However, it has been a few years since I've practiced and could use a refresher.

So let's plan on getting together for a tower party at my QTH on June 2 at 9AM. In case it is a washout that day, the rain date will be June 3 at 1PM.

My Address is 6014 Woodridge Ct NE, Rochester. Email me if you have any questions, or call 206-3542.

73,
Grant K1KD

Good idea. Can we be in on the competition?
Ann, KD0GNG, and I were going to leave today so it could be
a little more restful but will leave tomorrow also.
Don't know what you fellows are driving but we are bringing
the ambulance soooooo..... don't be afraid to buy
something "too big" because you "can't get it back."
To contact us at Dayton, cell is 651-564-1545.

I predict that Steve has his eye on a crankup tower - there is usually one there that goes up 120 ft. Will that fit?

Just kidding. Enjoy Dayton.

Kind regards,

Scott Wright

Scott,
Ya, I've seen that beauty, fantastic!

My current trailer couldn't handle that one. Using ham radio operator's "aether-tele-megadx-deductive-logic" I should therefore buy a bigger trailer. Heaviest load I've hauled with current one of "too-good-to-pass-up" ham paraphernalia was the 2,600 feet (in 250-540 foot pieces) of new LDF-7 coax. That tower is several times heavier.

Maybe I could convince the XYL that a bigger trailer is a good idea if I said it would be cheaper if I built it myself? I once saw, on "The Red Green Show".....

1193. 147,255 repeater

Yahoo group: rochester_hams
Date: 2012-05-30 18:10:22 UTC
From: Steve Wiebke
Topic: 1193 Message: 1193

The EOC repeater has been fixed and updated. White Water found an amp problem and a coax cable that was attenuating the signal. Should have better operation with the fixes.

Wow! Just over 8,000 miles... next time I say that I hate airports, remind me of this, OK? For those just tuning in to this saga, we were scheduled to go on a cruise to the Bahamas last week, and I had the truck all packed to go when I got news of a death in the family in California. I didn't have time to fly to California and back, than drive to Florida and didn't want to spend a fortune on last minute airline tickets, so I decided to drive.

Gas prices were very strange. The cheapest I saw on the trip was $3.17 in downtown Atlanta a couple days ago. I was paying very close to $5 a gallon all over California. The further west you went, the higher the prices. Gas was cheap in Florida, Georgia, and most of the midwest.

Lots of radioing during the trip. My HF antenna was found to be dead as I was leaving town, so I had to use the old Hamsticks until I could get the time to investigate. It turned out that the coax had gotten chewed up under the truck. A fast repair and it was OK for thousands more miles. I had a lot of fun from Florida and Georgia during the DX contest, the DX signals from all over were amazingly strong down there. I had many ragchews on 17 and 15 meter CW along the way.

I found lots of VHF and UHF on the trip, particularly out west, though I heard more in Florida than I ever have in the past. I'm happy to report that I heard lots of DSTAR everywhere I went, and in some places, that was all I heard. Linked repeater networks are everywhere these days. I drove through an area of southern Illinois where they have a bunch of linked machines covering a big area. They had a terrific morning net that I listened to for a couple hours as I drove through.

It's always fun to find those things, but it takes work to program the radios in advance. I had the repeaters for I-80 from here to California and I-10 back to El Paso already programmed, but I didn't have time to set up the repeaters on the eastern half of the trip in advance, so I had to do it as I went along. Each night, I'd program in the repeaters for cities along the next day's route. It worked well, using the K5EHX website.

Anyway, it's good to be home. I need to get that Field Day antenna built for the GOTA station now.

See you on the Thursday night nets.

1196. DSTAR Rigs and Welcome to New Hams

Yahoo group: rochester_hams
Date: 2012-06-01 15:45:16 UTC
From: Bill
Topic: 1196 Message: 1196

Scott, I am just using the ID-80 handheld. My next mobile will include DSTAR, i think, but I have many other places to put money right now. I was very encouraged by the amount of activity I found.

We have five new hams in the area now, after the latest set of classes and testing sesssions:

Ryan - KD0RXL - Ryan is the grandson of John, K0KTY, who wrote the original version of the class we're teaching. Ryan's mom has the K0KTY callsign, and they're working on a way to transfer it to Ryan, now, so you may hear it on the air again, soon.

Jose - KD0SBR adds another ham to Byron

Al - KD0SAA

Jessica - KD0RZY - another ham for Dodge County

Joe - KD0RZW

Again, congrats to all, and if you hear these newcomers on the air, give them a welcome and a helping hand!

1197. Tower Party Reminder - tomorrow 6/2

Yahoo group: rochester_hams
Date: 2012-06-01 19:07:51 UTC
From: Grant Kesselring
Topic: 1197 Message: 1197

Hi everybody,
I want to remind you about the tower party at my house tomorrow morning, Saturday June 2nd at 9AM. We will be practicing putting up the new military masts that will be used at Field Day. Please respond to me at kesselg@... by end of today if you plan to attend. I will try to have some goodies to eat after we are finished.

Again, the details:

What: Tower party, Field Day practice
Where: K1KD's QTH --- 6014 Woodridge Ct NE, Rochester. Email me if you need directions, or call 206-3542.
When: Tomorrow June 2 at 9AM

The WX report looks favorable so it should be a good morning for tower work. I hope to see you there!

73,

Grant K1KD

1203. Field Day tower party report

Yahoo group: rochester_hams
Date: 2012-06-03 02:41:18 UTC
From: Grant Kesselring
Topic: 1203 Message: 1203

Hi all,
I just wanted to write you all to let you know that the tower raising party did in fact happen today. A small but very competent team consisting of Peter W0LLN, Bob AB0BW, Jim KD0ORR and myself raised one of the military masts to a height of 54 feet in my yard with no problem. We did not attach any antennas. It was strictly an exercise in launching the mast and then bringing it back down. The whole process from beginning to end took us about three hours which included a mid morning break to munch on donuts and coffee, and a lunch break of Papa John's pizza courtesy of Dan KD0ORS (thanks Dan!) Given what we now know I think the whole thing could be done in under two hours. A team of five people is probably more than adequate to launch these masts. Probably fewer in calm conditions. We learned a few tips and tricks along the way, and I made sure to take a few notes and lots of pictures as we worked. I will send the pictures to Bob so
hopefully he can post some on the RARC website. We all concluded that a short pipe insert is our best option to make our mast-mounted rotors adapt to the towers. Jim KD0ORR has some scrape pipe available so he volunteered to fabricate something up.

Again, thanks to Peter, Bob, Jim and Dan for helping out today. These things are going to be the nuts for Field Day!

73,
Grant K1KD

Any one else making plans to operate in this weekend's ARRL VHF Party?
See http://www.arrl.org/june-vhf-qso-party

I've never done much on six before. Now with a decent rig there I'm going to try 6 mtr SSB. I've put together a delta loop (20' of wire in a vertical equilateral triangle, fed in the middle of the bottom side) and will have it set up operating single operator portable from my back deck.

1205. Rochester fest parade

Yahoo group: rochester_hams
Date: 2012-06-08 00:44:05 UTC
From: Steve Wiebke
Topic: 1205 Message: 1205

I need a list of radio operarators for the parade on June 22 for the 6:00 PM start. For those that helped last year I have your same position available. Please go the the RARC public service events web site and sign up. We can discuss locatioons on the Sunday nets or after the net if needed. 73

PS If you have already signed up thanks.

Steve,

I have signed up and will be available to work the parade. Can't remember if I worked last year, so not sure what position I would be assigned.

The black ARES/Field Day trailer contains the items listed below.
- Grant

Black ARES Trailer Content

(1) bucket assorted winches/handles

(1) AC Delco Battery

(4) 50' RG-8 Mini coax

(1) 25' extension cord

(1) 50' RG-8/U coax

(1) Dipole

(1) Loop w/window line feed

(1) 6' wooden folding table

(4) folding chairs

(5) sections pvc tubing

(1) claw hammer

(1) GP-3 Comet antenna

(1) small blue tarp

(1) bag tent stakes/rope

(1) large tent canopy

(3) Field Day signs

(1) orange water cooler

(1) desk lamp

(1) camping trash can

(2) tents

(1) black fan

(2) camp cots

(1) sleeping bag

(1) Rubbermaid trash can

(1) metal tripod (vertical base)

(1) fiberglass mast kit w/pulley

(1) orange spool RG-8 mini coax, 165ft

FD packets - education material

(10) packets polypro rope 100-150 ft - new

(12) 12" aluminum tent stakes - new

(1) roll carpet

(2) power strips

(1) Kenwood TS-140S

(1) MFJ watt meter

books/tools/lightbulbs/pens

heavy nylon rope

(2) rotors/cables/controllers

1214. Fw: Shelters/generators?

Yahoo group: rochester_hams
Date: 2012-06-12 03:19:21 UTC
From: Steve Wiebke
Topic: 1214 Message: 1214

Can the people listed below comment on the availability of trailers, generators, shelters or equipment for field day. If you brought anything to the 2011 field day let us know if you would be bringing it to 2012 event. List them under your name so we can compile a list ahead of time. 73

I do not know if the ARES trailer will be available this year. Rob what is its status for the CW station again. Can the new generator be used?

Grant I have a 1000 watt yamaha gnerator that you used on the CW station last year and it will be there again.

Date: Monday, June 11, 2012, 10:40 AM

Hi Steve,
Can you give me an update on the status of shelters and generators? From our meeting last Wed at Panera we had discussed these options for shelters:
1) K0RPD Explorer (long white) trailer
2) Roch EOC. Steve to check with Rob on availability.
3) AB0BW's trailer

Also, for generators I had written down the following:
1) W0STV, what brand/wattage is it? We talked about using this one for a CW station.
2) W0BM Honda EU 2KW (optional 6KW also, but only if in a pinch)

3) Rochester EOC 3KW. Steve to check with Rob if available.
4) Art Daniel's EU 1KW.

Let me know if I missed anything here. Do you mind confirming the availability of these different options for me? I'd like to summarize our plan for each stations (ie - shelter, generator, rig, computer, ant support, antennas, etc) at the RARC meeting.

73,
Grant

1220. Field Day 2012 Operating Schedule v1.0

Yahoo group: rochester_hams
Date: 2012-06-12 17:33:19 UTC
From: Grant Kesselring
Topic: 1220 Message: 1220

RARC Field Day Operators:

The following table is a first draft operating schedule for 2012 RARC Field Day. Each row is a one hour time slot and there is a column for SSB, CW1 and CW2 (digital) stations. The SSB and CW1 stations will be dedicated to those modes for the entire event. The CW2/DIG will operate a portion of the time on CW and a portion on Digtial modes. The yellow highlighted cells indicate that the CW2/DIG station will be operating digital modes, otherwise it will be CW. Scan down through the table and find your scheduled operating times. I assigned operators to slots based on:

1) feedback I received on the Field Day sign up sheet that was passed around at previous RARC meetings,
2) the online signup sheet on the RARC website,

3) individual email correspondence

4) my discretion based on our need to fill all time slots for all stations

I've tried very hard to accommodate individual operating time/mode preferences. Please carefully look over this schedule and respond to me ASAP if the times assigned will not work. I received lots of feedback on preferences, some vague, some very specific. It is possible that I may have missed something/someone. If you didn't get scheduled but wanted to be, let me know! Based on feedback we might have a few versions of the schedule, but I would like to get a final schedule by early next week so everyone can make preparations to be available during their operating times.

Also, I'd like to remind you that we will have opportunities for those who wish to operate Gota, VHF and QRP as well. These stations will operate in a somewhat more casual manner and as such do not require a pre-planned operating schedule.

Thank you to everyone for your planning and involvement so far. Your participation is going to make this a great event!

Thanks,
Grant K1KD

1222. Airshow Anyone?

Yahoo group: rochester_hams
Date: 2012-06-14 00:14:20 UTC
From: Bill
Topic: 1222 Message: 1222

There may be an opportunity to help out with an airshow in Granite Falls this weekend:

Public Service Event: Fagan Airshow, Saturday, June 16, 2012
Contact: Todd Mitchell, N0IP, Cell: 651-247-8345 , Email:
Todd.Mitchell.N0IP@...

Calling all volunteers! Please let me know ASAP if you are able and willing to commit to helping at the Fagan Airshow on Saturday, June 16, in Granite Falls. Currently we have five operators confirmed - two from Lyon County and three here in Granite Falls -- but my best estimate is that we really should have a bare minimum of seven. Greg Gibson, Fagan, Inc. has requested our assistance with remote parking/shuttle service service between the airport, the casino, and the City of Granite Falls. We need to put at least one ham at the airport and each of five remote parking lots as well as one NCS with a good mobile rig up on the south bluff of the river valley on the property of H & H Construction.

Volunteer briefing is at 1000; operations begin around 1100 and continue until 2200, with (I think) the most important part of the day being from 1000-1530. If you can help out during even a part of the day, please let me know ASAP what time(s) you can help.

From: RochHam
Topic: 1229 Message: 1229

I sent this out in an email to selected readers after last week's RARC meeting and never got a response. Bottom line:

1. I need someone participating in our RARC Field Day this weekend to accurately copy the special ARRL W1AW Field Day bulletin and bring it to me K0VH or Grant K1KD. Here is a link with the schedule for Fri night, Sat morning/night or Sun morning
http://www.arrl.org/news/w1aw-announces-2012-field-day-bulletin-schedule

2. ARES hams especially, would anyone originate a message to our MN Section Manager from the Field Day site later on Sat or even Sun morning? You should be able to start this on 2m FM as long as a relay station is willing to take it from there (perhaps to our 9pm Sun net or a Mon MN 80m section net?). Here is what we need for the message which should be able to fill in the xx's & tbd's out at FD, first the words then the actual text:

Number one routine HXCharlie [your call] check xx Rochester Minnesota [time UTC] June 23
Greg Widin K0GW 13457 6TH ST N STILLWATER, MN 55082 Break Field Day report for Rochester Amateur Radio Club X-ray [tbd] participants X-ray Location Game Haven Boy Scout Reservation X-ray [tbd] ARES operators Break
[your name & call] End of Message

and I think this is what'd get sent to ARRL when we do log submissions...now we just need to do it at FD!

1 R HXC [your call] xx Rochester MN [utc] June 23
Greg Widin K0GW 13457 6TH ST N STILLWATER, MN 55082
Field Day report for Rochester Amateur Radio Club X
[tbd] participants X Location Game Haven Boy Scout Reservation X [tbd] ARES operators
[your name & call]

Please contact me direct K0VH@... by Friday noon if you are willing to do either of these.

One last reminder: bring out any "inactive" hams or friends you have that want to try out ham radio to make at least 20 contacts on the K0RGR GOTA station SW of the parking lot! FD starts at 1pm Sat for 24 hours.

Thanks and 73 Dave K0VH

If you get a bunch of replies, take someone else -- but I'll try very hard
to remember to tune in and get the W1AW message. I should be able to get
it at least one of the times.

Peter

From: adler_187
Topic: 1226 Message: 1231

I went to submit my log and I got this back from the contest robot:

*** Informative Messages from the Contest Robot ***

[X] CLUB: Rochester Amateur Radio Club
The club name in your log entry was not recognized by the ARRL Contest robot. We want to make sure that your club receives credit for your score. The ARRL Contest official club name list can be seen at:

http://www.arrl.org/contest-club-list

Please spell out your club's full name and resubmit your log to the robot.

If you are not participating in the club competition, then you may omit the CLUB: line from your log or leave it blank.

Looks like the club official name is "Rochester (MN) ARC" after looking at the url listed above. Should I still submit with "Rochester Amateur Radio Club"?

Thanks Peter, I think I have Mel &/or Bill doing the bulletin but you can always do it for QRP bonuses. I suspect there are some bonus pts that we have plentiful (eg the news coverage in both the PB and now TV) that you can ride along with. 73

Date: 2012-06-21 21:03:42 UTC
From: Grant Kesselring
Topic: 1220 Message: 1233
Attachments: 1 described; binary payloads are missing from this source WARC

RARC Field Day Operators:

Just a reminder to please look over the attached operator schedule and respond ASAP if your assigned times will not work. I will send out the final schedule tomorrow which we will be following this weekend.

73,
Grant

Subject: Field Day 2012 Operating Schedule v1.0

RARC Field Day Operators:

The following table is a first draft operating schedule for 2012 RARC Field Day. Each row is a one hour time slot and there is a column for SSB, CW1 and CW2 (digital) stations. The SSB and CW1 stations will be dedicated to those modes for the entire event. The CW2/DIG will operate a portion of the time on CW and a portion on Digtial modes. The yellow highlighted cells indicate that the CW2/DIG station will be operating digital modes, otherwise it will be CW. Scan down through the table and find your scheduled operating times. I assigned operators to slots based on:

1) feedback I received on the Field Day sign up sheet that was passed around at previous RARC meetings,
2) the online signup sheet on the RARC website,

3) individual email correspondence

4) my discretion based on our need to fill all time slots for all stations

I've tried very hard to accommodate individual operating time/mode preferences. Please carefully look over this schedule and respond to me ASAP if the times assigned will not work. I received lots of feedback on preferences, some vague, some very specific. It is

possible that I may have missed something/someone. If you didn't get scheduled but wanted to be, let me know! Based on feedback we might have a few versions of the schedule, but I would like to get a final schedule by early next week so everyone can make preparations to be available during their operating times.

Also, I'd like to remind you that we will have opportunities for those who wish to operate Gota, VHF and QRP as well. These stations will operate in a somewhat more casual manner and as such do not require a pre-planned operating schedule.

Thank you to everyone for your planning and involvement so far. Your participation is going to make this a great event!

Thanks,
Grant K1KD

RARC Field Day Ops:

Attached is the final FD schedule. Please do plan on being present at your assigned station at the designated time on the schedule. If you have a conflict please find a replacement that can cover for you and let me know. Thanks! I'm looking forward to seeing everyone tomorrow morning. I plan on being on site about 8:30 so we can continue with tower/antenna work for SSB and Dig/CW2 stations.

73,
Grant

There was an adapter plug setting on some leather gloves in the CW1 trailer. I did not see a y connector. I have to drain the generator in that trailer later this week. I will check if there are any items left inside.

Great idea Bill. I have received lots of positive feedback from the ARRL already about it. It has been sent to Allen Pitts by League officials and others.

The RARC can sponsor the nomination after you find the dorms and write it up. We should also give her a local award. I will think of something before the July meeting.

Kind regards,

Scott Wright

1245. Field Day 2012 - what did you think?

Yahoo group: rochester_hams
Date: 2012-06-25 21:59:41 UTC
From: Grant Kesselring
Topic: 1245 Message: 1245

As the FD chair, I'd like to extend a heart-felt thank you to all of you for making Field Day such a success this year. We had outstanding media attention, high participation, important guests, few mosquitoes, low winds, and high q totals. In a few days, we will even start feeling rested again!

In the meantime, please do one thing:
While it is all fresh in our minds, please take some moments to collect your thoughts and send me an e-mail describing what worked well and what didn't and what improvements could be made. We collect these, then discuss them and implement many of the them. That's how we get better!

Thanks,
Grant K1KD

From the Winona reflector:
Come and have some fun at the GRSF special event station, N2B, on
Saturday & Sunday, July 7 & 8.

Operations will be behind the Winona Visitors' Center at Huff Street
just off US-61 (same as the prior two years). Hours of operation will
be 10:00 AM to 4:00 PM CDT both days.

This is a relaxed, fun activity. Please plan to stop by and join in.
There is always the opportunity to do some operating or logging--lots of
talking with other hams and guests, of course, (Bring some snacks!)

Some help could be used with set-up both mornings about 9:00 AM.

If you have any questions, please contact me.

73,
Len KC0RSX

From: rchrisope
Topic: 1249 Message: 1249

10-15 years ago, Peter Cross gave me this vertical ant. I am getting ready to move and will no longer have a need for it. In my current location, I am limited by covenants so I painted it black and hid it in the woods for the last 10 years or so. 1 4' radial is missing. All else is OK.

If any one would be able to use it, I will pass it on at the same price I paid for it---free, plus a small amount of labor to dis-assemble it into 10' (?) sections.

1250. Ham response to Duluth floods

Yahoo group: rochester_hams
Date: 2012-07-11 15:52:33 UTC
From: Bill
Topic: 1250 Message: 1250

It took a while to get the story, but this is the account of ham radio response to the Duluth floods, from the ARRL ARES Letter =

"Minnesota Flood 0f 2012 - Hams Respond

Northeast and north central Minnesota recently suffered one of its worst rain fall events in many years. As much as 10 inches of rain inundated this part of the state, and its effects will be felt for many years as recovery takes place.

A powerful low pressure area moved into the region from the Pacific Northwest on the heels of previous systems that had saturated the ground in the Upper Midwest. Along with another moisture laden front from the south, the stage for flooding was set. The National Weather Service had been warning of the potential for flash flooding in the days preceding the arrival of the system, and with the ground saturated, the potential became a reality as the area of low pressure moved slowly across the region on June 19 and 20. Torrential rainfall from severe thunderstorms that trained along the front caused havoc as many communities and counties were affected. Homes and businesses were flooded, and roads and bridges were either dangerously compromised or washed out by rushing flood waters.

Lake County Emergency Coordinator Jeff Nast, KCØMKS, reported that Northland SKYWARN was activated from 1800Z on June 19 until 0145Z on the next day. Lake County RACES/ARES was also activated on June 20 to provide emergency communications for a fiber cable failure at the Knife River expressway bridge.

Cook County officials requested disaster response communications for the hospital in Grand Marais. All communications were severed during the storm, and the hospital was without contact with the hospitals in Duluth. Pat Scully, NØWSI, made the request and a communications response resulted. "We were without phone, cell, Internet, and 911 service for approximately 12 hours," reported Jayne Fingerman-Johnson, NØUYQ, of the Cook County ARES Response Team (CCART). "We set up our Amateur Radio station at the Cook County Northshore Hospital to provide communications to the outside world."

Garry Hooghkirk, KDØDHB, Bob Schulz, KCØNFB, and Tom Kurtovich, KBØLSS, responded to the St. Louis County EOC in Pike Lake. Gary Hanson, KDØCVO, Dave Leslie, KC9MKJ, and Doug Nelson, AAØAW, activated the Douglas County, Wisconsin EOC to coordinate communications to Grand Marais as well as for net controls for a Duluth/Superior net to record road closure information to help travelers trying to get through the area. "We had people running net control from the Douglas County EOC, and St. Louis EOC was also manned," Nast reported. "We also had a presence at the NWS during the net." [See more info, links here.]

Nast activated the EOC in Two Harbors for Lake County. Bob Hoyt, KCØEIM and Grant Forsyth, KCØWUP went up to the radio desk at the National Weather Service office in Duluth to become real time providers of any weather information needed. Garry Hawkinson, WØELH, set up and monitored 7.250 MHz SSB as a back up.

Bill Fleischman, KCØZZL, located phone numbers for Life Flight to establish hard wire communications with them if needed. Ham communicators handled closure information and a

doctor replacement issue. Dave Miller, WØNWO, was instrumental in coordinating many facets of the response. Several local amateur operators went mobile and called in damaged areas to the net.

A call for help came in from MPR (Minnesota Public Radio): One of their reporters had a relative living up the shore in Two Harbors, and hams were able to give her information so that her Dad's medical supply service could get supplies to him.

Regular communication services were restored to the Northshore communities and the amateur response was no longer required. Thanks to the active participation by many local ARES members, a ready and capable multifaceted response resulted. Thanks to all operators who took time from their own issues to make Amateur Radio work in this time of need. While the severity and widespread magnitude of the flooding exceeded expectations, the hams were still able to meet the challenge. Once again, Amateur Radio proved itself as being the one reliable means of communication in a real emergency when all else fails. -- KDØCI's Radio Newsletter, July 2012 issue; by Doug Nelson AAØAW, with contributions by Jayne Fingerman-Johnson NØUYQ, Kenny Broshofske KDØCI, and Jeff Nast, KCØMKS "

This message was sent to all the Red Cross Volunteers, but since it will be especially interesting for ARES, RACES, or radio enthusiasts I thought I would forward the information along. Basically, Rochester will be playing host to one of the Red Cross's communication vehicles this weekend. There are only 12 of these in the US and it will be worth a drive over to the Red Cross Chapter to see it. (Chapter Address: 310 14th Street SE, Rochester, MN 55904) The vehicle is a swiss army knife of communications equipment that can handle everything up to and including powering all the equipment, electricity, and communications for a dozen people to be in a normal office setting complete with coffee maker and high speed internet even when there is no infrastructure outside of the vehicle. Internet and IP based phone service come over the satellite dish mounted on the top. Most have a retractable 50 ft mast and carry more than a dozen antennas to cover amateur, CB, and commercial bands. It also has capabilities to cross band repeat between any of these different radios. It really should be something to see since it will practically be in our own backyard.

Disaster Volunteers,

This Saturday and Sunday we are holding a ECRV (Emergency Communications Response Vehicle) training class at the Chapter office. The ECRV will be in Rochester for this training. I have attached a brochure with information about the ECRV.

If you are interested in viewing and learning more about this amazing vehicle it will be available for viewing on Friday July 20^th from 2 -- 3pm in the Chapter parking lot. So come over and take a look.

Thanks,

Due to a last minute drop do to medical reasons, we have a SAG van
without a communications person. Besides providing radio communications
you will also help load and unload bikes for your passengers.

MS TRAM is sponsored by the MS Society and is the short name for The
Ride Across Minnesota which starts this year in Bemidji and ends in
Alexandria. The ride is next week starting on Monday and ending on
Friday! I know this is short notice but it can't be helped. We will take
volunteers for one to five days. We are expecting close to 1000 riders
this year for an event that will raise almost a million dollars to help
fight MS.

If you can help out with this great, fun event, please contact *Will*
Ziegenhagen, Volunteer Coordinator at the**National Multiple Sclerosis
Society
Upper Midwest Chapter. He can be reached at 612-335-7992 or at:
mailto:Will.Ziegenhagen%40nmss.org

If you could also signup at http://www.ms-scram.org/, that would be great . That
is the web site for the communications team. It is also a good place to
learn more about the event.

If you have questions, please contact me directly at mailto:n0zrd%40mnyarc.org

Gordy N0ZRD
Communications Supervisor MS Bike Tours

Jim,

John - WB0ZFH is the person you want to get in touch with @
WB0ZFH@... <mailto:WB0ZFH@...> about if they need more
people.

Ok, I'll be there waiting and ready to roll out at 5:30. I'll have a radio set on the 146.820 repeater when I get on the way from my place,so if ether of us have a delay we can keep in touch.

1268. Looking for component tester - buy or borrow

Yahoo group: rochester_hams
Date: 2012-07-30 16:35:12 UTC
From: Jamie Ivanov
Topic: 1268 Message: 1268

I'm looking for a component tester that can verify npn/pnp transistors and their hfe values. If I could find one that can do capacitance that would be wonderful. I see things like the B&K 815, Peak Atlas DCA, etc (even some things like a ET521A would be fun). I'm in the midst of a project and would like to verify some component values.

I would like to buy something to have around but I'm too impatient to wait for something to arrive in a week or two. Even if I could borrow something for a few days, that would be helpful.

Topic: 1269 Message: 1269

FYI:

1a
Looking for help
Mon Jul 30, 2012 8:23 pm (PDT) . Posted by:
"Chris Schultz" ctechy
Hi Guys,
I found out this weekend that there is a duathlon (Run-bike ride)
in Alexandriaon Saturday September 1st. I spoke with one of the event organizers about
their communication need for the event. I would like to see how many of
our members would be able to volunteer for this event, before I make a full
commitment to them. I know for some people this would be a long drive;
but I would appreciate any support that you can give me. This is their second
year of organizing this event and I think our services could be of use to them.

http://www.zapevent.com/ListActivities.aspx?eventid=2356

Please let me know as soon as possible.

Thank you!!!

1273. Winona Special Event Station K0R Assists in Emergency

Yahoo group: rochester_hams
Date: 2012-08-05 18:26:33 UTC
From: Bill
Topic: 1273 Message: 1273

Here's an email from Virginia, KC5SAM. Next time you hear her on the air, please give her a 'Well Done':

I have to tell you a LONG STORY. Last night a storm hit with high winds and lightening, etc. We had limbs down again, sunflowers snapped off and flower pots turned over, etc. It was still raining just a little bit, some dark clouds would come and go. Ken was anxious about going and about taking the motor home. I finished loading things up, the food and last minute stuff. We headed for Red Wing and the park. There were huge trees down all over Red Wing, They came out of the ground, roots and all. There were several of them down in the park, across the roads in the park and all over. Huge branches also. Things were blown everywhere. Two of our ham friends were there holding the spot for the motor home so we could locate it to the best advantage. All the things that wouldn't work for us last night worked just fine today. I made 7 or 8 digital contacts, including a submarine near Manhattan Island New York. The SSB station got set up and running and I stopped the digital due to interference. I was over at the SSB station and while KB0LYL was calling CQ and taking calls from a pile up and emergency call came in from Canada. On the Alaska highway there had been a head on collision with a sedan and a motor home. The highway was blocked. There were some non life threatening injuries, traffic control and medical assistance was needed. There was no cellular signals in the area. They needed to relay their location and the situation to the Canadian officials. It was a long process getting the questions answered on both the desperate station and the Canadian officials. There were many phone calls back and forth to the Canadians and on the radio to the ham that called us. A Canadian EMT arrived on the scene somehow and clarified, in Canadian terms, the location of the accident. The ham was rendering aid to the injured and directing traffic and not available consistently. The special event resumed in between calls when we were waiting for response from the radio operator.This all went on for quite a while. It is the first time I heard long spells of silence during a special event, on the local/live side and on the air. Then one of the friends of the ham who called us for help came on because he was hearing part of this and we had to communicate with him. He was wanting to relay but couldn't hear his friend.
We had rain showers and some fairly strong winds while we were in the park but they weren't heavy or for long. I don't know how many contacts were made during the event, but the it was the emergency one that counted most. We were totally exhausted by the time we got home and unpacked the motor home. Ken managed the motor home just fine in the abundance of cars and traffic in the park. He is glad now that we didn't sell it last week. Working the digital in the motorhome was really quite nice.

1274. Wild tropo on 2 Meters

Yahoo group: rochester_hams
Date: 2012-08-08 18:08:57 UTC
From: Bill
Topic: 1274 Message: 1274

I've been hearing some pretty wild signals on 2 meters this week.

The other morning, I listened in on a big net on the same frequency as the #2 repeater in Austin. The net was in Indiana.

Today, the Twin Cities machines are in here pretty strong. I just worked one of my last crop of students, now K0KAK, on the Hampton repeater. He was using EchoLink from his iPhone, because he hasn't acquired a radio yet. I also talked to a fellow in Cottage Grove who was into the Hampton repeater with 5 watts and an indoor antenna.

That brings me to another subject. Would there be any interest in a local 2 meter net in the daytime? I've been thinking about starting an informal daytime net for some time now. The net would have no other purpose than socializing and maybe helping people get on the air. I wish we could build a network of area repeaters to tie together for the net like they do in other places, but we will work with what we have.

My wife works late most nights, so I could not start a net much earlier than 10 o'clock, which might be too late for most folks. What do you think? I'm usually scanning the local repeaters in the daytime, anyway.

1275. Get Together for SET

Yahoo group: rochester_hams

From: Bill
Topic: 1275 Message: 1275

Simulated Emergency Test is an annual ARES exercise to do just what the name implies - test our preparedness for emergency situations.

Last year, in Olmsted County, we had a successful SET exercise. It was pretty basic, but we tested the callout procedure, staging on the air, and getting people to their assignments.

This year, we're going to expand it a bit. We're planning to test more of the things that we are actually committed to doing. At the same time, we're hoping to have some fun and some training opportunities for everybody who wants to participate.

I've reserved the West Room at the Red Cross for 9-12 on Saturday morning, October 6th.

Our ARES commitments in Olmsted County focus on the Red Cross, both EOC's, and the hospitals. Across the entire Southeast Minnesota region, we have responsibility to the SE MN VOAD Council, the Red Cross, and the hospitals.

I've asked the EC's in all of my counties to plan for SET. I know we will have participation from several other counties. We'll be establishing communications with hospitals in the neighboring counties, and other places between LaCrosse and Blue Earth. I hope we can also get the Red Cross chapters talking to each other.

We'll be using voice, digital, and if the creeks don't rise, WINLINK, IRLP, and maybe even DSTAR. I'm planning for HF as well as VHF/UHF.

So. please plan to join us on October 6th. I hope we'll have a good exercise and a good show!

1278. Red Cross Shelter Drill

Yahoo group: rochester_hams
Date: 2012-08-10 21:21:10 UTC
From: Peter Crowley
Topic: 1278 Message: 1278

Help needed!

Due to a communication problem, I'm scrambling at the last minute to get some people to help with a Shelter Drill on Monday night. The Red Cross has practice drills periodically and we normally have other Red Cross volunteers that are not participating in the drill to act as disaster victims. This might involve some role playing and character acting and is generally a light atmosphere and enjoyed by all. Due to the late notice being sent out, I'm not sure that I'll have enough people to act as disaster victims this time. If you have a few hours Monday night, please help us out and pretend to be a disaster victim during our drill.

If you would like to see the inner workings of a shelter or are part of ARES and might get assigned to handle communications for a shelter this might be a good opportunity for you to see what goes on outside of a real disaster.

Victims can show up anytime between 6 and 7:30PM and leave whenever they feel the need. Snacks and beverages will be served by the shelter team during the drill. The drill will take place on Monday August 13th at Church of the Resurrection 1600 11th Avenue SE, Rochester, MN 55904

Thanks in advance,
Peter Crowley (KN0CKS)

Hello Everyone:

Here is a request from FOX9 NEWS & MN Science Museum to get HAMS to come out and help support the showing of the TIV at the FOX9 Studios here at the Minnesota State Fair. The Sibley County Skywarn Team is covering the Tuesday Date 8/28. They are looking especially for ones who have stories to share of storms that were bad too.....FYI. Not required, but encouraged none the less.

Please reach out to Kate at the Science Museum directly if you can help her out here. She needs to have this scheduled hopefully by the end of the business day on Monday, August 21st.

Don Burgess – KC0QNA

Hi Don,

Here's the list of open shifts at the Fair (as of 8/17). The number in (_) indicates the number of open positions with a max of 2 people per shift.

Thursday, Aug. 23: 9a-1p (1), 1-5p (1), 5-9p (2)
Saturday, Aug. 25: 5-9p (1)
Sunday, Aug. 26: 5-9p (2)
Monday, Aug. 27: 5-9p (2)
Wednesday, Aug 29: 1-5p (1), 5-9p (2)
Thursday, Aug. 30: 5-9p (2)
Friday, Aug. 31: 9a-1p (1), 5-9p (1)
Saturday, Sept. 1: 5-9p (2)
Sunday, Sept 2: 5-9p (2)
Monday, Sept. 3: 9a-1p (1), 1-5p (1); 5-9p (2)

Thank you for your efforts! I appreciate it.

Bill, I'd vote for a weekly late morning ragchew net. Perhaps 11 or 1130-12 and pick a day: Monday? or maybe Tue. Seems like with RARC meetings that could also be a meeting reminder and if no meetings we have our 10m net that night however perhaps overkill on a day) or Weds or Thurs. That time might find some lunch hour people able to get on the air. It also might be bad if they are out having lunch with non hams, so an alternative is 430-5+ to line up with commute times.

I also think RARC should sponsor a one month 2m fm repeater "contest" in Sep or Oct using any of our RARC local repeaters like you did a few years back. Honesty system paper logging is fine although DSTAR should have it's own log? Perhaps a 1st prize of free 2013 RARC membership, 2nd free small plate at Hardys BBQ ... or something. A few of us also discussed this at Hardys before the last meeting. We need to monitor those repeaters more.

1285. Informal 2 Meter Net and Technician Classes

Yahoo group: rochester_hams
Date: 2012-08-20 19:35:23 UTC
From: Bill
Topic: 1285 Message: 1285

I just found K0VH's response to a question I posted quite a while ago. For some reason, Yahoo thought it was SPAM.

Dave had some suggestions about starting a weekly two meter net in the daytime. I'm thinking maybe a daily net starting around noon time. It would be VERY informal.

Which repeater would people prefer? I think I'd like to see it on the 146.625 since that machine gets less work, and that would let us add folks via EchoLink.

Meanwhile, I have scheduled a new Tech class for September 22nd and 29th. I hope I have enough students to make it worthwhile. Please spread the word, and if you have people who are interested, have them email me (mycall@arrl.net) to let me know they intend to attend. They need a copy of the current License Manual, and the class is $25. I'll be doing the class in my living room, which I've decided is perfect for a small group - the big screen TV is easier to watch than an overhead, and I have Internet access and a full station or two to demonstrate.

Also, if anyone feels they need a 're-boot', I'm available, and the class might be a good time, too.

I messed up this week. I was going to throw out an invitation for newbies to come over and do the 6-hour Rookie Roundup as a group entry this Sunday, but I forgot about it. It was the RTTY weekend. I got on for a couple hours and made a few Rookie contacts. These Rookie Roundups are for anybody licensed in the previous three years. There are three Sundays each year - Phone in April, CW in December, and RTTY in August.

From: Bill
Topic: 1287 Message: 1287

Ryan Kohlmeyer, KD0RXL was on page one of the Rochester Post Bulletin yesterday! His science project on 'ham radio' (they spelled it Hamm in the newspaper!) was one of the four Grand Prize winners selected to appear at the State Fair. Ryan's hoping to do well in the state competition, too.

Ryan is the grandson of the late K0KTY, John Reed, and the son of John's daughter Sally, who now has the K0KTY callsign. He took our class this spring and I was happy to work him on the .82 repeater recently. I hope he finds more time for hamming once his state fair competition is over.

If you hear Ryan on the local repeaters, give him a well deserved 'well done'.

I don't know if that's a good thing or not. Whenever I comment on a commission action and make a suggestion, they usually respond "No". If I argue that the sun rises in the east, they argue that it rises in the west.

This time, in at least one of my comments, they seem to have responded favorably, and then used that suggestion - that FEMA and DHS encourage the establishment of more amateur club stations - as an argument against pre-empting the CC+R's.

The most encouraging thing in that otherwise unhappy report is the statement that if Congress gives them the authority, they will act to make exemptions to CC+R's - so maybe there is slight hope.

All,

I am not positive as far as how much D-STAR will be used for any traffic relating to Hurricane Isaac but some reflectors to possible monitor are the following:

Reflector 036C Central FL
Reflector 047C North Florida

Reflector 02(B?) Alabama
Reflector 48(B?) Louisiana

There might be some D-RATS activity on the main, North Florida and Alabama ratflector (data hotspots).

From: Bill
Topic: 1295 Message: 1295

I'm pushing three nets now - and it's sometimes a little like pushing a rope. But I will persist... We do have some 'regulars' who show up all the time.

With SET coming up in October, I really want to encourage people to be prepared for digital operations.

On Thursday night, there are digital nets. At 8 p.m., we're on 3583.5 (USB frequency), usually around 1200 on the waterfall but +/- to avoid QRM. We use Olivia 8/500 for this net.

At 9 p.m. on Thursdays, we have the digital net on 147.255 (PL100). We are going to start calling this net on voice first, before switching to digital, in order to see if we can drum up some more participation.

And finally, Mon-Fri at 11:30 I've been trying to organize a very informal net on the 146.625 repeater. If you're around at that time, join us. If you show up and there's no net control, become one. I usually connect us to the MN_CONF on EchoLink and you can also connect to the W0STV EchoLink node directly. Yesterday, K0VH checked in from Madison using EchoLink on his smartphone.

In addition to the Tech class I'm starting on the 22nd, Winona radio club has a set of General classes starting early next month for those wanting to upgrade and willing to take a short drive:

"Persons seeking General Class amateur radio licenses are invited to participate in the Winona Amateur Radio Club's fall licensing course and test session.

WHAT: General Class Licensing Course followed by license testing session.

WHO: Technicians interested in advancing to General Class. Also for persons interested in obtaining Technician Class license and General Class at the same time (recommended for persons with strong technical aptitudes).

WHEN: Classroom Sessions: October 8 through November 12--Monday evenings for three hours from 6:00 to 9:00PM. Includes review and testing preparation session.
License Testing: Monday, Nov. 19 at 7:00 PM. Testing will be available for all classes of license.

WHERE: Winona State University, Watkins Hall Room 105 (King & Winona Streets), Winona, MN. Parking will be available adjacent to the building on campus.

COSTS: Classroom Sessions: The cost of the course will be $29.95--for the General Class study manual (7th Edition). Persons with their own copy of the 7th edition can participate at no cost. It is HIGHLY recommended that students obtain and use a copy of the current study manual. Course fee is due at the first classroom session.
License Testing: The 2012 license testing session fee is $15.00 and is payable when registering for the testing session. The session fee allows testing for multiple classes of license at no additional cost; however, a test re-take for a specific class of license does require an additional $15.00 fee.

REGISTRATION: Registration deadline for the course is Sunday, Sep. 30, in order to permit time to order and obtain study manuals for students. Register by contacting Len Litvan, KC0RSX by email at Litvan@... ; by phone at (507) 643-7526; or USPS at 25567 Miner Valley Road, Winona, MN 55987. Registration deadline for the testing session will be Monday, November 12.

For additional information, please feel free to contact Len via the above email address or phone number. "

The antenna tuner at the EOC has a ground circuit problem. It will not be ready for use this week end. I hope to have it ready for Oct 6th. More later.

I plan to try this week, I have an open Thursday for once (next week is our wedding anniversary so that one won't work either). I have my IC746 hooked up on digital ... will try 50W first and if no cross town prop will hit it with 100W on HF. And it has 2m which my 1st gen IC703 does not.

On a different note, do you recall the two hams who got the 10m loaner rigs? I am sure they are discouraged by the lack of propagation, not much e skip even these days, but I would like to email them about getting on the Tue 8pm 28.325 nets to practice some local HF if nothing else. I hope 10m gets hot again for them and the rest of us, and if so maybe we can recirculate those radios to some newer Techs from your upcoming class.

1303. Winona Excursion Train

Yahoo group: rochester_hams
Date: 2012-10-11 16:29:23 UTC
From: Bill
Topic: 1303 Message: 1303

Winona is looking for help with their annual excursion train. Contact Erik Brom if you want to help:

Date: Wed, 10 Oct 2012 19:44:35 -0500
From: Erik Brom <ewbrom@...>
To: nelsonp@..., jsherod@..., gp30cnw@...,
sdonahue@..., warc@..., charlest@...
Subject: [WARC] Its train time again - Oct 14 this year. URGENT
Message-ID: <50761673.6070308@...>
Content-Type: text/plain; charset=ISO-8859-1; format=flowed

I'm not sure this email went out the first time. The train will be here this Sunday, and we still need some help.

Even if you can't make it this year, please reserve the time again next year. I'm pretty sure it will be 261 pulling it, and the foamers are sure to be foaming!

Thanks,
Erik

==========

Hi All,
As has been the tradition for several years, there will be an excursion passenger train coming to town this fall. I received the annual call from Judy Sandberg yesterday! This year its Sunday October 14.

As steam engine 261 is still down for repairs, it will be a diesel engine again, and will be much like last year. I think 261 will be back next year.

For anyone new to this list: railfans and hams in Winona help with crowd control at the Amtrak depot. The train arrives from the Twin Cities around 11:30, exchanges passengers, then makes a round-trip to LaCrescent, arriving back in Winona somewhere around 1:30 - 2:00, exchanges passengers again, then departs for the Twin Cities. Its not quite as big a deal when it is diesel powered, but we still need to help keep spectators out of the path of the oncoming train!

If you are interested in helping, please let me know you are available. Please give me your cell phone number, and if you are a ham (that I don't know), your call sign.

We will be using safety vests again this year. Please bring one if you have it. If not, I have some. If you have a radio, the CP RR is on 160.770, and hams will be using 146.49 simplex.

Judy again extended the invitation for us to ride the LaCrescent trip. I would like at least half the crew to stay and be ready for the return trip's arrival, though. But, if you haven't ridden for a while, feel free to do that.

Thanks,
Erik

Don Burgess, KC0QNA posted this:

Hello Everyone:

I am playing Radio Officer for this weekends Belle Plaine MN Scenic Half Marathon & 5K Race which happens this Saturday, Oct 13th at 9 am. As of today, I am currently short about 5 hams for various locations.....so I am reaching out to one and all, and see if anyone can spare say 3 - 4 hours this Saturday and help us out? As of right now, close to 1500 runners are planning on appearing in Belle Plaine, plus now with Mother Nature expected to end our drought at the start of the race, we can use both SKYWARN and Course radio operators.

If you think you can help us out here, please email me at: kc0qna@... or call my cell phone at: 612-578-7561.

Thank you,

Don Burgess ☐ KC0QNA

All,

I heard this on the SE Weather Net on Sundays at 8:00PM on reflector 2A and passed this on the Wisconsin Sunday D-STAR net. I will mention this here as well.

One reflector to try listening to for any traffic relating to Hurricane Sandy is Reflector 20A. Check the reflector listing (http://ref020.dstargateway.org) for more information. If it passes to New England, there maybe some activity on Reflector 10 (check http://ref010.dstargateway.org) for more information.

If there would be any slow speed data traffic (probably using D-RATS), it might be on these reflectors or use the main "Ratflector" using D-RATS. If you would like more information on trying this, let me know.

Reflector 20 is currently offline, probably due to power failure at the server site. I had the W0MXW D-Star repeater connected to it this morning, but there was not a lot of activity (a few people heading to EOCs, etc)

Reflector 10 is still online and W0MXW is attached to it at the moment, but traffic is conversational.

From: Bill
Topic: 1318 Message: 1318

The Field Day results are on the ARRL website.

I won't steal the thunder - our president should announce this. Not only were we #1 in Minnesota, we couldn't have done much better! Think 'AVIS'.

1319. Stormchaser contacts needed

From: Peter Crowley
Topic: 1319 Message: 1319

For my role as a Red Cross Volunteer, I would like to contact someone who can speak for the storm chasing groups. I'm not sure what the official name is, but I think it might be Skywarn. I'd normally ask for contact information, but don't know how private this forum is, so please don't post someones phone number or email. If you know who to contact, please send me an email with the information to the following address: kn0cks.cq@...

Thanks

The organization is called SKYWARN and it's run by the National Weather Service. Most of the ARES folks also do SKYWARN. Todd Shea at the NWS office in LaCrosse is the fellow who runs the program here. The counties to the west of Dodge County and north of Olmsted mostly report to the Chanhassen NWS office through linked repeaters in that region.

This is an up to date map of the Chanhassen NWS SKYWARN network:
http://www.steelecountyskywarn.org/Repeater.html

Here is a list of frequencies from the LaCrosse NWS web page:
http://www.crh.noaa.gov/arx/?n=hamradio

All of the ham SKYWARN frequencies for the state are listed on the ARES web page:
http://www.minnesotaares.org/files/SOP%206-C-003%20SKYWARN%20Frequencies%201F.pdf

That document has lots of good information, and if you have a smartphone, you might want to store it there for reference.

Congratulations to RARC which placed number 2 in the USA for class 3-a. We were only ~600 points shy of the top score.

I believe this is the top score ever for RARC.

Thank you to our Field Day Team.

Kind regards,

Scott Wright

If you are signed up on the RARC web site for the Gamehaven public service event thanks for helping. There are two more not on the list. Me W0STV and Dan KC0VMC who will be helping with the event.

The talk in and operating frequency will be on 147.255, PL 100. Please be at Gamehaven before 8:00 AM this Saturday. Dress for the weather. Make sure you have battery power for 4 hours for the event. For those that did this last year you will be in the same postions as before.
Any questions call me 254-3993

Steve - We've never really had much for attendance at this event from Rochester folks. If you could help us spread the word, that would be great.

On Fri, Nov 16, 2012 at 12:10 PM, Todd Shea <todd.shea@...> wrote:

Hello partners and SKYWARN volunteers -

On Saturday December 1st our office will be hosting SKYWARN Recognition Day to show our appreciation for Amateur Radio operators that assist with storm spotting and relay of weather related traffic. Amateur radio services and information relay is a key element of our warning process.

This "open house" event will involve operating HF radios and making contacts with other operators and NWS office around the country/world. We encourage you to spread the word around your club or group to visit our office that day. We will most likely be operating between 8 a.m.- 4 p.m. so you are welcome to stop in for a short time, spend an hour or so helping make contacts, and/or visit other operators and storm spotters from around the region.

We won't have any time assigned sign up sheets, but we typically can use radio operators.

The national web page for the event is at: http://hamradio.noaa.gov. You can view our results from last year at: http://www.crh.noaa.gov/arx/?n=ham2011

Again - Thanks for your assistance through out the year(s) and hope you can stop in on Saturday December 1st.

1332. REMINDER-Tue 8pm 10 meter net & discussion topic

Yahoo group: rochester_hams
Date: 2012-11-19 19:53:43 UTC
From: dcnaatz
Topic: 1332 Message: 1332

This is to remind all of you about the Tuesday Nov 20 8pm Rochester 10 meter net on 28.325 mhz upper side band voice. I am net control this week and am going to propose we have a basic topic of discussion from the Dec QST article pg 45 "Vertical or Horizontal HF Antennas: What's Best for You" by Joel Hallas W1ZR. We'll have a Q&A type of discussion applicable to both new and experienced hams: ie, even after reading the article* you may have some questions from it or just want to put out personal experiences you have had using both types of antennas (Horizontal being dipoles, G5RVs, yagi beams ... Vertical is 1/4 wave verticals or variants using traps, coils, stubs, 43ft w/base tuner).

For those new to HF nets, this net tends to be more informal than the 2m ARES net since we typically have 3-6 checkins (would be great to get 2X that!) and we can go around to all checkins 2-3 times for questions and comments on the topic or anything of general interest. If you are not on at 8pm we'll standby for checkins later or just give your callsign in breaks as we pass the conversation around. Please make a note on your calendar and if you cannot make it this week, try for same time and frequency on Nov 27, Dec 1 or other non-RARC meetings Tuesdays.

73 Dave K0VH dcnaatz@...

* If you don't get QST let us know and we will summarize points from the article for you.

I was surprised to hear a call from Justin (didn't write down the call) in Wausau, WI on the 82 repeater. We talked about how great the conditions must be when KG0SJ broke in to say 'hi' and that he was hearing from Fort Dodge, IA. Those two made an FM contact on our repeater across about 270+ miles. It was a good night on .82.

1339. NASA Now Accepting Applications

Yahoo group: rochester_hams
Date: 2012-12-07 23:38:37 UTC
From: Bill
Topic: 1339 Message: 1339

Anyone know of a local group that would qualify?:

+ Amateur Radio in Space: NASA Now Accepting Applications for Hosting a Real-Time Conversation with ISS Crewmembers

NASA is now accepting proposals from US schools, museums, science centers and community youth organizations -- individually or working together -- to host an Amateur Radio on the International Space Station (ARISS) contact between May 1, 2013 and November 1, 2013. To maximize these radio contact opportunities, NASA is looking for organizations that will draw large numbers of participants and integrate the contact into a well-developed education plan. Radio contacts are approximately 10 minutes in length. ARISS contacts are supported by the program's US partners -- the ARRL and AMSAT -- and their member volunteers, as well as other international space agencies and Amateur Radio partners. Proposals are due January 28, 2013.

Interested parties can visit the ARRL website or the NASA Teaching From Space website for information about proposal requirements and how to submit a proposal, as well as links to audio and videos of archived contacts. Five information sessions are also available for groups who are considering submitting an ARISS proposal. Access to the Internet and a telephone line are required to connect to a session. Information on how to sign up for these sessions is available on the ARRL and NASA website

The band was wide open. I heard repeaters from Iowa, and Wisconsin.in the mobile in scan mode. Some where poor audio, but I could hear enough to conclude their general location, (9 calls). Mel would like to have those conditions for the January contest. 73

I was surprised to hear a call from Justin (didn't write down the call) in Wausau, WI on the 82 repeater. We talked about how great the conditions must be when KG0SJ broke in to say 'hi' and that he was hearing from Fort Dodge, IA. Those two made an FM contact on our repeater across about 270+ miles. It was a good night on .82.

1346. Club Meetings

Yahoo group: rochester_hams
Date: 2012-12-11 23:09:08 UTC
From: Bill
Topic: 1346 Message: 1346

Hi gang, once again, I come hat in hand looking for ideas for future club meetings.

So far, I have two meetings booked for 2013. If I throw in the club picnic and Christmas party, that only leaves 8 more to find speakers for. I need a program for February. I have requests out to two other people, hoping they come through for us. Both are ham celebrities who are known to do local radio club meetings in person or via SKYPE.

If you have a favorite topic and would like to share it with the rest of us, here is your opportunity to hone your public speaking skills. It should be radio related in some way. Or, if you yourself aren't wanting to do a show and tell, but you know someone, or know of someone who would, drop me a note. Likewise if you just have an idea for a good club program.

One thing I'm kicking around with myself (you knew I talk to myself for good reason) is an auction. It will take a few months to set that up, but if we want to do it, we should do it before SKYWARN season starts, or wait until next fall.

Please let me know (k0rgr AT arrl.net) if you have ideas.

Our January Speaker is Barry Altman, W6GFN, who is the Red Cross EMCOMM coordinator for Southern Minnesota. Barry will be telling about recent disasters he's been involved in, and how ham radio played in those scenarios. The program will be about 90 minutes, so it will run a bit later than usual.

I would propose a program on how ARES works in the NIMS structure for those that are only interested in using their radios during disasters. No test, just a 10,000 foot view of how you get registered into a disaster who you answer to, What structure you are under if you are at communications, staging or damage assesments. The difference between formal and informal radio traffic.etc.

Randy Brock is a ham and the KTTC weather man. I field trip to their station to see how they do the forcasting the weather and operations before and during severe weather.

Since field day 2013 will have new Icom radios loaned to us. Present a class on how they are adjusted for various modes and bands. Explain features and operations for HF in general. How do you zero beat a CW signal. What do those radio knobs all do. . This could be done before field day.

OK, things are coming together for the first half of the year. This is what I think we have so far:

January - Barry Altman, W6GFN - Red Cross Disaster Services

February - the owner of QTH.com on how to safely buy and sell radios on the Internet

March - ARES and NIMS - Robert Andrews K0RDA

April - radio tuneup night - check out your mobile and handheld radios and antennas. We'll round up test equipment and 'experts' to help do it right. We'll also have an assortment of programming cables and tools on hand if you want to get all those memories set up, just in time for SKYWARN.

May - Erik Westergard - Twin Cities DSTAR and 145.67 network - I think you will be amazed at what they have!

June - Using ICOM Radios for Field Day (we are getting three IC7700's as 'loaners for the contest)

Other things I'm working on for the second half of the year:

Swap Meet/Auction - maybe with the picnic?
'Now that I got my license, what next?'
We were invited to tour the KAAL transmitter site
Ham Nation SKYPE meeting
and at least one more...

If those come together, I think we'll have it covered. I am still welcoming great ideas! I think it will be tough to come up with the caliber of speaker we enjoyed this last year, but I think we're off to a good start!

I was in the TCs all day yesterday and meant to reply this morning but others beat me to it.
I think you have some great ideas here, a good mix for experienced (HF or Pub Svc types) and one to sell to new hams. With some prepublishing many can plan ahead; my wife's flower club does this even though things do change.

Bill

Great job.

It will be tough to do a demo in June with real radios on how to use the filtering. Instead there are some great video segments from Julian N3JF on how to use the IF DSP that will nicely demonstrate what the club needs.

Kind regards,

Scott Wright

Bill, this is very nice. It seems you went from "hardly anything" to "quite a lot" in just a couple of days.

At the Tuesday party I suggested to Grant that we add to our Field Day stuff: a triband multiplexer, such as the Inrad Triplexer. This would allow the GOTA station to share a beam with SSB. What's your reaction?

I want to put more emphasis this year on beginners, starting up in new activities, and participation in unfamiliar activities. I don't think this will have any effect on programs, there's already a good mix.

1353. A Plaintive Plea

Yahoo group: rochester_hams
Date: 2012-12-14 20:34:15 UTC
From: Bill
Topic: 1353 Message: 1353

While I'm on my soapbox, I'll pontificate a bit more.

There are two things that keep me awake at night. The first is worrying about my children. The other is worrying about my 'radio kids' - the ones who are often older than me that I've recruited, trained, or just encouraged to get into ham radio.

We had a really great meeting in Dodge County last night, to start a new ARES organization there. We had a total of 5 volunteers show up, including the new EC, KC0CLC. Three were relatively new hams who got involved mostly to do SKYWARN but are also interested in other aspects of ham radio and public service. And there was one familiar volunteer who has been licensed longer than I have.

Unfortunately, the newbies discovered that the activity on the Rochester repeaters is so low that they rapidly lost interest, and dropped out of the hobby. The more experienced ones have given up on 2 meters for the same reason.

Olmsted County has twice as many hams as any other county in southeast MN, more than some of the Twin Cities counties. I monitor most of the repeaters in the area when I'm here, and compared to some of the machines in the region, ours are seriously dead.

We have EchoLink on the 146.625 repeater, and that is used on rare occasions, mostly by some guys who used to be locals and like to check back with their friends here. Unfortunately, the way it's implemented, we can't just set up a link to one of the big Echolink nets out there and leave it up. There are some nets that I think people would enjoy that you can access on EchoLink, like the Saturday Swap Net from the Twin Cities and the Handhams Net. How many people know that Handihams was started here in Rochester?

We also have IRLP but it is on simplex, not a repeater. It would be great to have that dialed into the Insomniac Net every night, but we have to get the timeouts turned off, and we can't use it on a repeater at this point because of the IDers and squelch tails.

Overall, we just need people to pick up the mic and say something much more often. I understand that it only takes one lunatic or one drunk to run people off the repeaters in an area, and I don't think we've ever recovered from the last couple of those. I know we all work for the same two employers, so there is some reluctance to chat there for fear of saying something 'out of school'. But, we need a firm policy that what happens on the repeaters stays on the repeaters.

Having the same 3-4 people being the only ones on the repeaters every day doesn't cut it. If I started out in that environment many years ago, I'd have dropped ham radio to go find something more interesting, too. If I could get FCC to change it, I would, but I already asked them to and they said no.

We are trying to have a Very Informal Net daily Monday through Friday. I was doing it on the 146.625 repeater, but the .82 and .255 are fair game, too. I would love to see a regional chit chat net there like they have in other places.

Starting this weekend, I intend to move the Digital ARES Net to 6:30 p.m., Sunday, on the 147.255 machine. We use the NBEMS software and MT-63/2000 protocol, which works pretty well if you do 'acoustic coupling' by holding the radio close to the computer mic and speakers. I intend to start the net off by taking voice checkins.

Anyway, consider trying two meters again. The radio kid you save might be your own.

I think the repeaters suffer the same fate that all of the rest of Ham Radio is suffering and we are on it right now. The internet, and in addition smart phones with texting has replaced it for many. I know I am on the internet much more than radio. The repeaters have a hard time competing with twitter and facebook. I have no solution.

1355. Heads Up on Baofeng Radios

Yahoo group: rochester_hams
Date: 2012-12-15 15:59:05 UTC
From: Bill
Topic: 1355 Message: 1355

I bought a Baofeng UV5R from my usual Chinese radio supplier - wouxun.us - and had it shipped to a disabled ham who is in pretty bad shape. No, my name isn't Santa Claus, and I don't normally do things like this, but this guy needed it more than I did.

This is part of an email I just got from him:
"hey Bill , if you have or have not ordered a baufeng radio, I urge you to think twice on getting one, Check out this video,
http://www.youtube.com/watch?v=X0mdrCx8GXs"

Apparently, after being on for a few minutes, it sounds like the squelch circuit starts pulsing, emitting a real racket. My friend's rig just started doing the same thing. I've asked him to try a couple things like turning up the squelch if that can be done, and if that fails, send it back.

I wish I had bought it from Radio City - I learned my lesson. But I've had real good luck with wouxun.us, too, so I hope they come through for us on this one.

I can agree on the points mentioned and I will be trying when I am around town this winter to monitor the 3 main 2m repeaters and 52 simplex whether I am in my shack or with my handheld upstairs. Yes the internet does take more time but it's easy to multiplex with a radio scanning while reading or typing on the web. I see similar problems for 2m in the car compared to years ago with the better sound systems, nav through the car screen and of course passengers taking priorities (no texting while driving and this bluetooth/cellphone connection makes talking on the phone safer than 2m, my opinion).

Bill, you got it right: "we just need people to pick up the mic and say something much more often". My 2m HH is out of the car for the winter (just too hard to operate small knobs w/gloves). But for warmer months whenever I was alone in that car or the Jeep my wife mostly drives that has my hardwired 2m rig, I would always at least ID my call on 82. I did run into others around Rochester to yack a few times, many times it was you. I am not on early in the morning so my normal listening times are after 9am until 5pm M-F and that varies too being in a bunch of volunteer groups some days, but will try and check out the 625 11:30 ragchew "net" this winter when I'm around.

What's interesting is in car trips to Madison, TCs like this past Weds, or driving my Mom to Mayo every 6 weeks I do find others listening on repeaters along the way. Some like the former big gun Baraboo 88 machine are very quiet now - they may have the same problems we have? I also have used echolink from a smartphone a few times to access our 625 machine so that is worth continuing even if it has limits.

I am still debating investing in DSTAR in 2013, waiting to see if ICOM makes the ID51D affordable or tries to gouge that proprietary mode that seems to be finally catching on. 73 K0VH

Yes, as I travel around the country, I hear all kinds of things I'd like to see around here.

Many places have morning nets on VHF/UHF. The most effective ones involve groups of linked repeaters. I found one net that had repeaters from the St. Louis are, across the southern end of Illinois and into Indiana - about the same distance as from Winona to Albert Lea, I think. There were 5 or 6 repeaters linked that covered the region, and the net worked really well, with lots of regular checkins.

I've enjoyed the morning nets on the linked repeater network in New Mexico several times when passing through, and they have a huge one on Friday nights, with people from all over the state checking in - it's a great thing. If I lived in Albuquerque or southern Illinois, a two meter rig would be high entertainment.

I'm monitoring our DSTAR repeater, which is connected to a statewide network. I don't hear much on it, and I don't usually get any replies there. There are some folks who drop in on EchoLink occasionally, and we have visitors to the clinic who use Bob's IRLP link. But mostly, these are quiet, too.

With our Very Informal Net, I was hoping we could use EchoLink to connect with other groups around the state. There is a Minnesota reflector there, but I haven't been able to raise a soul or even contact the guy who runs it. EchoLink isn't ideal, but it's better than nothing.

Anyway, all I know is that it's not easy to find people who are interested enough in radio to go through the effort of getting a license. But it should be a lot easier to keep them once they are here!

Now, people get the Technician, buy an HT (I think selling HT's to newbies is like selling crack cocaine to babies) and soon find that there isn't any activity on 2 meters. If they live in a typical apartment like most young people, HF operation is a problem.

I seriously believe that we need to shift the focus from VHF to HF for our beginners, any way we can. But for those that will never be able to really do HF from home, we need a way to make VHF/UHF as interesting as possible, and find other ways to make HF available to them. It would be great if we could talk enough newbies into trying 2 meter SSB, and maybe we should make that a priority. Did anybody else see the cheapie cheapie all band, all mode receiver in the January QST? A double-sideband suppressed carrier rig is not that hard to build - you run an RF signal through a passive doubly balanced mixer and add audio.

Scott's idea of a remote HF station is a good one, too.

I have put a lot of thought into making HF affordable for newbies.

Part of it is perspective. It cost me around ~500 as a teenager to get an HF station and a dipole. Fast forward 35 years and the costs are not much different but lots of hams do not realize the hobby will cost more than $150. We need to help address this up front.

I think one long term solution is an inexpensive SDR that can mate with someone's laptop or pc as most hams and homes have a PC.

I have encouraged Icom to make an inexpensive beginner model but they are unable. Yaesu comes the closest with their FT 450. I think the used market is the best option and many of us can help guide on this. Radio City for example has a good collection of used gear as does the store in Kansas City - Associated Radio - and the store in Evansville - The Ham Station.

Antennas are a different issue. Dipoles work for 40/80 but a roof mounted small yagi is best for 10-20. N6BT makes an inexpensive model as does Hygain.

How can the club incentivize use of HF? Do some nets on Sunday night on 80 meters and do regular public service work on HF on some occasions. We also need a club station for HF that people can use for less intensive contests.

Best regards,

Scott Wright

Topic: 1353 Message: 1359

What the heck, I'm sitting here waiting for the Sunday net so I'll chime in.

The repeater usage is a real sore point for me. I too have heard the occasional drunks and crazies on the repeater. Some club members decided to run and hide. Others stayed around and eventually the crazies and drunks left. But in the mean time the group that ran either never came back or started up on a simplex freq. So now we have a rather large group operating on 144.440 instead of using a repeater. What really irks me is some well known club members primarily use the simpley freq. In my opinion, this hurts the club.

Oh yes, I too have been on the 144.440 but very few times. The point that hurts is some of the conversations are very informative and could be a great learning experience for others.The problem of course with simplex is range. Depending on who's talking they don't get out very far.

On the point of linking repeaters I don't like it (my personal opinion). We tried it once way back when and the other machine was interfering with or storm spotting activity which could become a dangerous situation. If the 82 was linked to other repaters I would probably not use it anymore. I do most of my talking on the 82, so that would mean I probably wouldn't be on the radio anymore.

I go to work around 6:00 am every morning. I without fail, I ID as I'm leaving the driveway. Occasionally I get a response from Don QGB, and have a short conversation as he is heading home and me to work. I also ID when I get off work around 3:00 pm. Vary rarely do I ever get a response. I normally ID every time I get into the car. One again very few response. When I hear someone else ID I try to respond if I know I'm going to by on the road for a couple of minutes. What's strange there is I know others are there, I hear them chunking the repeater.

How to fix it, I don't know. But I'm not giving up like many other s have.

John

May I offer my two cents worth by saying that it may not be the drinks and crazies that hurt the club. It may be the club itself could be causing its own problem that lead to the unpopularity if the repeaters, activity, or the hobby itself. Specifically the small-town mentality that may push people away. I speak from experience and haven't touched a radio since nor do I gave any equipment in my possession. Point being is that there may not need to be much finger pointing without first holding up a mirror.

Greetings all from Wisconsin. I've been watching this thread for the last couple of days and experience some of what you are talking about here in my neck of the woods in Wisconsin that I did when I was living amongst you all. Personally, I will offer the things that got me going and kept me going and broadening into more an more aspects of ham radio. It was you guys!!! Visits to your shacks, being able to use your equipment to operate in mentored contests like the VHF+ sprints and the 10 ghz contests and then expanding out to doing my own contesting. I enjoy contesting not for the sake of contesting, but the skill building which has dramatically improved my listening skills when I do ARES traffic in drills around here. Don't get me wrong, it is still nice to see my call in QST because I am one of the few people's that don't mind freezing my tail off in the portable category for the January VHF contest. Yes, a lot of the newbies live in apartments as did I. I was really blessed to have my Elmers teach me about making antennas for portable ops, batteries, solar, support systems to get my antennas up in the air by myself. This was what you all did for me. Now I am offering my station to anybody that wants to give VHF+ operating a whirl, or portable HF operating a go. no takers yet but I will keep trying. Thank you all for your encouragement and inspiration. I know they say life is too short for QRP but I always enjoy checking into my Sunday ARES nets from all over the county here on my HT. It's the challenge that keeps me interested. We deal with recruitment and retention issues here also. I hope you get something figured out, and then you can pass the idea here. Good luck all, maybe some of things that got me more excited like shack visits and using others equipment and mentoring will work for other... My 2 cents.

Greetings all from Wisconsin. I've been watching this thread for the last couple of days and experience some of what you are talking about here in my neck of the woods in Wisconsin that I did when I was living amongst you all. Personally, I will offer the things that got me going and kept me going and broadening into more an more aspects of ham radio. It was you guys!!! Visits to your shacks, being able to use your equipment to operate in mentored contests like the VHF+ sprints and the 10 ghz contests and then expanding out to doing my own contesting. I enjoy contesting not for the sake of contesting, but the skill building which has dramatically improved my listening skills when I do ARES traffic in drills around here. Don't get me wrong, it is still nice to see my call in QST because I am one of the few people's that don't mind freezing my tail off in the portable category for the January VHF contest. Yes, a lot of the newbies live in apartments as did
I. I was really blessed to have my Elmers teach me about making antennas for portable ops, batteries, solar, support systems to get my antennas up in the air by myself. This was what you all did for me. Now I am offering my station to anybody that wants to give VHF+ operating a whirl, or portable HF operating a go. no takers yet but I will keep trying. Thank you all for your encouragement and inspiration. I know they say life is too short for QRP but I always enjoy checking into my Sunday ARES nets from all over the county here on my HT. It's the challenge that keeps me interested. We deal with recruitment and retention issues here also. I hope you get something figured out, and then you can pass the idea here. Good luck all, maybe some of things that got me more excited like shack visits and using others equipment and mentoring will work for other... My 2 cents.

I found one net that had repeaters from the St. Louis are, across the southern end of Illinois and into Indiana - about the same distance as from Winona to Albert Lea, I think. There were 5 or 6 repeaters linked that covered the region, and the net worked really well, with lots of regular checkins.
> >
> > I've enjoyed the morning nets on the linked repeater network in New Mexico several times when passing through, and they have a huge one on Friday nights, with people from all over the state checking in - it's a great thing. From: Steve Wiebke
Topic: 460 Message: 1363

I feel we can turn this into a fun and ongoing activity. We need input from anyone that has a ham radio. What do you want to happen with the hobby to get involved. Here are some of my ideas.

A daily 5:00PM rag chew on the 146.820 repeater for everyone to talk about their day and what ever. A great drive home activity.

I am looking into linking via echolink, the handy ham Saturday morning ham gear sale/swap net from the twin cities to the 146.625 repeater.

Come to the all ham radio operators diner event at the American Legion post on Civic Center Drive and 1st AVE NW the last Friday of each month. Meeting people in person makes talking to them on the radio a lot easier. .See www.rarchams.org for details.

If you have anything to add, feel free. This is your hobby too;

I didn't mean to start a finger pointing contest here.

I don't believe that all repeaters should be linked, and if you're going to link them, it needs to be done right.

Actually, all four of our repeaters have good coverage, but none of them provide 100% HT coverage of Rochester. I have trouble working the .82 with a handheld from my house - I guess there's a hill in the way. The .82 is really our big local machine.

There are technical issues with the EchoLink implementation we have. If you retransmit the IDer from your repeater and a squelch tail, you will rapidly get banned from nets and conferences, which is really where all the fun is. There are ways to avoid this, and I don't know if our repeater controller can be set up to make it easier or not. If so, we might increase the utility of EchoLink substantially. I'd like to see us hooked up to the Twin Cities Swap and Shop on Saturday mornings, and probably the Handhams net and the DewDropIN reflector at different times of the day.

But overall, I think we just need to try to increase activity. The .82 machine is fine for most of us. Setting up a scanner for the local machines and perhaps the more local ones in the region shouldn't be that hard. I scan about 20 repeaters most of the time, and sometimes more. The machines in Faribault and Owatonna are pretty busy during the day. I'd also throw 146.52 into the scan list for the sake of visitors.

Bill, what does the repeater have to do to make it work for echolink?
I'd be willing to try to get it to work on the 625 machine. It's hardly
used anyway.

, "Bill" wrote:

The ideal solution is to hardwire an EchoLInk computer into the repeater, but another solution is to have the repeater put out a PL tone only when there is a signal on the input. Ideally, it should also be set up to only ID when there is no signal on the input or turn off the audio to EchoLink at ID time. The idea is to eliminate squelch tails and retransmitting the IDer over EchoLink. If we can do that, any of the VoIP modes should work great. Someone out there has a bridge program that bridges DSTAR to IRLP and EchoLink, too. Would it be fun to be able to talk to DSTAR on the .625, too?

If we can come up with a way to do that, it would be great. I'd be happy to call the people who sold us the repeater and ask if they have an easy way to do that. I can't imagine it's an unusual request. I could also ask on the Echolink discussion group if anybody has done it to that model repeater. We might have to modify the controller. Then, we have to get Steve to set his receiver up for tone access, so it drops when the carrier drops on the repeater input.

That also avoids problems with Windows memory leaks that will eventually require a reboot of the computer. Of course, we could use one of the aux relays on the repeater controller to cycle a computer on command, too, I guess. I think all we would have to do to hardwire a local computer would be to connect it like you would to any receiver, but using the COR line to switch EchoLink instead of the VOX. I've got three retired LAN servers sitting here and would be happy to donate one.

1367. Race communications

Yahoo group: rochester_hams
Date: 2012-12-23 18:19:06 UTC
From: Steve Wiebke
Topic: 1367 Message: 1367

Is there anyone interested in working with me at the John Beargrease dog sled race in Duluth for three days. I work the starting line North of Duluth and the first check point, NW of Two Harbors. It is a 12 to 14 hour test of communications, with travel, and food breaks in between. I will bring the radio equipment (portable mobile unit this year)

This is extreme public service communications with temperatures in the freezing to sub zero range. A test of the equipment and personal preparedness.

I will leave Saturday January 27th around noon, and arrive in Duluth to check into the motel for two nights. Usually Econolodge.

There is a communications premeeting/party Saturday evening, The race starts on Sunday early afternoon, We get on site parking at the starting line. The line takes several hours to clear the roster. We report the sled team numbers, the dog count, and start time. With two or more people we can tke breaks and support each other.

We have diner in Two Harbors around 5 and then head to Check point #1. We report the inbound and outbound times of the teams with, dog count and bib numbers to the on site NCS. We may work at this station until midnight to 3:00 AM Monday, depending on how the teams come and go from the check point.

We drive back to Duluth and crash at the motel until check out at 11:00 AM Moday, We have diner and travel home, arriving in Rochester late afternoon.

Reply via e-mail if you want more information or would like to go.
PS: Since I can not take anyone in my truck you will need to drive. We split the costs for gas, motel, etc. This is an experiance you will never see or feel at any other public event. Dogs and mushers working together.

One year a sled came into a check point during the night with out its musher. Emergency rescue operations where activated. After a short time they found the musher zippered inside the sled, passed out. The musher had severe frost bit on the trail. He sheltered himself from the weather inside the cargo hold of the sled, and let the dogs run. He later reported the sled tipped over several times, but they got him to safety. Try to do that with a snowmobile. He owes the dogs his life.

Dave KC0VIM has worked with me for years, but may not make it this year. I need to let the organizers know by January 1st if I will be there this year.

To expand a little on opportunities available, I am the net control coordinator for this event this year. I have a few hams on the list already but can certainly use more. I usually head up on Saturday to make the pre-race meeting and may need to head up a little earlier if there is some last minute net control setup. I usually head back on Tuesday afternoon but may delay until Wednesday depending on how well NCS is staffed. If you think you want to help at NCS let me know. Other interesting places to work that may or may not be staffed already are the mid-distance finish in Tofte. When I work that I stay at Blue Fin Bay and work the finish from 8-3 or so on Monday. Then I like to run up to the checkpoint on the gun flint and watch the mushers come in at night across the lakes. You might even see a wolf or moose while driving. Steve or I can get you in contact with the other coordinators as well. More info can be found at http://www.bgarc.org/ or http://www.beargrease.com/

1369. A Ham's Midwinter's Night Scene

Yahoo group: rochester_hams
Date: 2012-12-24 17:17:15 UTC
From: N2DUP@aol.com
Topic: 1369 Message: 1369

I wrote this back in perhaps 2001 or 2002 and read it at one of the club's holiday parties. I've lost it on my computer over the years, but thankfully, the Brainerd club has immortalized it on their website, hi hi. Happy holidays to all in Roch.

Enjoy. 73, Chuck Gysi, N2DUP | Aledo IL | scanning1.com

A Ham's Midwinter's Night Scene
- or -
'Twas the Flight Before Christmas

Written by Chuck Gysi, N2DUP with extreme apologies to Major Henry Livingston Jr. (1748-1828) (previously believed to be by Clement Clarke Moore)

'Twas the night before Christmas, when all through the shack
Not a radio was on -- anywhere on the rack;
The antennas were tuned by the op with care,
In hopes that DX soon would be there;

The harmonics were nestled all snug in their beds,
While visions of tropical isles danced in the op's head;
And mamma with her logging pen, and I in my call-sign cap,
Just settled in for contesting after a short nap,

When out on the lawn there arose such a clatter,
I sprang from the shack to see what was the matter.
Away to the antenna farm I flew like a flash,
It looked like a scene right from TV's "M*A*S*H."

The moon on the breast of the slick coating of ice
Gave the appearance of what didn't seem too nice,
When, what to my wondering ears should appear,
But the delightful sounds of DX, almost too near,

With a quick fix to the downed long wire,
I got back to the shack; but had a quagmire;
More rapid than pileups, the call signs came,
But the out-of-turn DXers called; much of the same;

"Now, second call district only, now third," the DX station called;
"How about Europe only; now South America," he apparently stalled.
To the top of the log, to the top of the pile,
Stations made it through the hash - with a flick of the dial.

Along the ladder line, the signals did fly,
When they met the inverted vee, they flew to the sky,
So up to the 20-meter band I tuned the dial,

Looking for DX and contesters to add to my log file.

And then, in a tweak, I heard the call -
The prefix didn't match any I've ever heard.
As my XYL scribbled the call in the log – NP0LE,
We knew right away who this matched to a T.

He said he was air mobile, and he signed slant V02
His voice seemed to indicate he was in a hurry, too;
A bundle of toys he said he had in his sack,
Including some called Icom and Kenwood – with a power pack.

His signal increased as we chatted away,
The distance was lessening, not to our dismay.
As we exchanged our 5-9s as the morning neared,
He said those words that we had feared.

It was time to shut down; turn off the amp,
Finishing logging and turn out the shack's lamp;
For soon in our town, a visitor would arrive,
And we were still too awake and alive.

We hurried out of the shack, flew up the stairs,
Headed straight to bed without any cares,
We knew the time was drawing quite near,
That some new toys would arrive – and we left him a beer.

On the scanner that sits right next to our bed,
"I'm entering RST's air space," we heard as he said;
It was time to fall asleep; think of the packages we would find,
But as I laid there, I couldn't get it out of my mind …

I needed his QSL card, the one for aero mobile,
I'm sure this op's card would be anything but dull.
And I heard as I started to drift into a daze,
"Good DX to all and to all Happy Holidays."

1372. REMINDER-Tue 8pm 10 meter net & discussion topic

Yahoo group: rochester_hams
Date: 2012-12-17 15:28:25 UTC
From: dcnaatz
Topic: 1332 Message: 1372

It's again my turn to be net control for the Tue Dec 18 8pm RARC 10 meter net on 28.325 upper side band. Last month we had a couple "non-regular" checkins turnout so I am optimistic we'll get some this month too. THIS IS A GREAT WAY TO GET on HF and practice some HF operating in this informal QRM-free RAGCHEW net! I've noticed comments on another active rochester_hams discussion topic that we need to offer more practice on HF ... we've been running this RARC 10m net for at least 5 years now and it's in the frequency band that even newly licensed (or never on HF) Technician class hams can operate using a 16ft wire dipole. This should work well for anyone within a 25 mile radius of Rochester to checkin, and if you are in this extended range send me an email at k0vh@... by Tuesday morning so I can turn my beam towards your station.

I am going to propose a topic from the January QST p 30 on Software Defined Radio. While that article covers building a specific SDR receiver for under $50, if anyone has some basic questions on "what is an SDR" or "why do I care" we can get into that during the net roundtable. Plus we'll entertain any questions about HF that newcomers might have. Propagation on 10m has not been great lately, but you never know, eg last week on the 10m contest I did not work anyone west of Texas, but yesterday I was working into CA & AZ with S9+20 signals w/o my amp on. It's a crazy band and worth giving a try. 73 de Dave K0VH

1373. Classes

Yahoo group: rochester_hams

Topic: 109 Message: 1373

Here is what I'm planning for tech classes this year:

Jan. 26th and Feb 2nd - 'traditional' two Saturday class
Tues and Thursday for two weeks starting April 25th - 4 night 4 hour sessions
July 27th and August 3rd - 'traditional' class
October 25th and Nov 2 (may change this one later)

Three of those would be traditional two Saturday classes. the one in April would be four 4 hour evenings, Tues and Thurs for two weeks. These classes are going to be close to the scheduled VE exam dates this year.

If there is enough interest, I might be able to d a General class later in the year.

Wow - I wonder which earhole I was looking out of when I picked those dates...

The starting date in April is April 23, not 25.

The starting date in October is the 26th...

I just sent out notices to all the prospects who've signed up on the club web page , but no responses yet. If you have prospects you can contact me directly, or have them call me (507-252-5852). I think I have one student so far for the January class, and I'd like to have at least three. I am doing the classes in my warm, cozy house where I can show off all my great toys.

If anyone out there needs or desires a refresher, you're invited as well.

I haven't picked a date for the General class yet, but I did pick up a new book at HRO in Denver so I am starting to get there. I need to see how much it's changed since the last time we did one.

1376. Flu Epidemic

Yahoo group: rochester_hams
Date: 2013-01-11 17:46:36 UTC
From: Bill
Topic: 1376 Message: 1376

Shortly after we picked our daughter up at the Denver airport last week, she said that she was getting a lot of weird text messages from friends asking if she was 'all right'. So, she called one of them, and found out that a very close friend of hers had just died! She was 23, and a new school teacher who was in good health as far as anyone knew.

She was supposed to meet my daughter and some other friends for New Year's Eve, but said that she wasn't feeling well, and might have to miss the party. She didn't respond to text messages on New Year's Day.

Apparently, she had gotten worse, and went to the Emergency Room on New Year's Eve. They diagnosed her as having the flu and sent her home. Her parents found her dead in her apartment on January 2nd.

My wife's been watching some stats someplace, and there have been at least 5 deaths from flu among young people already this year in Minnesota. The CDC is starting to take notice and they report 20 deaths of people under 18 nationwide - I think it's higher than that.

The point is: if you haven't had a flu shot, get one today. If you have loved ones who haven't had a flu shot, drag them by the hair if need be to the nearest Walgreens, Shopko, Wal Mart of medical facility of your choice and get them a shot. I'm hoping that the flu vaccine that's out there will stop or at least help with this strain of flu, but the odd thing is that it seems to be killing mostly young people.

In 1918, a flu epidemic struck that killed mostly young people. It ultimately killed as many as 50 million of them. Let us hope this is not anything like that.

Meanwhile, 10 and 12 meters are both booming!

Certain flus and other infections can cause Cytokine storms in younger people who have very strong immune systems, while people with more impaired immune systems don't develop this problem.

1378. More on 2 meter activity

Yahoo group: rochester_hams
Date: 2013-01-17 19:39:41 UTC
From: Bill
Topic: 1378 Message: 1378

Well, for a while there, we really had a big upswing in activity on 2 meters. I think we're still hearing more people than usual there. But we still have a ways to go.

I read today about the radio club in Waukesha, WI. On their repeater, they have 'designated responders' who take turns monitoring the local repeater and responding to callers. Could we set this up here?

My 11:30 informal net has kind of dribbled off, and it's probably my fault - my schedule has changed so that I'm often not around at that time now. I have been hearing more folks on for the commute hour.

Just a reminder - this weekend in s the VHF contest. I hope to be on from time to time this weekend.

1379. Wow! Replacement microphones

Yahoo group: rochester_hams
Date: 2013-01-24 19:17:43 UTC
From: Bill
Topic: 1379 Message: 1379

I just saw something that I thought I would share.
http://www.packetradio.com/catalog/index.php?main_page=product_info&cPath=18&products_id=1908

They have replacement microphones to fit almost anything, including the infamous Radio Shack HTX212 and 242.

Years ago, we had many people using the HTX radios on the local repeaters, and they started off with fairly weak audio. So, someone else started 'golden screwdrivering' them to turn up the mic gain and/or deviation. As a result, the mics sounded horrible. Then, they modified the mics, making the matter worse. And, Radio Shack stopped carrying replacements.

One fellow here sounded so bad, I gave him a spare Kenwood radio I had just to get that awful sound off the air. A week later, he was back with the horrible sounding thing - his 'mentor' had managed to blow up the Kenwood. Sigh...

But now, we have a source for replacements. I have an HTX212 sitting here, and I'm tempted to order a replacement just so I have it when needed.

From: dcnaatz
Topic: 1392 Message: 1392

A late reminder but hope to hear some of you tonight Tue Feb 19 8pm CT on 28.325mhz USB (upper side band) phone. I am net control and just got my March QST where I skimmed page 46 on an interesting 6 & 10m combo beam antenna as a possible technical topic for discussion. For those who may not have their QST, I propose those on the net discuss what we are or have used for 10m antennas along with pros & cons of each.

If you are not able to make the net this week, please make note of the time and frequency for next Tue Feb 26.

Hope to chat with you on the net soon! 73 K0VH Dave

1393. Nag, nag, nag

Yahoo group: rochester_hams
Date: 2013-02-28 21:32:57 UTC
From: Bill
Topic: 1393 Message: 1393

My wife was talking to me the other day while I was calling some DX on JT65. She then lectured me for not paying attention to her. "I heard every word you said, Dear". "OK, what did I say?" Well, I didn't say 'nag, nag, nag' but it was fairly close. I'm still in the doghouse over that one.

I don't mean to be a nag, but I wanted to ask those of you who are on this group to consider joining ARES if you are not currently signed up.

There are 106 local hams on this group. That's quite a few times the number of people we have signed up for ARES. Rob has had to drop a few guys who just haven't been heard from for quite a while, and the ranks are thinning out.

As District EC, I have to rely on Olmsted County to provide help with our neighboring counties that only have a handful of hams. And. we have some fairly big commitments here in Olmsted County and the City of Rochester. We owe Red Cross two 'Rapid Response' teams composed of at least two people per team. In the event of a disaster, Rochester Red Cross will likely be a command post for the region. Also meeting at the Red Cross Building, we have the Se MN VOAD Council - the group that hopes to direct non-governmental relief agencies. We are committed to provide communications for those groups, as well.

So, if you aren't an ARES member, please contact Rob, KC0FOW, and become one. If you can't find him, send me an email - K0RGR(AT)arrl.net , and I will forward them to him. If you don't live in Olmsted County, I can forward your information to the appropriate EC.

Thanks!
73 K0RGR

For those who don't do much HF work, there is a DX contest on this weekend. I understand that many DX stations are defying the sunspots, and managing to appear on even 10 meters today, so everybody with a 10 meter rig should be able to bag some distant countries. Yes, Techs that means you, too.

1396. March and April Club Meetings

Yahoo group: rochester_hams
Date: 2013-03-09 15:25:04 UTC
From: Bill
Topic: 1396 Message: 1396

This Tuesday night is the March RARC club meeting, 6:30 at the Heinz Center, Building A, room HA111. Our speaker this month is Robert, K0RDA, who is going to explain the Incident Command System, and it's relation to ham radio.

I'm looking for some help for the April meeting. The topic of that meeting is 'Radio Tuneup'. What we want to do is be sure that everyone's radios are up to par for SKYWARN, public service events, and general hamming. In order to do this, I'm looking for some equipment and some expertise:

1. SWR meters for VHF and UHF, and some people to help use them to check SWR on mobile antennas.

2. One or more frequency counters that are accurate up through the 440 MHz. band.

3. A radio test monitor or stable signal generator that we can use to check receive performance. The test monitor will also be used to check deviation if we can obtain one.

If you can help out with some gear, or be a volunteer radio checker, please email me, k0rgr(AT)arrl.net .

Thanks

Gang - Thanks for coming to our recent coordination meeting at our office this past Saturday. John and I appreciated your interest and feedback.

Here are a few of the web links we showed that might help you track the weather better:

Our home page - weather.gov/lacrosse
SKYWARN page - http://www.crh.noaa.gov/arx/?n=skywarn
Decision Support page - http://www.crh.noaa.gov/arx/?n=dss_em
Other reminders:

March 27th is Iowa tornado drill (10-11am)
April 18th is Minnesota/Wisconsin tornado drill (1-2pm)
Storm spotter training sessions are still going, including some webinars
SKYWARN Recognition Day each year is the first Saturday of December.
If you think the radar training would be helpful for your club, let me know.
If you would like to be included in our test group for the spotter activation testing, let me know.

Also, I neglected to mention this but net controllers for groups can register and sign up with NWSChat (https://nwschat.weather.gov/), which is an internal chat group we use with television media, some Emergency Management directors and NWS employees.

Again - Thanks for attending our meeting and a huge THANK YOU for all the help and support you give us every severe weather season. We couldn't do it without you.

1398. RARC Picnic/Auction Aug. 13th in Byron?

Yahoo group: rochester_hams
Date: 2013-03-26 17:31:36 UTC
From: Bill
Topic: 1398 Message: 1398

I'll bring this up as new business at the next meeting, but this year for our club picnic, I'm planning a potluck and a real live auction.

I've rented the Byron Event Center for 6-10 on the 13th. If the club decides not to do this, I guess I'm out the deposit, but I'll live. The whole cost is $200. That buys us the facility for the evening, and we can bring our own food, unlike many other venues. We will also be allowed to set up earlier if we want.

I'm open for input on how to handle this. I expect the club to charge a percentage of the sales to help cover the cost of the event, and refill our somewhat depleted coffers. I'm also hoping it draws in people who don't usually attend RARC meetings, and maybe we can guilt some of them into paying their dues.

Yes, Ground Round is a restaurant, and the one meal we've had there was very good. This is a chain that's been around a long time. When my wife and were first married, we'd meet friends at the Ground Round in Des Moines about once a week for dinner.

I will try to make it there for dinner on Monday night. I want to try to put together some 'recruitment' materials for ARES and ham radio before that, and have it at both the Rochester and Dodge County training sessions.

I just purchased the AV-680 Multi-Band PATRIOT Vertical Antenna from Hy-Gain (handles 6M-80M) and now I am looking for recommendations on the feed line. I know there are many varieties and types out there. It would probably be buried between the house and the antenna and would be at least 175' if not more. Comments and suggestions?

Thanks,
Dan KD0ORS

Rg-213 is a great choice. I think 9913 or LMR 400 would be overkill for a vertical.

I would agree that RG-213 would be a good choice. If you can find the kind that's designed for 'direct burial' (usually has the designator 'DB' on it) that would be best, and burying it is not a bad idea - just remember where it is so you don't dig it up. People sometimes run their coax through a buried pipe. If you do this, drill lots of weep holes in it, or water will condense and freeze in the line, damaging the cable. The DB coax doesn't need as much protection. But, DB coax is highly slimy on the inside - that makes it self sealing, but it's messy to work with.

LMR400DB would not be a bad choice, either, but it is overkill. If you were feeding an untuned vertical, like a 43' one, low loss coax is recommended due to the high SWR that will be present in some cases. I use LMR400DB for a run of about 150' on my 43' vertical.

Dan,

For an idea of losses involved take a look at the feedline loss calculator at http://www.arrg.us/pages/Loss-Calc.htm To reflect real world I'd assume a 2:1 SWR. Remember a 1dB loss is just barely noticeable by most humans.

You mentioned running the coax underground. This needs a discussion. Does coax need to be run through conduit to protect from water or critters? Does coax run underground need to be replaced more often than above ground? How do you protect coax from being squashed by freezing ground (or water/ice in the conduit)?

Dan

Niel raises good questions.

Practically speaking any good grade of 213 or 9913 can be buried and will last longer than you will. I have 1600 ft of coax buried plus more hardline. I surveyed a number of friends and no one has put their coax in PVC despite the reasons favoring it.

Good luck with the antenna and hobby.

Scott

From: Byron Cahill
Topic: 1409 Message: 1414

I'd recommend buryflex from Davis RF http://www.davisrf.com/buryflex.php It's designed for direct burial, low loss, and at 175 feet @ 50 Mhz would give you about a 2 db loss. (much better lower in frequency, 1.2 db loss at 10 MHz) I've dealt with the company many times, and is owned by a ham. It's not cheap, $0.89 per foot in the lengths you are talking about plus shipping. You can find other stuff out there, but because you are going to bury the cable, this is the stuff to use.
Your mileage may vary.
Pat W0BM
PS now if you could find some hardline at the right price, that would be better yet.

From: Bill
Topic: 1415 Message: 1415

I am not sure if I have anyone scheduled for my upcoming technician Class yet. I've had people tell me that they intend to, but so far, I only have one new person signed up on the club web page. http://rarchams.org/classes.htm

We put out flyers at the Olmsted and Dodge County SKYWARN sessions, and over 75 of them were taken. Still, no bites?

This time, I'm doing the class as four 4-hour sessions on Tuesday and Thursday nights from 6-10 at my house.

If you know any prospective hams, please let them know about this class!

Thanks

1417. Looking for an HT to borrow

Yahoo group: rochester_hams
Date: 2013-04-08 20:34:02 UTC
From: Brent Larson
Topic: 1417 Message: 1417

Didn't really want something like this to be my first communication to this group, but here goes anyway. I've been inactive in the hobby for a while and currently have no working equipment. I am volunteering to help with the hams supporting the Zumbro 100 ultramarathon race event this weekend near Thielman, and while I could do so without a radio, I would prefer to have one available. Not ready to buy one yet as I am not up-to-speed on the technology available, so am not sure just where to put my money down. I'm looking for a basic (2m) HT that anyone might have stashed away as a backup rig that they would be willing to loan me from Wednesday through Saturday. If nothing is available, I will still live, no biggy. Just thought I'd put out the call, just in case. Thanks. I look forward to re-engaging in the hobby more, now that the kids are out of the house.

Brent Larson
KE0UB
507-254-9238

PS. If you have recommendations on what features I should be looking for now, I'd also appreciate that input. Both for VHF/UHF as well as HF rigs. I used to love 15m when the solar cycles were hot.

I sent you a personal email asking what we could do to help get you on the air. That was a hint that I could loan you a radio. Email me and I'll tell you more.

As for VHF/UHF, for most things, a mobile unit that you can also take out of the car and use as a portable is often more useful than an HT.

There are some decent HTs out there from China for as little as $40. The Baofeng UV5R is not the world's greatest HT, but for the price, it's hard to beat, and Radio City up in Mounds View will sell you one for about $69 with a warranty. They also carry two other popular Chinese brands.

For very sightly more money, you can get the Yaesu FT-60, which is a proven combat veteran.

There are a couple APRS capable HTs with built in GPS units.

If you want all the goodies, you can easily pay up to $500 for an HT. If you want to get on the local DSTAR repeater, you will need a DSTAR capable HT. That's a lot easier than it used to be - The ICOM ID31A is under $300 with a built in GPS, but it is UHF only. If you want both the VHF repeaters in the area and the one and only DSTAR machine, the ID-51 is a shade over $600.

So, it all depends on what you want to do and how much you want to spend. If you want a cheap, fairly solid rig, or one that you won't have a fit over it it breaks or gets lost,

the Chinese radios fill the bill. If you want something better, the Japanese companies make them in all shapes, sizes, functions, flavors and prices.

For HF, there are at least as many choices. I just read about a new Chinese HF rig from wouxun.us (actually a US dealer) - 5 HF bands, 5 watts, SSB and CW - $299. That sounds like it might be worth a gamble.

Glad to hear you are getting active again. Your QTH should give you good HF propagation especially with a multi-band vertical like the cushcraft models.

We will have state of the art HF radios on display at Field day June 22-23 at Gamehaven Boy Scout camp. Ray Novak of Icom America will be there. I think Icom makes the most cutting edge HF stuff with new DSP technology. All the brands are fine frankly with regard to basic stuff but I like the quiet receivers of Icom.

You can learn more by watching ham nation at twit.tv/hn which is webcast and recorded weekly.

Kind regards,

Scott Wright K0MD

1423. Tonight's meeting

Yahoo group: rochester_hams
Date: 2013-04-09 15:12:32 UTC
From: Bill
Topic: 1423 Message: 1423

Well, the plan was to check out radios tonight, but the weather looks like it's going to make checking mobiles a bit dicey at best. NWS forecasts 100% chance of rain at meeting time, so I guess we'll move things indoors. We can check out HT's there, and I will try to plan something else for a quick presentation tonight. Mel was also going to talk about the 'cheap yagi'.

Thanks to all for the information. I decided to pick up the LMR400 line since it wasn't really all that much more to pickup the better stuff anyway (overkill or not). I do plan to have this 5' above my garage roof which is 12' tall. It will be connected to a 20' 2" steel water pipe with 1' in the ground and guy wired. The pipe will be grounded at the base to a grounding rod also. The feedline will be grounded by the garage and will then be grounded before coming into the house with Alpha Delta ATT3G50 Surge Protectors on separate grounding rods from the antenna. (The antenna will be the tallest thing except a couple houses in the area and didnt want to take any chances being up on the hills).

Atm, I am just going to trench and bury the cable, but may re-look at the situation later in the year.

Any thoughts or other suggestions, please?

Thanks
Dan

> I just purchased the AV-680 Multi-Band PATRIOT Vertical Antenna from Hy-Gain (handles 6M-80M) and now I am looking for recommendations on the feed line. I know there are many varieties and types out there. It would probably be buried between the house and the antenna and would be at least 175' if not more. Comments and suggestions?

1426. CQ the Rochester SE MN 10 meter net Tues 8pm

Yahoo group: rochester_hams
Date: 2013-04-15 22:20:11 UTC
From: dcnaatz
Topic: 1426 Message: 1426

I'll be calling for the Tues Apr 16 8pm 10 meter net on 28.325 upper side band phone/voice. Two topics at hand:

1. We had an anniversary of this net a couple months back. At least my log entries show this net starting around Feb 2007, so just over 6 years ago! I'd like Dick WA4EJJ who was one of the early drivers of the net to confirm this but my log shows:
N0MGY, KB0SPM, N0NUV, KD0BQ(AI0M), W0STV, AB0BW, WA4EJJ, K0RGR, W0TAX, K0MD, KC0TST, KC0TNL, K0RPD, KD0AMG, K4IU
all as checkins the first few months ... come on back to you and all new comers to this informal net!

2. Thursday April 18 is World Amateur Radio day and the 100th year anniversary of hams helping in emergency communications. While this net is not run as an official ARES net, are you setup for at least basic emergency power communications (I got thinking of this during our Ice Storm warning last Friday ... we got off lucky but Worthington, Sioux Falls and Appleton did not).

Also good news - 10m was open to EU & the middle east last week ... but when the CME hit earth on Sat all that changed.

1427. ARES at the Boston Marathon

Yahoo group: rochester_hams
Date: 2013-04-17 02:26:28 UTC
From: john_nz0s
Topic: 1427 Message: 1427

200+ ARES were working the marathon, NONE were hurt. Sounds like they kept they're cool and did they're job.

1428. Rookie Roundup - SSB contest Sunday

Yahoo group: rochester_hams
Date: 2013-04-19 14:25:24 UTC
From: Bill
Topic: 1428 Message: 1428

This Sunday is the annual SSB Rookie Roundup contest. This is a special contest for new hams. The contest will run from 1 p.m. to 7 p.m. - you can find the rules here: http://www.arrl.org/files/file/Contest%20Rules%20PDFs/2013/2013-RookieRoundup-Rules.pdf

In order to qualify as a 'Rookie', you must have been first licensed in 2011, 2012, or 2013.

If there is interest on the part of some Rookies, I'd be willing to host a multiop station. The contest is on HF, but Rookies can operate on the recommended frequencies with a higher class licensee as control operator. Please let me know if you want to try out this contest.

1429. Housewarming Party (4/20)

Yahoo group: rochester_hams

From: Daniel N0KZO
Topic: 1429 Message: 1429

Just a heads up for those I don't have on Facebook, Elise (W0CAY) and I will be having a Housewarming/Wedding Reception Party tomorrow at our new home in NW Rochester. Our address is 3859 Winesap Dr. Nw. We are just of 65th St and Freedom Dr. It will start around 12pm and go until the last people leave or we die from exhaustion, but all are invited with no RSVP's needed. We will have the grill on with brats, dogs and burgers going with other things to eat and drink also. I know that a couple of you are planning on comming out, but forgot to post here to invite the entire group also.

I am hoping it will also be an antenna raising party as I am eager to get that HF antenna up and hooked up. I am pretty sure I have 90% of the stuff I will need (good thing Menards or Home Depot are close).

(And just an fyi, our calls just changed today. Elise was KD0SGZ and is now W0CAY and mine was KD0ORS and is now N0KZO.)

Hope to see some of you there and if not, hope to speak to some of you on HF real soon!

1431. Ideas from SKYWARN in Steele County

Yahoo group: rochester_hams
Date: 2013-05-03 16:12:11 UTC
From: Bill
Topic: 1431 Message: 1431

I don't normally have anything to do with SKYWARN other than as a volunteer. ARES and SKYWARN are two separate things, but there is an MOU that says that ARES will support SKYWARN. But when we recently met with the Emergency Manager in Dodge County, we asked what we could do for him, and his first request was for help from SKYWARN in protecting the cities in his county. Since the Dodge ARES group is so tiny, I went to a meeting of the Owatonna SKYWARN group to ask if they could help cover the westernmost cities in Dodge County, and they agreed to do so.

While I was there, I learned a few things we might want to investigate.

First, they have regular meetings for the SKYWARN team beyond the training classes. We do something similar here with the after-action Monday night nets, but they have incorporated non-hams into their group. Most of those non-hams eventually get licensed. When they teach classes, they do the SKYWARN, ham radio Technician, and CERT classes back to back to back. They teach their own SKYWARN classes, too, so they can do it multiple times each year.

They also have a waiver that parents can sign to allow their children under 18 to participate - usually as a 'ride along' with Mom or Dad.

A couple of the ham groups in counties out there have an annual 'program the weather radios' event, where they program or check the programming of people's WX radios. It looks like these typically involve a local retailer who sells the radios. In a typical year, they do about 300 radios, and they are sending volunteers to local schools and rest homes to check their radios, too. Sounds like good publicity.

I like some of these ideas especially about school businesses and other places that use weather radios and also see what they have in place for severe weather plans.Also we we can educate people about FRS/GMRS for local neiborhood watch and weather.

From: Steve Wiebke
Topic: 1435 Message: 1435

I am in charge of the Chester Woods Park run. This is next Saturday. I need three more people to help with the race. The event can be worked with an HT and most locations can be driven to.

It starts at 8:00 AM June 1st. Please be at the park around 7:00 AM. If you are not a park member tell them you are with communications for the event to not have to pay. The 147.255 PL 100 repeater will by used.

Go to the www.rarchams.org web site. Under public service please sign up for Chester Woods trail run. There is plenty of free hot food and we are done around noon. I need a NCS operator to take traffic since K0RDR is gone. This is a very easy event. Dress for the weather if needed. 73

1438. HTX- 242 Replacement Mic

Yahoo group: rochester_hams
Date: 2013-06-03 15:25:36 UTC
From: Bill
Topic: 1438 Message: 1438

I've had an old Radio Shack HTX-242 kicking around a long time. For a while, it was the Echolink gateway. I recently decided to resurrect it for use as a mobile in my rustbucket vehicle that I want to use for SKYWARN. I hooked it up the other day and was informed that it sounded pretty awful.

So, I ordered a 'MICSPARE' mic from BUXCOMM: http://www.packetradio.com/catalog/index.php?main_page=product_info&cPath=18&products_id=1908&zenid=4ridjk1gqufqagt3k0ld7p0mn1

They have replacement mikes for a whole variety of modern rigs. The mic is simple - nothing but PTT on it - but it seems to be of good quality.
On-air reports are that it might be a little 'tinny', but definitely better than the stock mic.

So, if you have an old RS radio laying around with bad audio, the MICSPARE for 'Radio Shack with RJ45 connector' should do the trick. They seem to have a model for most manufacturer's rigs.

1439. Field day

1447. RARC Field Day Schedule of Events

Yahoo group: rochester_hams
Date: 2013-06-19 16:28:47 UTC
From: Grant Kesselring
Topic: 1447 Message: 1447

Hi Everyone,

Well, Field Day is right around the corner and things are coming together. Please plan on coming out to join us at Gamehaven for an impressive display of amateur radio in action! Here is a schedule of events for this weekend. For more information, please visit our RARC website at: www.rarchams.org

EVENTS: RARC FIELD DAY
* Friday, 1pm-8pm: Antenna Setup. Too few people put up too many antennas.
* Saturday, 9am-1pm: Station Setup. Bad time to visit. Nothing works right and everyone is cranky.
* Saturday 1pm: Sunday 1pm: Field Day operating. CQ FD CQ FD.... So much RF that the mosquitos are wiped out. Smoke from the rigs.... Fire in the generator. Are we having fun yet?
* Saturday 6-9pm: Dinner. Pulled pork sandwiches and potluck.

* Sunday 7-9am: Breakfast

* Sunday 1pm-5pm: Tear Down. See how fast hams can run from a falling tower! We need help!

73,
Grant K1KD

1448. Re: [rochester_hams] Satellite AO-50 passes

Yahoo group: rochester_hams

From: Kevin Adler
Topic: 1442 Message: 1448

FYI, there is software to track the satellites. Even when not using computer controlled rotator controls, it might be useful to you: http://gpredict.oz9aec.net/

I'm sure there's other software, but that is what I've used in the past.

Steve,
I hope you can bring the tower trailer out as we need it’s length to transport the many antennas stored out here. I will be home Friday, and can help load the antennas. give me a call on my cell tomorrow.
THanks, Pat

Steve,
    I hope you can bring the tower trailer out as we need it’s length to transport the many antennas stored out here. I will be home Friday, and can help load the antennas. give me a call on my cell tomorrow.
THanks, Pat

Hi folks! Well, we are plugging away out here at Field Day. Attached is our qso totals just now. We had a great pork sandwich dinner earlier. Also, despite our best efforts, no one has been electrocuted putting up antennas (though Kevin, Paul and I had a couple of close calls)

1459. Field Day 2013: Wrap-up

Yahoo group: rochester_hams
Date: 2013-06-24 18:27:36 UTC
From: Grant Kesselring
Topic: 1459 Message: 1459

Hi everyone,
A special thank you to everyone who participated in Field Day this year! Again, we have shown what a great job RARC is capable of doing when we pull together! I would like to acknowledge and give thanks to everyone who helped plan, donated items, delivered equipment, prepared meals, arranged bonus activities, interfaced with Gamehaven, operated, setup, tore down, and participated in all other ways. It has been a pleasure working with you all this year!

That being said, we had another very good showing. My very preliminary log analysis says we made roughly 1256 SSB, 1607 CW, 10 DIG, 100+ vhf, and some on Gota (I don't have all the numbers yet). All logs combined, I'm guessing we made close to 3000 contacts which would be our second highest qso total ever. Over the next few days we will be tallying up our bonus points to get our claimed score figured. All this was accomplished despite very challenging weather conditions throughout the weekend. We saw almost everything: extreme heat, humidity, torrential rains, thunder storms, wild horses, and mud everywhere. We took it all in stride and dealt with whatever was thrown at us.

Over the next few days as we get rested and have time to reflect, please send me your feedback on how things went. List the things that you thought went well, and the things that could be improved next time around. If we can jot down a list now while things are fresh in our minds, we will likely be able to make arrangements for improvement a year from now when we do it all over again.

So, thanks and.... get some rest!

73,
Grant

Field Day 2013

1460. Field Day 2013: Lessons Learned

Yahoo group: rochester_hams
Date: 2013-06-24 19:09:27 UTC
From: Grant Kesselring
Topic: 1460 Message: 1460

Here is some stuff I thought of... probably more to follow as more feedback comes in from others...

Went well:
- Army masts
- W0STV tower was easier than the Rohn Tower
- Shelters.

- CW2 shelter mosquito netting
- Mess hall building

Potential Improvements:
- CW2 tower could only deploy to 30ft. It was reported that it became too difficult to crank beyond. Need better cranking mechanism.

- CW2 fan dipole was shorted to tower. Needs a standoff.
- CW1 rotor cable was bad. End connectors were bad and wiring splicing was required. Soldering rotor cable on Saturday morning of Field Day is the wrong time to have to do this job!
- Break out tower raising job into "teams". Have three tower team captains that can lead each team so we can do more put up in parallel.
- Tower guy anchors were a major pain due to the rocks around the mess building. Not sure what action to take about this. It may be something we just have to deal with.

- Make sure all laptops are set with the correct time.
- We made zero 75m phone contacts. Why? Was the antenna not performing? Couldn't tune? Band conditions bad?

- After staring at our logs, we historically make the lions share of contacts on 15, 20, and 40m bands. This year the SSB station made 85% of its contacts on 20m alone. Across all the stations, we made only 3% of contacts on 80m. Wow! Clearly, we have a geographic advantage on 20/40m from the midwest. Is our low count on 10m and 80m because of propagation/geography or relatively poor antennas?

73,
Grant

From: Scott Wright, K0MD
Topic: 1460 Message: 1462

Great analysis

Let me add my thoughts which I admit are long:

Went well:
1. A ton of good operators and too few daytime slots for those who wanted daytime slots!
2. The best rigs we have ever had
3. Great rig to computer interfaces - SSB-1 took 5 minutes to set up and CW-2 took the same. CW-1 took about 5 days for Grant to interface but that was likely due to a faulty cable.
4. Antennas performed well on SSB-1
5. 1100 plus 20 meter phone contacts.
!! One could argue time spent on the other bands cost us 200 QSO's.
there is no advantage for working multiple bands so no penalty if the SSB station stayed on 20 all the time.
6. Shelter building was a nice spot for radios. You could put all three in there and just separate the antennas by running coax.
7. Icom DSP a real advantage.
8. 150 watts a boost.
9. Networking cool but not essential.
10. Rotors nice but we can do FD without them as W3AO prohibits the use of rotors to keep one station from causing another interference.
11. CW-1 had a forty meter vertical dipole and a wire antenna. Would be nice for SSB-1 to have both.
12. Forget 80 meter antenna for SSB -1 as this year demonstrated a single SSB station only needs 40 plus a tribander.
13. Great influx of hams from outside RARC to help operate.
14. Lots of non-operating hams who did set up and food. I was very impressed at participation of hams who do not usually do HF.
15. Two trailers were perfect.
16. Army masts are great.
17. W0Bm crank up tower much safer than old Rohn system we leaned up. He and Steve will figure out how to crank it up more. Perhaps a drill?

Areas to improve:
1. Better propagation and weather.
2. Better coax as I found the SSB rig with a loose coax connector from the yagi Sunday morning at 6 AM. Who knows how long we had run it with an intermittent short since the coax was not screwed into the antenna connector properly.
3. Not enough help for take down Sunday. I like the suggestion of tower teams. I think overall FD leadership would be enhanced by having two assistant directors for Grant- one who is in charge of tower installation and antenna erection and a second in charge of rig set up.
4. Less than complete communication about details of what each captain needed to bring. Could be solved with a check-list for each station that is updated yearly.
5. Boy Scout camp crowded with other adult events. Consider moving location to Pat's next

year and doing 2-a.
6. Bathrooms a long walk for main hall area.
7. 2 ele yagi for GOTA on 20 or 15 meters to help with contacts. Consider RTTY for GOTA since kids like computers?
8. One CW-2 op suggested that conversations within the trailer were very distracting to him trying to copy weak CW signals so perhaps we should have a quiet zone around each rig to help the operators concentrate?
9. More operators interested in night shifts.

All in all a great effort. The club can be proud of doing a 3-a station with 3000 contacts.

Can we see a QSO total by each station?

Congratulations to all again for a great FD effort.

SB QST @ ARL $ARLB015
ARLB015 Rules Change Sought to Permit Encryption of Sensitive
Emergency Communications

ZCZC AG15
QST de W1AW
ARRL Bulletin 15 ARLB015
From ARRL Headquarters
Newington CT June 25, 2013
To all radio amateurs

SB QST ARL ARLB015
ARLB015 Rules Change Sought to Permit Encryption of Sensitive
Emergency Communications

The FCC is inviting public comments on a proposal from a
Massachusetts ham to amend the Part 97 Amateur Service rules to
permit the encryption of certain amateur communications during
emergency operations or related training exercises. On June 7 the
FCC accepted for filing a Petition for Rulemaking (RM-11699) from
Don Rolph, AB1PH, and put it on public notice. It will remain open
for comment until July 8. The petition for rulemaking can be found
online at http://apps.fcc.gov/ecfs/document/view?id=7022424684.

Rolph, of E Walpole, petitioned the Commission in March to suggest
an additional exception to Part 97.113, which currently prohibits
"messages encoded for the purpose of obscuring their meaning."

"As such, encryption cannot be effectively supported by the Amateur
Service," Rolph told the FCC in his PRM, "and this restriction has
impacted the relationship of Amateur Radio volunteers and served
agencies and significantly limited the effectiveness of amateurs in

supporting emergency communications." He pointed out that Part 97 already relaxes its encryption prohibitions with respect to satellite control link communications and model craft radio control.

Rolph cited rules already in place in Australia as a possible model for amending the rules in the US. The Australian Amateur Radio rules provide an exception for "intercommunications when participating in emergency services operations or related training exercises." He suggested modifying Part 97 "to capture the intent of the Australian regulations" to relieve what he called "this impediment of Amateur Radio support of emergency communications."

In his petition Rolph suggested excepting "intercommunications when participating in emergency services operations or related training exercises which may involve information covered by HIPAA or other sensitive data, such as logistical information concerning medical supplies, personnel movement, other relief supplies or any other data designated by Federal authorities managing relief or training efforts."

Commenters may use the FCC's Electronic Comment Filing System (ECFS) to comment on RM-11699 online at http://apps.fcc.gov/ecfs/upload/display?z=okdw6.

Was there SWR testing on the stations before transmitting?
Seems people where moving around individually during set up. We need a set-up foreman.
A tool kit in the trailer that goes with the set up crew. They sign it out.
An itemized list of what is in the black trailer. Get rid of, or fix items we could not use. Black trailer had items just thrown in. No organization. Still that way when I looked in.
Post the name of the operator at each station when they are on the air. I had no idea who they where or where from.

The crank up tower is being fitted with a permanent stand off, with pulley and none metallic support.

The crank up problem is being fixed soon.

Steve,
Yes, to the extent that we had time. The CW1 and SSB station beams got SWR testing before they went on the masts Friday night. The CW2 station beam was in the air before I had a chance to make it there. The club does not own a portable SWR meter that I'm aware. The one I was using was borrowed from the IBM club. Peter W0SA also had an analyzer which he used to check his vertical dipole. Ideally, we would want each station to have its own portable antenna analyzer so one guy (me, in this case) doesn't have to run from one site to the other using a single analyzer.

I agree that we really need a tower foreman at every site that is knowledgeable about all aspects of that station. They must know how to erect the mast, put together the beam, mount the rotor and beam, hook up the rotor cable, run coax properly, install low band antennas, run open wire line. A group of 4-6 people must also be present to help the foreman.

Each station should also have a station captain. This person is responsible for all aspects of the operating area: radio, laptop w/logging software, tuner, interface, keyer, coax jumpers, headphones, table, chair, etc. I think it could be the same person as the tower foreman, but ideally they would be two separate jobs. The station captain should come to Field Day Saturday morning with radio interfaces already debugged and verified. The station captain should take the first operating shift on Saturday afternoon to make sure the station is operating properly. He/she is usually the owner of the radio being used but doesn't have to be.

Really, what it feels like we need is a Field Day "field manual" that describes exactly how we will construct each station. The document will describe the various tasks throughout the weekend and who will do them. I would be willing to help craft such a document if there were others interested.

Excellent suggestion on organizing the black trailer contents. Bob AB0BW and I attempted to do this last year. I made an inventory list which I still have. Tell me where I can post it and I will share with the group. Trouble with the black trailer is that it gets loaded up every year at the end of Field Day when everyone is tired and just wants to get out of there. Many of the folks that tore down had also operated overnight with very little sleep. So things tend to just get thrown in there. We really need to set a date when we can get back into the trailer (after resting up!) and do a good job getting it organized.

73,
Grant

Was there SWR testing on the stations before transmitting?
Seems people where moving around individually during set up. We need a set-up foreman.
A tool kit in the trailer that goes with the set up crew. They sign it out.
An itemized list of what is in the black trailer. Get rid of, or fix items we could not use. Black trailer had items just thrown in. No organization. Still that way when I looked in.
Post the name of the operator at each station when they are on the air. I had no idea who they where or where from.

The crank up tower is being fitted with a permanent stand off, with pulley and none metallic support.

The crank up problem is being fixed soon.

Grant, the club does havea portable SWR meter. I currently have but normally Rob, the Tech Comm chair has it. So, if we all can remember next year we can make sure it's onsite.

Another good event.

Hi Grant et al, I am missing an aluminum lawn chair with pvc woven webbing,
says MEL
on the bottom, light blue & maybe yellow pattern on webbing. Last seen
at breakfast,
before the horses arrived in mass.

Steve,
Yes, to the extent that we had time. The CW1 and SSB station beams got SWR testing before they went on the masts Friday night. The CW2 station beam was in the air before I had a chance to make it there. The club does not own a portable SWR meter that I'm aware. The one I was using was borrowed from the IBM club. Peter W0SA also had an analyzer which he used to check his vertical dipole. Ideally, we would want each station to have its own portable antenna analyzer so one guy (me, in this case) doesn't have to run from one site to the other using a single analyzer.

I agree that we really need a tower foreman at every site that is knowledgeable about all aspects of that station. They must know how to erect the mast, put together the beam, mount the rotor and beam, hook up the rotor cable, run coax properly, install low band antennas, run open wire line. A group of 4-6 people must also be present to help the foreman.

Each station should also have a station captain. This person is responsible for all aspects of the operating area: radio, laptop w/logging software, tuner, interface, keyer, coax jumpers, headphones, table, chair, etc. I think it could be the same person as the tower foreman, but ideally they would be two separate jobs. The station captain should come to Field Day Saturday morning with radio interfaces already debugged and verified. The station captain should take the first operating shift on Saturday afternoon to make sure the station is operating properly. He/she is usually the owner of the radio being used but doesn't have to be.

Really, what it feels like we need is a Field Day "field manual" that describes exactly how we will construct each station. The document will describe the various tasks throughout the weekend and who will do them. I would be willing to help craft such a document if there were others interested.

Excellent suggestion on organizing the black trailer contents. Bob AB0BW and I attempted to do this last year. I made an inventory list which I still have. Tell me where I can post it and I will share with the group. Trouble with the black trailer is that it gets loaded up every year at the end of Field Day when everyone is tired and just wants to get

out of there. Many of the folks that tore down had also operated overnight with very little sleep. So things tend to just get thrown in there. We really need to set a date when we can get back into the trailer (after resting up!) and do a good job getting it organized.

73,
Grant

The station captain should come to Field Day Saturday morning with radio interfaces already debugged and verified. The station captain should take the first operating shift on Saturday afternoon to make sure the station is operating properly. He/she is usually the owner of the radio being used but doesn't have to be.

Really, what it feels like we need is a Field Day "field manual" that describes exactly how we will construct each station. The document will describe the various tasks throughout the weekend and who will do them. I would be willing to help craft such a document if there were others interested.

Excellent suggestion on organizing the black trailer contents. Bob AB0BW and I attempted to do this last year. I made an inventory list which I still have. Tell me where I can post it and I will share with the group. Trouble with the black trailer is that it gets loaded up every year at the end of Field Day when everyone is tired and just wants to get out of there. Many of the folks that tore down had also operated overnight with very little sleep. So things tend to just get thrown in there. We really need to set a date when we can get back into the trailer (after resting up!) and do a good job getting it organized.
73,
Grant

Was there SWR testing on the stations before transmitting?
Seems people where moving around individually during set up. We need a set-up foreman.
A tool kit in the trailer that goes with the set up crew. They sign it out.
An itemized list of what is in the black trailer. Get rid of, or fix items we could not use. Black trailer had items just thrown in. No organization. Still that way when I looked in.
Post the name of the operator at each station when they are on the air. I had no idea who they where or where from.

The crank up tower is being fitted with a permanent stand off, with pulley and none metallic support.

The crank up problem is being fixed soon.

1480. Multiple Subjects

Yahoo group: rochester_hams
Date: 2013-07-07 19:00:11 UTC
From: Bill
Topic: 1480 Message: 1480

I don't want to get too long winded, but I have several items to announce.

First and foremost, our August meeting will be a potluck and auction, at the Byron Event Center on Highway 14. I plan to open the doors between 5:30 and 6:00 for people to bring in their auction items. We will have some items that have been donated to the club, so the proceeds of those will go to RARC. Individuals who have 'surplus' RADIO items are welcome to bring them to sell on the auction as well - RARC will keep 10% of the proceeds of the sale.

I need to verify, but I don't think hot food is in the cards for this location, but we are allowed to bring in our own food. So I am thinking a couple big plates of cold cuts and sandwich fixings, and everybody please bring an item to share.

Item two, my mission this month is to create a new organization in the region for the purpose of getting a new UHF repeater in Dodge County, specifically on the 330' ARMER tower near Dodge Center. I've done some models, and from that tower, the repeater should provide mobile coverage from the outskirts of Winona to the outskirts of Mankato, and from Mason City to the south side of the Twin Cities. The purpose for the repeater is SKYWARN/ARES, but you know that I believe that a ham repeater needs to be used daily and as much as possible to ensure that it works.

At this point, I am just taking names of those who want to be members of the organization. This group is separate from all others, and in addition to them, not in competition with them. It is my hope that we can get some financial support from the radio clubs in the area, as well, but that will all be decided later when we learn how much this venture will cost. Based on recent repeater follies around here, I expect it to cost in the region of $10,000. I've also heard hints of some other potential donors and have pledges of support from some people involved with the tower.

So, if you want in on 'ground floor' of this project, send me an email and I will add you to the group.

Third item, our speaker for the July meeting is Erik, NY9D, talking about the incredible DSTAR network in the Twin Cities area, that I hope we will eventually see extended down here. Erik can also talk to the 145.67 packet network.

Fourth item - I am the guest speaker in September. At the beginning of the year, we asked for ideas for programs, and it was suggested that we have one titled "OK, I have the license, Now What?". My goal is to present some ideas for things that newcomers can do, but I also intend to touch on new things that people who were licensed in the Jurassic era, like me, might not be familiar with.

Fifth item - I got a volunteer for the October meeting yesterday driving over from Highway 71 on I-90. I was on the Mankato UHF repeater, and talking to the Blue Earth County EC, Steve, WA2OFZ. Seve and the ARES/SKYWARN group over there has an extensive of repeaters and remote bases that allow them to do all kinds of things depending on the activity, and he will be here to tell us all about it.

I'm still looking for a victim/presenter for November, so if you have any ideas, I am very interested!

This may be taken care of but, to be sure I will make this announcement.
To any past RARC officers that are not holding a current club postion, please go to an US Bank office and have your self removed from the RARC account. We can not add our new treasurer until all current account signatures approve, and sign off that he can be added to the account. As it stands I am the only current club officer that can sign checks.

I propose that we have only have the club treasurer and secretary on the signature card in the future

1483. Field Day Results 2013

Yahoo group: rochester_hams
Date: 2013-07-15 19:41:18 UTC
From: Grant Kesselring
Topic: 1483 Message: 1483

Hi Folks,
A number of people have been asking how we did at Field Day this year. I sent an email to the officers and some on the FD committee, but I wanted to make sure you all had a chance to see the raw numbers. I apologize for the delay sending out our claimed score, but I spent the better part of a week merging and scrubbing the logs. Then, I've been out on family vacation for the past week where we had limited internet. Anyway, here is the claimed score that I submitted on behalf of RARC.

Some fun facts:

Our best hourly rate on CW (combined) was 131/hr at 18z by K4IU and K1KD.
Our second best hourly rate on CW (combined) was 117/hr at 20z by NY0V and KB0EO.

Our best hourly rate on SSB was 118/hr at 18z by K0MD.
Our second best hourly rate on SSB was 106/hr at 20z by N9JA.

85% of all SSB contacts were made on 20m. No contacts were made on 80m.
93% of all CW contacts were made on 15m - 40m.

For reference, here was our qso totals from 2012:
SSB - 1328
CW/DIG - 1722

VHF - 60-ish

Gota - 168

You will recall that last year was a higher water mark year for score. We had high qso totals and large bonus points due in part to high gota qso generation. This year our combined qso output by the three main HF stations was down about 200 q's. The thunderstorms that were constantly rolling through the area certainly didn't help things. A few storms were severe enough to suspend operations a few hours which no doubt impacted our score. VHF contact totals were up due in large part to Mel's relentless pursuit of "parking lot" qso's! As mentioned earlier, the gota output was way down (140 q's more last year than this year). I don't think this is a reflection on anyone's efforts as much as it was just poor luck that Field Day weekend fell on the same weekend as another public service event (Rochesterfest Triathon). Lots of folks who might have stayed to make gota contacts had other duties elsewhere. We claimed almost all other available bonus points, lacking only some for message handling and the 100 pts for a satellite contact. Few clubs got the satellite bonus due to lack of satellites this year.

All in all, it was another great performance by an awesome club! Great job everyone!

73,
Grant K1KD

1484. CQ the Rochester 10m Tues 8pm net

Yahoo group: rochester_hams
Date: 2013-07-15 19:47:39 UTC
From: dcnaatz
Topic: 1484 Message: 1484

Contrary to popular belief, the Rochester 10m net is STILL OPERATIONAL!
Please join us Tuesday July 16 at 8pm CDT on 28.325 upper side band for this informal net. For a topic this week let's discuss our summer sporadic E (E skip) propagation which is going strong as I type this. I just worked S9 into Georgia and also worked Maine this past weekend.
I am listening to a large group of FL stations working K2BSA at the Boy Scout convention on 28.388 (I can't hear K2BSA but the FL stations are all coming in strong). On Field Day we worked over 70 stations in an hour Saturday evening from FL to NH via E skip. Who have you worked lately on 10m? Perhaps we'll even have someone check in to the net via that propagation more.

It's possible since I am coming from another meeting I may be a few minutes late on Tuesday so whoever happens to be on the net put out a call at 8pm and start talking. Again, this is an informal ragchew net. 73 Dave K0VH

1485. Local ham loses son...

From: Kevin Adler
Topic: 1460 Message: 1486

Sorry if this is quite late, but I had forgotten about it in my drafts.

Good things:
- Mess hall building great for SSB
- Very nice radios, fun to try out the "latest and greatest" (though overkill and not really necessary to have)
- Very good operation, despite weather
- Great food
- Contrary to what Scott said, I thought teardown went very well on Sunday. I left by 3 and everything was basically done at that point. On the other hand, I was there from 1-6pm Friday and helped setup from 9am-1pm Saturday. That's 9 hours setup, 3-4 hours teardown.

Room for Improvement:

- Wireless network difficulties (being locked in Randall's trailer without power, being accidentally unplugged overnight). Need more consistent power for wireless (mains). Also at least one laptop would not auto-reconnect for some reason. Prefer laptops using built-in wireless configuration instead of Dell/Lenovo/other software.

- Pizza arrived during critical setup time. We either need to be better about getting things setup up earlier (preferred) or move lunch later.

- Satellite qso continued to be frustrating. Need more preparation ahead of time. Fortunately, many of us learned quite a bit.
- Missing thrust bearing for CW2, causing delay to set up tower while Steve went to hardware store
- Rotator cable issues on CW1. Needs to be dealt with ahead of time or forego rotation. Is rotation that important anyway? It seems we'd be better served just pointing the beams east and be done with it. Or even better use 40m horizontal loops with an auto tuner: omnidirectional gain on bands below 40m and no rotation needed.
- Many many rocks found while trying to insert anchors for SSB station. Mast not raised until after contest started. I think we were waiting on a long wire or possibly just no one was leading the set up and it got forgotten about.
- Overall, need more prep ahead of time and more organization. Would like to see station captains in charge of ensuring mast/tower, antennas, coax, radio, interface, computer, etc... all ready as needed, when they are needed.
- "Seat of the pants" digital operation didn't result in many QSOs, need more preparation ahead of time (macros, etc..). Also had issues with fan dipole since my FT-897 doesn't have a built-in tuner and the fan dipole having issues due to not being on a standoff. Consider doing 2 SSB stations overnight instead if not enough CW ops.
- Weather, rain, and mud
- Operation from Mel's truck is quite cramped, difficult to use laptop for logging. Consider some sort of table and shelter next year for operating 6m. Also can't run laptop on inverter due to too much noise, need separate power for laptop.

Other:
- Hopefully fewer horse trailers (and electric fences) next time!
- Networking very useful for CW1/CW2, since they must be on separate bands at all times per contest rules. Not so important for SSB.
- I don't feel I had as much fun at FD as I'd had in years past. I think this was because it seemed I spent all my time helping during setup or operating, so I didn't have as much time to socialize. Hopefully next year we can increase the fun aspect, while still being competitive.

One other thing I've thought about is that Gamehaven
is a very large open area, which is nice on one hand and bad on another.
Nice in that we have plenty of space for antennas and reducing
interference. Bad, because everyone is so spread out. Being spread out makes setup more difficult since people were all over. It also makes it hard for visitors (and club members) to wander around and check everything out. The SSB station in the mess hall is a great "welcome center" for visitors and an area to congregate, but is quite far from the entrance, which is not ideal. And as Scott mentioned, made bathroom trips more annoying. I do like Scott's idea of having all the ops in the mess hall.

Subject: [rochester_hams] Field Day 2013: Lessons Learned

Here is some stuff I thought of... probably more to follow as more feedback comes in from others...

Went well:
- Army masts
- W0STV tower was easier than the Rohn Tower
- Shelters.

- CW2 shelter mosquito netting
- Mess hall building

Potential Improvements:
- CW2 tower could only deploy to 30ft. It was reported that it became too difficult to crank beyond. Need better cranking mechanism.

- CW2 fan dipole was shorted to tower. Needs a standoff.
- CW1 rotor cable was bad. End connectors were bad and wiring splicing was required. Soldering rotor cable on Saturday morning of Field Day is the wrong time to have to do this job!
- Break out tower raising job into "teams". Have three tower team captains that can lead each team so we can do more put up in parallel.
- Tower guy anchors were a major pain due to the rocks around the mess building. Not sure what action to take about this. It may be something we just have to deal with.

- Make sure all laptops are set with the correct time.
- We made zero 75m phone contacts. Why? Was the antenna not performing? Couldn't tune? Band conditions bad?

- After staring at our logs, we historically make the lions share of contacts on 15, 20, and 40m bands. This year the SSB station made 85% of its contacts on 20m alone. Across all the stations, we made only 3% of contacts on 80m. Wow! Clearly, we have a geographic advantage on 20/40m from the midwest. Is our low count on 10m and 80m because of propagation/geography or relatively poor antennas?

73,
Grant

1487. AmateurLogic.tv show on ham radio remote control

Yahoo group: rochester_hams
Date: 2013-07-19 02:34:57 UTC
From: dcnaatz
Topic: 1487 Message: 1487

I think most of us are aware of the twit.tv Ham Nation almost weekly TV episodes that can be received on a PC (either live or "recorded") or on an internet box like a Roku. Tonight I stumbled on AmateurLogic.tv which appears to be mostly focused on Amateur Radio and has been around for 56 episodes. It has George Thomas W5JDX the experimenter from Ham Nation plus two other hams, Tommy N5ZNO, and Peter VK3PB, and appears to be mostly sponsored by MFJ, Icom, and Gigaparts. About 16 minutes into episode 54 features a demo of the RemoteShack.com that lets you do remote control from your cell phone, but at a price tag of around $500. The next segment was a review of the R9 all band HF vertical. Then 32 minutes in was a demo on RS-BA1 software and optional RS-28 hardware to remote control a Icom 7410. Towards the end of the show there is a demo of the Ham Radio deluxe remote control similar to what my son & I gave our talk on at the May 2013 RARC meeting...interesting demo from VK3 using a W5's 3.7 mhz radio with no obvious latency problems!

My general impression is this show is not quite as polished as Ham Nation (no Joe Walsh music), but for those who can't get enough ham TV it may provide even more HR internet video. I watched this on my new Roku 3 but suspect you can also see it on a PC, tablet and smart phone at http://www.amateurlogic.tv/ or utube or itunes.

Yes, sometimes Amateur Logic is better than Ham Nation. I don't always have time to watch either one, but they are both entertaining. Another one that I find informative is HamRadioNow. HamRadioNow did a really in-depth interview with a couple of AMSAT officials recently, and really changed my whole opinion of the organization. It might look like there isn't much going on at AMSAT, but those modest little birds they are putting up contain a lot of new technology that should make the satellites last for many years in orbit.

Does anyone have a place where we could set up a shared 'remote' station? Or better yet, a place where we could have a club station with access for members?

1492. CXPedition to Isle Royale

Yahoo group: rochester_hams
Date: 2013-07-28 15:34:07 UTC
From: Bill
Topic: 1492 Message: 1492

I got this request from out Minnesota SEC -

To: Minnesota ASECs, DECs, ECs, OESs

From: KD0ASX, MnSEC

RE: ARES Participation in N8I CXpedition at Isle Royale Aug. 9-11.

I am requesting your participation making contact with the N8I Cxpedition at Isle Royale, on Lake Superior, Aug. 9-11. More information can be found at www.n8i.org.

Working at the CXpedition this year will be several ARES groups from northeast Minnesota, Northwest Wisconsin and the possibility to work with our counterparts in Ontario. Those participating on the island are treating this as a minimally-invasive deployment of radio resources to a very remote location, and are looking for direct ARES involvement.

Please do what you can to get the word out to your ARES members, and if they have the capabilities to work HF SSB, RTTY, CW, PSK31 and QRP, to please work the N8I station. Not only is it an opportunity to participating in something cool, but it also helps them out as well.

Thanks for all that you do for the organization.

Dan Anderson, KDØASX

1493. National Night Out

Yahoo group: rochester_hams
Date: 2013-08-04 20:43:26 UTC
From: Bill
Topic: 1493 Message: 1493

As I hope most of you already know, RARC is planning to have an information table and hopefully some kind of a demo going at the National Night Out meeting at Minnesota School Of Business on Tuesday evening.

I've written up a flyer we can use as a handout, and I plan to get a pile of them printed tomorrow.

What I'd like to know is if anyone is planning to attend a different NNO meeting. There are many of them in Olmsted County alone. If so, I'd be happy to give you some handouts, but I need to know before tomorrow so I can get them printed.

I'm not sure when we're meeting at MSB on Tuesday evening. KD0ORO is organizing this event from an RARC perspective. I think MSB is up the street from the Ford dealership - hiding back there a ways. The frontage road in front of dealer row ws torn up pretty good yesterday when we tried to go to Dairy Queen, so be advised...

Steve, you were closer the second try. Their call is N8I, and their website is <www.n8i.org>.

It's a "cxpedition" -- a close dxpedition -- to Isle Royale. The web site is interesting, and it should be fun to contact them this weekend.

1505. Re: National Night Out

Yahoo group: rochester_hams
Date: 2013-08-08 14:52:55 UTC
From: Jim Koelsch
Topic: 1493 Message: 1505

I was ask to send this along from Minnesota School of Business. I did send them a thank your for allowing us there during National Night Out. Here is there reply. To help clarify some what they said I did stay and help move tables to show our appreciation.

A special Thank You to the Rochester Amateur Radio Club, INC for all your help! Without you and all your help the day wouldn't have happened as flawlessly as it did. It is great to see the whole school come together to make the day special.

I did see that you were busy talking to people and you did get people's attention when your radios were going off. :-) We would like to see you back next year, if you would like to do this again!

Thanks again!
Amanda

I thought it went well - I think we recruited a couple new hams.

Next year, I'd like to see if we can have people at more locations. There were 59 meetings in Olmsted County this week. It will take a while to visit them all.

1507. Tower

Attachments: 2 described; binary payloads are missing from this source WARC

Here are the before and after pictures of the crank up tower after retrofitting it. Now just have to paint it. It can operate 5 antennas at once. HF inverted V-wire and NVIS, 2 meter local and long range at once, Digital, ATV, or cross-band long range on both 2/440. It will be at the Byron club meeting on Tuesday.

1510. Red Cross Drill Saturday Aug. 17

Yahoo group: rochester_hams
Date: 2013-08-14 21:59:40 UTC
From: Bill
Topic: 1510 Message: 1510

Peter, KN0CKS, writes:

"ARES,
August 17th from 9:00AM to about 2PM The American Red Cross will be having a shelter drill at Resurrection Catholic Church (next to Mayo High School). During this drill there will be several communications between the shelter and the chapter. I would like to have ARES be available to help educate users on how to use 800Mhz radios and be a backup communications option with the repeaters or simplex. For the drill, we are attempting to stage all of the chapter activities in the parking lot of the church (or in another part of the building if it rains) so we will still need two people, but both on the drill site not at the chapter. One to represent the shelter and another to represent the virtual chapter. Let me know if you can support this drill and I'll add some more communications exercises into the scenario.
-Peter"

I plan to be there Saturday morning, and hope we can round up some more volunteers. We have another exercise tomorrow evening, which is the Red Wing Atomic Disaster Drill. I think that one is covered, but we might need a couple more ARES volunteers at the red Cross building around 6 p.m.. The exercise is from 6-10.

1511. Pot Luck, Auction, and More...

Yahoo group: rochester_hams
Date: 2013-08-14 22:15:01 UTC
From: Bill
Topic: 1511 Message: 1511

Well, I thought our pot luck dinner and auction went pretty well for a first effort. We raised about $70 for the club, I think. If we choose to do this again, I think it will just be part of a regular club meeting, and avoid renting a hall, etc.. Either that, or make it a BIG deal, rent the fairgrounds, advertise it everywhere in driving range, and sell tickets.

Sorry you missed out if you weren't there. We did auction off three pretty decent radios that went for peanuts. One of them didn't sell - a Kenwood TMV7A from KC0NPF that he was asking a minimumm of $100 for. That is still a pretty good deal for a radio that will do crossband repeat. Contact Byron if you are interested.

One item discussed at the meeting is the September VHF contest. The executive Committee met last month, and we had decided that the club should make a club effort in this contest. We'd like to set up a nice station somewhere and let people get a chance to see how to operate a VHF contest. Mel, KC0P is also working on this idea. The contest is Sept 14 and 15. KD0ORO has a site near Pine Island, or we may just want to go to a local high spot.

Further down the road, my basement has to be rebuilt again thanks to two broken water pipes. This time, I am going to build a classroom, ham shack, and 'lab' into the huge, empty bonus room. This is where I intend to teach future classes, and more than just the entry Tech class, too.

I would like to start getting an idea how much interest there would be in classes or informal groups to do these things:
1. Study for General Class
2. Learn the Morse Code
3. Build electronic kits.
Once I have the classroom ready, I'm thinking about starting a group to do these three things, perhaps working on it a couple hours every Saturday - maybe after breakfast at Brothers?

The room won't be ready until January or February due to some 'flood proofing' I am putting in so I never have to deal with that again. Another goal is to have at least one 'remoteable' HF rig there. I have two brothers who are 'antenna challenged', and I certainly know a lot of other people in that boat. So, with any luck, we will be able to share a radio this way.

1512. Rookie Roundup

Yahoo group: rochester_hams
Date: 2013-08-18 20:11:16 UTC
From: Bill
Topic: 1512 Message: 1512

Well, something did slip my mind - no surprise there.

The Rookie Roundup RTTY is this afternoon. It runs until 7 p.m. our time.

I am just giving out some contacts on 20 meter RTTY, but if a rookie wants to join me, I am home for a while, anyway. Also, I haven't looked on 10 meters, but 28.080 is the RTTY frequency for the contest, and any ham should be able to get on there - I can give out some local contacts if anybody is interested. I'll call CQ on 10 from time to time.

1514. Ham Radio in Colorado

Yahoo group: rochester_hams
Date: 2013-09-14 00:44:21 UTC
From: <k0rgr@...>
Topic: 1514 Message: 1514

I found this mention in the Denver Post very interesting:
"At least three Colorado towns — Lyons, Estes Park and Jamestown — were entirely isolated by water. Xcel Energy cut off power to most of Lyons. In Estes Park, a community of about 6,000 people, both telephone lines and cellphone towers were down. As darkness fell, the only communication into or out of the town was by ham radio."

So, all this ARES stuff we do actually comes in handy at times!

As many of you know, I've got lots of family in the Boulder area, so I've been watching this event pretty closely. I've been using AB0BW's IRLP to get on the Denver reflector, and I've talked to a couple people, but not much news. It's node 9874, if anyone is interested.

Topic: 1515 Message: 1515

I don't know if any of you folks actually use the Yahoo Groups database, but I have to say that I think they have really loused it up to the point of being almost unusable.

I guess as long as the email reflector portion of it is working, I will continue to keep this group here, but as far as finding anything on the group, it's not pretty, and as a moderator, I'm not sure I can do what's needed now. I guess if we get some spam, I'll find out fast.

I'm not happy - I think the changes were made without consulting anybody, and without much, if any, study of the way users were actually using it. That's beyond arrogance.

1516. Re: YahooGroups

From: Gil Baron W0MN
Topic: 1515 Message: 1516

If you mean the posts on the group then it never has been much as far as searching goes.
Email and especially to Outlook or similar is the only way to go with yahoo groups.
OTOH thy have been and still are the fastest most reliable and still free reflector around.
At least they also have a file share even though it too has problems it too is there and free

Reading groups on the web always has been worthless in my opinion.

1517. REMINDER: Rochester 10 meter net 8pm Tue

Yahoo group: rochester_hams
Date: 2013-09-16 21:12:38 UTC
From: <dcnaatz@...>
Topic: 1517 Message: 1517

CQ CQ the Rochester MN 10 meter net. Please join us at 8pm CDT Tuesday September 17 on 28.325 upper side band. I will be net control for that net which depending on the number of checkins usually runs until at least 8:15pm.

For a topic this week I am going to propose a couple of items:

1. When was your last 10 meter QSO besides this net? 10 has not done very well this past summer with low sunspot/solar flux numbers and at least my observation somewhat limited eskip around the US. I have not had a 10m eskip QSO for 2 months, but we did have a good opening during Sat evening at Field Day. Note 15m has had frequent openings into Europe, Africa and Japan so if 10 is dead check out 15.

2. What other recent contests have you operated on including thoughts on them?
We are just getting into the traditional contest season. This weekend's VHF contest or Worked All Europe events do count so please ask questions or make comments during this informal net.

I look forward to chatting with you Tuesday @ 8pm!

1520. Free Lecture by DPS Deputy Director Joseph Kelly

Yahoo group: rochester_hams
Date: 2013-09-20 16:36:45 UTC
From: Jeremiah Oeltjen
Topic: 1520 Message: 1520

Good morning everyone:

While not directly tied in to Amateur Radio I think some members of the list may be interested in hearing about this.

In case you are unfamiliar, UMR CONNECTS is a free professional speaker series that takes place on Tuesday evenings at 7:00 p.m. It is open to the public and no preregistration is required. The event takes place on the 4th floor at University Square (formerly the Galleria Mall).

The next UMR CONNECTS on September 24th is by Joseph Kelly, Deputy Directory Homeland Security & Emergency Management, Minnesota Department of Public Safety. He will be discussing "the most imminent issues arising in the area of terrorism and ways Homeland Security secures Minnesota against these acts, and disaster relief strategies."

See http://r.umn.edu/UMRCONNECTS for details.

73,
Jeremiah, AG0T

QST de W1AW
DX Bulletin 39 ARLD039
From ARRL Headquarters
Newington CT September 26, 2013
To all radio amateurs

SB DX ARL ARLD039
ARLD039 DX news

This week's bulletin was made possible with information provided by I3VJW, N7QT, NC1L, W2GEZ, W3UR, QRZ DX, the OPDX Bulletin, 425 DX News, The Daily DX, DXNL, Contest Corral from QST and the ARRL Contest Calendar and WA7BNM web sites. Thanks to all.

ROTUMA ISLAND, 3D2. Operators 3D2RA, 3D2GC/p and 3D2DD/p are QRV until October 11. Activity is on 160 to 6 meters using CW, SSB, RTTY, SSTV and PSK31. QSL 3D2RA via LZ2HM, 3D2GC/p via LZ1GC and 3D2DD/p direct to home call.

SENEGAL, 6V. Luc, F5RAV will be QRV as 6V7T/p from N'gor Island, IOTA AF-045, during October. Activity will be on 40 to 10 meters using SSB and PSK. QSL direct to home call.

CROATIA, 9A. Members of the Verona DX Team will be QRV as 9A/IQ3VO from Dugi Otok, IOTA EU-170, from September 28 to October 1. This includes being active from the Veli Rat Lighthouse, ARLHS CRO-183. Activity will be on all HF bands and 6 meters, except 160 meters, using CW, SSB, RTTY and PSK31. QSL via IQ3VO.

UGANDA, 9X. Nick, G3RWF is QRV as 5X1NH from the University of the Mountains of the Moon in Fort Portal, Western Uganda and

occasionally from Kampala until November 16. QSL to home call.

TAIWAN, BV. A group of operators will be QRV as BV60V until the end of 2013 in celebration of the 60th anniversary of the Victory Broadcasting Company. This includes being a Multi/Multi entry in the CQ World Wide RTTY DX contest. QSL via operators' instructions.

BOLIVIA, CP. Peter, DF7NX is QRV as CP9/DF7NX until October 15. Activity is on the HF bands using only CW. QSL to home call.

MADEIRA ISLANDS, CT3. A group of operators will be QRV as CR3A in the CQ World Wide RTTY DX contest as a Multi Op entry. QSL via operators' instructions.

SABLE ISLAND, CY0. Operators VE1RGB, AI5P and WA4DAN will be QRV as CY0P from October 1 to 11. QSL direct via VE1RGB.

ESTONIA, ES. Station ES9C will be QRV as a Multi/Multi entry in the CQ World Wide RTTY DX contest. QSL via operator's instructions.

AUSTRAL ISLAND, FO. Grant, KZ1W and Rob, N7QT will be QRV as TX5D from Raivavae Island, IOTA OC-114, from October 2 to 14. Activity will be on 80 to 10 meters using CW, SSB, RTTY and PSK. QSL via bureau.

JAPAN, JA. Special event station 8J9ECZEN is QRV during October to celebrate the 10th anniversary of Echizen's Railway. QSL via bureau.

MARIANA ISLANDS, KH0. Kazuo, JH8PHT plans to be QRV as AH0KT from Saipan from October 3 to 7. Activity will be on the HF bands and 6 meters using CW, SSB, various digital modes, along with AM and FM on 10 meters. QSL to home call.

LUXEMBOURG, LX. Members of the Radio Club Leuven will be QRV as LX/OR5M in the CQ World Wide RTTY DX contest. QSL via ON4CP.

FINLAND, OH. Members of the Reila Beachboys will be QRV as OH2ET and celebrating their 10th anniversary by participating in the CQ World Wide DX RTTY Contest as a Multi-2 entry. QSL via operator's instructions.

ICELAND, TF. Mike, W2GEZ, will try to be QRV as TF3IRA the early part of October. Activity will be on all bands. QSL via operator's instructions. In addition, look for the Radio Foxes to be QRV as TF2R as a Multi/Single entry in the CQ World Wide RTTY DX contest. QSL via operators' instructions.

COTE d'IVOIRE, TU. Dimitri, F5SWB is QRV as TU5DF until October 20. Activity is on 40 to 10 meters using mostly CW with some SSB. QSL to home call.

BERMUDA, VP9. Operators K3GP, WW3S and ND8L are QRV as VP9/home calls until September 30. In addition, they will be QRV as VP9I in the CQ World Wide RTTY DX contest. QSL VP9I direct via WW3S and all others to home calls.

NEW ZEALAND, ZL. To commemorate the 90th anniversary of the first antipodal QSO between Shag Valley, New Zealand and London, England, special event station ZM90DX will be QRV from October 1, 2013 to October 31, 2014. Activity will be on all bands and modes. QSL via M0OXO. In addition, look for ZM1A to be a Multi-2/High Power entry in the CQ World Wide RTTY DX contest. QSL via operators' instructions.

CHANGE IN OPERATING SCHEDULE. As reported in DX news ARLD038, the TN2MS Congo operation is scheduled for October 12 to 24.

THIS WEEKEND ON THE RADIO. The ARRL EME Contest, CQ Worldwide RTTY DX Contest, NCCC RTTY Sprint Ladder, NCCC Sprint, AGCW VHF/UHF Contest and the Texas QSO Party are all on tap for his upcoming weekend. The 222 MHz Fall Sprint is scheduled for October 1. Please see September QST, page 79, October QST, page 89, and the ARRL and WA7BNM contest web sites for details.

From: Steve Wiebke
Topic: 1528 Message: 1528

The SET event will start around 10:00 AM this Saturday and end Sunday at 10:00 AM. Do to the rain, the set up may be slower. I would recommend hams look at coming out after 12:00 on Saturday to allow us to deal with the rain issues. Talk in with questions or for information will be on the 147.255 pl 100 repeater. 73

From: Niel - W0VLZ
Topic: 1528 Message: 1529

Steve,

Sorry I missed the SET event at the KOA Campground.

Like we spoke about last night over BBQ, I emailed Roger/W0KOA today and he said to come on down and do some picnic table hamming.

The weather was great and Roger gave me a tour the place. The HF antenna pole is about 25' tall and Roger should have a pulley at the top of it soon. It will make a fine support for either an endfed or center fed antenna. Today I used my KX3 on CW at 5 watts and a nearby tree to support my 20 meter endfed zepp (http://w0vlz.blogspot.com/search/label/20%20Mtr%20Zepp).

The bands weren't real active but the reverse beacon network said I was getting out. See http://www.reversebeacon.net/dxsd1/dxsd1.php?f=0&c=w0vlz&t=dx . I had nice QSOs on 20 meters with FL and CO before changing bands to 30, activating the antenna tuner, and working TN.

73,
Niel - W0VLZ

1530. Mankato Marathon Needs Help

Yahoo group: rochester_hams
Date: 2013-10-14 14:22:42 UTC
From: <k0rgr@...>
Topic: 1530 Message: 1530

Hello Everyone:

We need still some 2 to 5 operators for NEXT SUNDAYS MANKATO MARATHON. This event will start from roughly 0700 til almost 1300 hours and if you need to be out sooner, I am sure we can arrange that. HAM RADIO COORDINATOR for this one is Paul Spevacek - and he can reached at: prospivy@yahoo.com mailto:prospivy@yahoo.com.

I hope to see you all there, and again this is the last hurrah for Marathons for 2013....

Thank you all for your support......

Don

1532. CQ the Rochester 10 meter net 8pm Tuesday

Yahoo group: rochester_hams
Date: 2013-10-15 15:00:02 UTC
From: <dcnaatz@...>
Topic: 1532 Message: 1532

It's again my turn as net control of our weekly 10 meter net - please join me at 8pm tonight on 28.325 upper side band. I've been surprised the past few weeks as we have had some "guest" checkins from area hams so while our net founder Dick WA4EJJ remains in rehab, let's do our best to keep this net going especially now during the start of our dark cold season.

A couple of items for possible discussion tonight:

1. Anyone heard or worked some of the DX coming through on 10 meters the past few weeks? While we may not be blessed with the great opening we had during Fall 2011, I have heard plenty of S American and Caribbean stations plus Hawaii and ZL New Zealand in October. I have also worked a few California stations with booming 59 signals, which should not be a big deal but for some reason summer E skip tends to favor the area from PA down to TX, not so much propagation to the West.

2. If you want to make many 10m DX contacts besides the Dec 14 ARRL 10m contest there is the CQ magazine World Wide DX event a week from Saturday, on Oct 26-27. It actually starts at 7pm CDT on Friday for 48 hours.
http://www.cqww.com/rules.htm
The report you give is really simple: 59 04 for MN, or "five nine zero four" to speak it. Here is a list of CQ Zones -
http://www.cq-amateur-radio.com/cq_awards/cq_waz_awards/cq_waz_list.html
We will discuss this more tonight if there are questions. If the band is open at all you should be able to work DX stations calling CQ contest for sure in the western hemisphere even with a simple antenna.

I know Paul helped with the Med-City this past Spring. If I didn't have plans with the long weekend finishing up a kitchen remodel I would entertain going over. I purposely set Paul up with a long running site (I think it should have gone for maybe 4-4.5 hrs) and tried to make it so it was one of the later starts (8:30) since I knew he was coming a fair distance to help. Hopefully, he could do the same for you.

The price of copper has made it not worth the bother any more. I remember when it was < 1 cent per foot for this and available even in hardware stores. My 50 foot 8 gauge copper ground even 5 years ago cost 30 bucks!

1539. 10 Meters Jumping

Yahoo group: rochester_hams
Date: 2013-10-20 16:42:53 UTC
From: <k0rgr@...>
Topic: 1539 Message: 1539

10 has been open for DX the last two days. I even worked somebody on 29.6 FM yesterday, and today there are Europeans all over the band. I hope this is an indication of how things will be this winter! Better get it while it's hot!

1540. Crank up tower.

Yahoo group: rochester_hams
Date: 2013-10-20 20:57:57 UTC
From: Steve Wiebke
Topic: 1540 Message: 1540

The crank up tower worked very well at the S.E.T. event. I was not satisfied with how it anchored with the 4 point system. It is being modified to a 5 point system that will improve stability by 22%. With this improvement the 75 foot tower deployment will be very safe to do.

The crank up tower has the following antenna systems on board:
(1)- 2 meter 200 watt vertical antenna
(2)- 2 meter dipole antennas
(1)- 40-80 meter NVIS wire antenna for HF
(1)- 440 yagi antenna. For D-star, ATV, and crossband operations.
(1)- Wi Fi antenna with access point.
(1)- Satellite dish for media information, and future satellite internet linking.
(2)- Open spaces on top to add any V- wire and beam antenna

These accessories will be added:
1000 watt 120 volt lighting system.
A weather/wind information system.

It is done but for the paint job of Yellow, Red and Black. Do not know if the weather will hold to get this done in 2013.

From: <dcnaatz@...>
Topic: 1539 Message: 1541

I agree Bill, as I type this morning 10am CDT 10 meters is totally open to the NE, Europe, Russia, etc Jus worked RN3DN Moscow now on 28.375.

The entire SSB band 28.3 to 28.6 is full of European signals. Some pileups of them calling US and Caribbean stations in preparation for this weekend's CQ WW SSB contest. ANYONE with 10 meters should get on this weekend if this opening continues. I suspect those that don't get home till 5pm could still work DX into the Pacific, possibly NW towards Japan (I am busy after 4 today but will have some fun now through early afternoon .. anyone reading this from IBM, this is a great time to try out W0IBM over lunchtime).

> The entire SSB band 28.3 to 28.6 is full of European signals. Some pileups of them calling US and Caribbean stations in preparation for this weekend's CQ WW SSB contest. ANYONE with 10 meters should get on this weekend if this opening continues. I suspect those that don't get home till 5pm could still work DX into the Pacific, possibly NW towards Japan (I am busy after 4 today but will have some fun now through early afternoon .. anyone reading this from IBM, this is a great time to try out W0IBM over lunchtime).

This all sounds good Steve...
--Bob-- AB0BW

On Sunday, October 20, 2013 3:53 PM, Steve Wiebke <wiebke@...> wrote:

The crank up tower worked very well at the S.E.T. event. I was not satisfied with how it anchored with the 4 point system. It is being modified to a 5 point system that will improve stability by 22%. With this improvement the 75 foot tower deployment will be very safe to do.

The crank up tower has the following antenna systems on board:
(1)- 2 meter 200 watt vertical antenna
(2)- 2 meter dipole antennas
(1)- 40-80 meter NVIS wire antenna for HF
(1)- 440 yagi antenna. For D-star, ATV, and crossband operations.
(1)- Wi Fi antenna with access point.
(1)- Satellite dish for media information, and future satellite internet linking.
(2)- Open spaces on top to add any V- wire and beam antenna

These accessories will be added:
1000 watt 120 volt lighting system.
A weather/wind information system.

It is done but for the paint job of Yellow, Red and Black. Do not know if the weather will hold to get this done in 2013.

Well, this will be a first. We had a class recently that was 50% female, but this one is going to be 100% female! I have three ladies coming on Saturday and one of them has volunteered to make chili. It should be a great class!

It's not too late if you know someone who wants to get licensed. Have them call me!

Subject: 2013 SKYWARN Recognition Day - Saturday, December 7th

As a way to show our appreciation for amateur radio and all the amateur radio SKYWARN operators that help us year after year, our office will be hosting a SKYWARN Recognition Day on Saturday, December 7th - 8am to 4pm CST.

We'd like to invite all amateur radio operators who have helped with severe weather communication to visit and assist us with this fun event. Local amateur radio operators/clubs will have antennas and HF equipment so we can make contacts with others around the country and internationally. This is also a chance to meet other operators and clubs from around our 3 state service area.

A website is dedicated to the event at: http://hamradio.noaa.gov/

The website will be updated with our information shortly. You can view local pages from the last few years at:

* http://www.crh.noaa.gov/arx/?n=ham2012

* http://www.crh.noaa.gov/arx/?n=ham2011

* http://www.crh.noaa.gov/arx/?n=ham2009

So, help us spread the word through your clubs and upcoming meetings. We are hoping people stop in, visit, and help work the radios for awhile. Our office will have lunch, snacks, and beverages on hand. We will also be able to give you short tours.

Subject: THANK YOU

I would like to extent a HUGE thank you to everyone that assisted with the 4th Annual GAMEHAVEN "True" Cross Country Run. It was a big success and it could not have been pulled off with out each and every one of you.

I thought overall everything went exceptionally well and the use of the unfinished Community Center worked out quite well. both for room and to keep everyone out of the wind and the cold until just before the start of the race. We received many compliments on the race and all of that is attributable to all of your efforts.

I would like to extend a sincere thank you to Jim Mason for all of his efforts in promoting the race, for helping with course set up and for everything he did on race day. Without your help Jim, this race would not even get off the ground.

Listed below are the many helpers that assisted and what their roles were;
Walt Borland, course preparation, cook of the "pepper" chicken noodle soup, preparing and serving the food and after race course pickup
Jay Burke for positioning the culvert obstacle, lining up the porta toilets and hay bales for additional obstacles on the course and for setting up the timber frame finish line arch
John Davis for providing the port a toilets and the hay bales
Ross Hamernik race registration
Tina Hermanson, race registration and finish line scoring
Rich Holland for race registration and finish line scoring
Father Frank Jones, course preparation, food preparation, serving and clean up
Lynn Goldsworthy for serving the food and helping with cleanup
Steven Kuehn, helping with serving the food
Dan Lovik, noise maker and for providing the starting "gun" and the American flags on the course
Bill Marshall, photographer
Larry Pederson, race registration

Ken Persons data entry, race scoring and results production
Conner Reed for picking up Gatorade, water and other supplies, helping with registration and finish line timing
Deena Reed, logo design for the t-shirts
John Resman, race scoring and finish line timing
Jeff Robertson, registration and race scoring
Tim and Judy Schatz, food preparation, serving the food and clean up and race course pickup
Tim Tofil and the eight scouts of Troop 80 for staffing the water stop on the course, Tim also assisted with Friday night packet pick up at the Running Room
Dee Schemmel, race registration (She's been helping with races since the middle 90's, thank you Dee for your continued support)
Sherry Boucher/Trantow for assisting with registration and finish line scoring
Steve Weibke and his amateur radio crew of five others, for being our eyes and ears on the course, maintaining security for all of the runners. Steve if would please thank you crew for me.

By my count that adds up to 37 volunteers.

Thank you all again,
KC Reed

1553. Sweepstakes - How Did You Do?

Yahoo group: rochester_hams
Date: 2013-11-18 14:12:39 UTC
From: <k0rgr@...>
Topic: 1553 Message: 1553

I missed my CW Sweeps weekend, so I decided to give SSB a shot this year, and to make it more interesting, I decided to try QRP with my little FT-817ND and my new antenna farm - a Comet H422 that tops out about 60' high, and the DX-CC dipole below it.

So what can you do with a rotary dipole and 5 watts? I made 250 Q's in 71 sections in about 14 hours on the air. I think I tried to work all of the sections I missed, too, but the stations there couldn't hear me. Worked all but ND, IA, and NE - got all of Canada except for NL and three of the new Ontarios (worked a ton of VE3's in GTA, though). I had many come back to K0 R-something-R but they couldn't copy me. I was very happy to work a VE8 because a VY1 got my exchange OK, but couldn't hear me confirm it, so he didn't log me. That happened too many times.

With QRP it's all hunt and pounce - I think I only worked 3-4 people from calling CQ.

From: Peter Wollan
Topic: 1553 Message: 1556

Looking at Bill's results, I feel a bit embarrassed. I had 68 contacts, 36 sections, operating QRP from Essex Park. True, it was only about 7 hours total, but still. I put up a 44 foot dipole fed with ladder line, at about 20-25 feet, and made some contacts on each of 40, 20, 15, and 10 meters -- but most on 15, for some reason. On 20 and 40 signals were overall weaker compared to band noise, and people had much more trouble hearing me. They also had trouble hearing me on 10, even though the band was quiet and they were loud to me. But 15 worked pretty well.

But operating outside in November is pretty uncomfortable. Not only do you have to remember to bring everything you will need (there's a reason people make up go-packs!), but sitting still in the cold means you have to remember to dress very warmly indeed. Shivering makes for poor logging.

I didn't hear Bill or Dave, but I did hear Pat and Fred in passing, and I got in the log with Grant. Overall, it was fun, but I don't think I'll try another Field Day type operation till it gets warmer.

Sorry this is so late but I just got back from a few days in Madison.
I will be net control for tonight's 10 meter net at 8pm on 28.325 upper side band.
We would like to get a good showing of checkins now that it's cold and dark outside to beef up this net. How many of you have worked some new countries the past 3-4 weeks on 10m? It was pretty good (not outstanding) on Saturday afternoon for US propagation and I heard some JAs calling CQ amidst the Sweepstakes craziness.

Well, I had the advantage of a new antenna farm installed by NZ0S and KM0PT. Conditions were also amazing. With the FT817 peanut whistle, I got several reports that I was well over S9 on the coasts on 10, and S5 on 20. A lot of people commented on how strong my QRP signals was, but those were the guys who were literally pinning my meter, too.

I am really pleased with the rotary dipole. I never had to rotate it more than 90 degrees, except when working that VE8. I did a little comparison between the rotary and the fixed dipole for 40, and in some directions, the fixed dipole won - it should, the rotary dipole is only half-sized for 40. But when working stations that were end-on to the fixed dipole, the rotary won.

As for Midwest Wireless Assn - I was a member a couple years back, and just haven't done much contesting since. I'll add it to the log entry.

I finally got home from Wisconsin so I could bringup N1MM and revisit my score. I wasn't even going to bother this year heading out of town, but my wife was busy late Sat afternoon before we left so I operated 3 hrs @ 100 watts from 3-6pm Sat on mostly 10 & 20, some 15 and 40. I mainly did S&P (probably why Peter did not catch me only 1 mile away but I did blow out Grant's rcvr on 20m while I was pointed east at him!) but did a little CQ time on 10 & 20.

130 Qs 57 sec 3 hrs (43 Qs 18 sec on 10m)

I will submit this small score to both ARRL & MWA as Team South needs the points. I think the main thing is we all had fun right?
BTW Bill I had a couple reports of 20 over 9 only running my 100 watts (Grant has the W0IBM SB220) so the bands were exceptional. My new 40m full size vertical did ok, still not a beam or 4 sq for sure.

I did a little comparison between the rotary and the fixed dipole for 40, and in some directions, the fixed dipole won - it should, the rotary dipole is only half-sized for 40. But when working stations that were end-on to the fixed dipole, the rotary won.

As for Midwest Wireless Assn - I was a member a couple years back, and just haven't done much contesting since. I'll add it to the log entry.

---In rochester_hams@yahoogroups.com, <peter.wollan@...> wrote:

Looking at Bill's results, I feel a bit embarrassed. I had 68 contacts, 36 sections, operating QRP from Essex Park. True, it was only about 7 hours total, but still. I put up a 44 foot dipole fed with ladder line, at about 20-25 feet, and made some contacts on each of 40, 20, 15, and 10 meters -- but most on 15, for some reason. On 20 and 40 signals were overall weaker compared to band noise, and people had much more trouble hearing me. They also had trouble hearing me on 10, even though the band was quiet and they were loud to me. But 15 worked pretty well.

But operating outside in November is pretty uncomfortable. Not only do you have to remember to bring everything you will need (there's a reason people make up go-packs!), but sitting still in the cold means you have to remember to dress very warmly indeed. Shivering makes for poor logging.

I didn't hear Bill or Dave, but I did hear Pat and Fred in passing, and I got in the log with Grant. Overall, it was fun, but I don't think I'll try another Field Day type operation till it gets warmer.

I missed my CW Sweeps weekend, so I decided to give SSB a shot this year, and to make it more interesting, I decided to try QRP with my little FT-817ND and my new antenna farm - a Comet H422 that tops out about 60' high, and the DX-CC dipole below it.

So what can you do with a rotary dipole and 5 watts? I made 250 Q's in 71 sections in about 14 hours on the air. I think I tried to work all of the sections I missed, too, but the stations there couldn't hear me. Worked all but ND, IA, and NE - got all of Canada except for NL and three of the new Ontarios (worked a ton of VE3's in GTA, though). I had many come back to K0 R-something-R but they couldn't copy me. I was very happy to work a VE8 because a VY1 got my exchange OK, but couldn't hear me confirm it, so he didn't log me. That happened too many times.

With QRP it's all hunt and pounce - I think I only worked 3-4 people from calling CQ.

I worked at SS this year with a 2 fold goal, one to get the clean sweep, and 2, to try and “run” for a while. I ran high power most of the time, and did a personal best. my best “run” was on 40, and pulled 261 Q’s for 4 hours, averaging just over 1 Q per minute. “Running” IS more productive than Search and Pounce, but it’s draining.
I had about 14 hours BIC. Here’s what I sent to MWA for Team South...
ARRL Sweepstakes Contest, SSB

Call: W0BM
Operator(s): W0BM
Station: W0BM

Class: SO Unlimited HP
QTH: Kasson MN
Operating Time (hrs): 8

Summary:
Band QSOs

160:
80: 53
40: 330
20: 69
15: 173
10: 23

Total: 648 Sections = 83 Total Score = 107,568

I finally got home from Wisconsin so I could bringup N1MM and revisit my score. I wasn't even going to bother this year heading out of town, but my wife was busy late Sat afternoon before we left so I operated 3 hrs @ 100 watts from 3-6pm Sat on mostly 10 & 20, some 15 and 40. I mainly did S&P (probably why Peter did not catch me only 1 mile away but I did blow out Grant's rcvr on 20m while I was pointed east at him!) but did a little CQ time on 10 & 20.

130 Qs 57 sec 3 hrs (43 Qs 18 sec on 10m)

I will submit this small score to both ARRL & MWA as Team South needs the points. I think the main thing is we all had fun right?
BTW Bill I had a couple reports of 20 over 9 only running my 100 watts (Grant has the W0IBM SB220) so the bands were exceptional. My new 40m full size vertical did ok, still not a

beam or 4 sq for sure.

Here is the summary that I've submitted for SS SSB. It was a fun one. My goal was to do my very best, and try to beat my all time best score. If I could have ended the contest after the first four hours I would have had an all time personal best. The first hour I logged 118 qso's, followed by 109, 103 and 107 for the next three hours. Unfortunately, nothing good lasts forever. The second day was much slower (as always) than the first.

Although it didn't end up being my highest score ever, it was still pretty good given the limitations of the station and its operator.

Last weekend and this coming weekend is the AWA 1929 QSO Party....transmitters must use tubes and designs available in 1929. I have my station set up and running (see http://w0vlz.blogspot.com/search/label/AWA%201929%20CW%20Contest). I'm making contacts but I'd like an off the air recording of my signal.

Anyone willing to have a sked on 80, record my signal and email me the file?

Thanks,
Niel - W0VLZ

From: <dcnaatz@...>
Topic: 1570 Message: 1570

Please do checkin tonight on 28.325 upper side band. I'd like to discuss both recent conditions and how well you did on this past weekend's 10 meter contest (and if you weren't on that contest, comments orquestions on any recent operating event, eg, working DX or a special event station will suffice!).

I am also going to propose we SUSPEND this 10 meter net until sometime in January. No one will want to be on the radio for Christmas eve or New Years eve ..... well there are some who might on New Years eve, but I suspect most wont however if you want to be on or be a net control we need more check ins to keep this net alive!

I will be gone some of the weeks in January through February so I am looking forward to talking to you tonight.

Dave,
I'll on the net tonight...Charlie, W0TAX, has been trying the past few weeks to join us...but we haven't heard him...
I'll turn my squelch down to see if I can hear him tonight...

Please do checkin tonight on 28.325 upper side band.
I'd like to discuss both recent conditions and how well you did on this past weekend's 10 meter contest (and if you weren't on that contest, comments orquestions on any recent operating event, eg, working DX or a special event station will suffice!).

I am also going to propose we SUSPEND this 10 meter net until sometime in January. No one will want to be on the radio for Christmas eve or New Years eve ..... well there are some who might on New Years eve, but I suspect most wont however if you want to be on or be a net control we need more check ins to keep this net alive!

I will be gone some of the weeks in January through February so I am looking forward to talking to you tonight.

Dave

Thanks for the invitation. I have family stuff tonight so likely will be tied up. I had a good 10 meter contest- more than 1500 contacts on CW And SSB.

Best regards,

Scott Wright

Wabasha had a great turnout for their RRT clas - 20 volunteers, so let's try to match them in the Rochester area. It's official - we will have class in Rochester on January 25th, from 1-5 p.m.. The class is open to any ham interested in helping Red Cross in a disaster, and particularly if you want to be part of the Rapid Response Team for your county. I hope to have someone there to help those of us lacking Red Cross ID's to obtain them, too.

The class will also be held in Mankato and Owatonna this month. Owatonna will be on the 18th.

Here is the official announcement from Red Cross:

The Southern Region of the American Red Cross, in collaboration with Minnesota ARES, is working to increase the number of ham radio operators within its group of volunteers. We are working to integrate amateur radio into each of the Chapters in the Southern Region to improve Red Cross preparedness and ability to respond to local disasters by establishing Rapid Response Teams in each of the Counties served by the Region.

The Red Cross - ARES Rapid Response Team orientation training will be held at the following locations:

January 20 17:00 - 21:00 Mankato Red Cross. 105
Homestead Dr
January 18 13:00 - 17:00 Owatonna Fire Department 107 west
Main St,
January 25 13:00 - 17:00 Rochester Red Cross 310 14th
Street SE

This orientation is free

You do not need to be a member of a radio club, a current Red Cross volunteer, or a member of an ARES group to participate in the Red Cross Rapid Response Team training.

If you are interested in learning more about the Rapid Response Team effort or would like to register for the course you may contact me via email at barry.altman@redcross.org mailto:barry.altman@redcross.org

Thank you

1580. New Ham Radio Video

Yahoo group: rochester_hams
Date: 2013-12-21 20:46:45 UTC
From: <k0rgr@...>
Topic: 1580 Message: 1580

K1AN has created a new amateur radio video that I think is just fabulous. You can find it here at this web site:http://www.radioqrv.com/ http://www.radioqrv.com/

Discovering Amateur Radio comes in two versions, one 19 minutes and the other 31 minutes.I watched the full version. I found the visuals were amazing - they really grab your attention. But the best part of this video is that it's done from a totally international perspective, and it's appropriate for any audience, anywhere. It is very professional, and starts off and ends with discussions of all the myriad ways radio and RF technology is used in our world.

Please check out the video and then think of ways that we can get it in front of the public.

1581. Radio Classes for 2014

Yahoo group: rochester_hams

From: <k0rgr@...>
Topic: 1581 Message: 1581

Our VE team has published the dates for VE Tests in Rochester, so I am scheduling the following radio classes for 2014. Please help me beat the bushes and get students for these classes. The texts for the classes are the ARRL License Manuals for Technician and General classes.

The Tech classes are two consecutive Saturdays (with an exception for the first one)
General classes will be taught on Mon-Wed-Fri and the following Monday, four hours a session. These dates are somewhat flexible.
Tech Class #1 - SUNDAY 1/26 (moved due to a Red Cross class on 1/25)
SATURDAY 2/1
General Class #1 - 1/27, 29, 31 and 2/3

Testing session #1 - 2/6

Tech class #2 - SATURDAY 4/26 and SATURDAY 5/3
Testing session #2 - 5/8

Tech class #3 - SATURDAY July 26 and SATURDAY August 2
General class #2 - July 21, 23,25, and 28
Testing session #3 - 8/7

Tech class #4 - SATURDAY Oct 25 and SATURDAY Nov 1
Testing session #4 - 11/6

I'm planning to do all of the classes at my house in my new 'classroom'. The electrician was here to put in some new outlets and pull a bunch of coax, rotor cables and CAT5 cable to the new room today, and I'm hoping the new floors and walls will go in the next couple weeks. All the testing sessions will be at the Red Cross office.

Not able to make it to a class? I have recently come across a set of self-study videos that should do a great job if used with the ARRL books. Ask me and I'll direct you. My email is K0RGR(AT)arrl.net.

1587. Upcoming Radio Classes

Yahoo group: rochester_hams
Date: 2014-01-13 15:32:37 UTC
From: <k0rgr@...>
Topic: 1587 Message: 1587

Here's another reminder of the upcoming radio classes in Rochester.

The Technician class is SUNDAY 1/26 and SAT 2/1 from 8-5.

The General class is MWFM 1/27,29,31, and 2/3 from 6-10 p.m..

We do have people that listen to our nets! I ot an email from a prospective
Tech class student who heard my announcement on the Sunday night net.

I just sent Bob a note to update the information on the web page, and I've registered it with ARRL.

1588. APRS for the masses

Yahoo group: rochester_hams
Date: 2014-01-28 20:47:26 UTC
From: <k0rgr@...>
Topic: 1588 Message: 1588

There was a writeup in the January QST about a new TNC from Mobilinkd. This is a very small device, smaller than a credit card, that plugs into your radio, and communicates with your intelligent devices via bluetooth. The TNC is $49 and the cables for different radios are a couple dollars each.

You need a smart device that has Bluetooth capability. I have an Android tablet with Bluetooth and an internal GPS. Using the app 'APRSdroid' you use the tablet's internal GPS, and the packets are sent wirelessly via Bluetooth to the TNC, which you can clip on the back of your HT. It won't work with Apple stuff, but apparently there are Windows and Linux apps that will work. I don't have a PC with Bluetooth, so I haven't had a chance to try those out.

I tried it with my old TMD700, whose internal TNC died ages ago, and it worked great. I tried it with my Wouxun radio, and it didn't work well. One guy here in town has a long TXDELAY on his packets, and I can copy him fine, but not the digipeater. I thought this was due to the squelch not opening fast enough on the Wouxun, and I still think that may be the case. Opening the squelch didn't help, so I suspect the TNC can't handle that condition, either.

But I tried it with my ICOM IC-80AD, which is also my DSTAR radio, and it works spectacularly well. APRSDroid gives you a pretty full function APRS application, you can send and receive APRS messages, and plot stations on Google maps if you have an Internet connection, or on a downloaded map if you are 'off the grid'.

The little TNC has a built in rechargeable battery which is supposed to run it a long time. You charge it from a USB port.

1593. February RARC Meeting

Yahoo group: rochester_hams
Date: 2014-02-05 19:56:56 UTC
From: John Somheil
Topic: 1593 Message: 1593

This month at the RARC, the epic:
So what do you want to do?
I dunno. What do you wanna do?
Eh, whatever you want is fine.

One of my jobs in the Air Force was training NCO for my office. Every week I had four hours to fill with training. Now this was really easy to plan when someone screwed up, we just train on whatever got screwed up. I also made the person who did the screwing up plan and run the training. Easy. The problem was the staff was sort of an all-star team, some of the best at their jobs in the entire Air Force and they rarely screwed up. So, every week I'd walk the building and have this conversation about a dozen times:
Me: "What would you like to cover in training?"
Them: "I dunno, whatever you want."

Then I'd have to brainstorm and plan something on my own. Now as I brainstorm and plan programs for the club I am feeling a little déjà vu. Please don't think I'm saying our fine members would have no input or even use the word 'dunno'. Rather I believe we're teeming with ideas, groundbreaking new ideas not just for programs but ways to recruit new members, raise funds, and better serve this fine community of amateur radio operators.

So the February Program is: 2014, What To Do, What To Do?

Bring your ideas for programs, what you'd like to see and even what you can present. We'll also discuss the direction of the club and maybe form a committee or two. That's happening February 11th at 6:30 PM, RCTC Heinz Center room HA-111. It'll be nutty.

Pretty cool Bill,
I'd be interested to know how long the battery lasts. Also, have you tried it with one of the super cheap HTs like Baofeng? It be pretty wild if we could put together a complete tracker with an old phone, $50 TNC, and $40 radio.
-John

Topic: 1588 Message: 1595

I haven't used it enough to really run the battery down, but I also haven't charged it for a while. I see I left the charging cable at home, so if the battery runs out on this trip, I will have our answer, but I haven't had it on very much on this charge.

I tried it with my Wouxun radio and it didn't work well. It seems to work very well with my ICOM IC-80 and my old TMD700. I haven't tried a Baofeng yet. I tried to use it a minute ago and the GPS in my Android couldn't find a satellite from this hotel room in Nebraska. I'll try it again from time to time on the trip,. That unit is K0RGR-5, I used it to send K0HZN a message via the digi the other day, so it was working then.

Barry, W6GFN, of the Red Cross is looking to sell his 'Go Kit' that he demo'ed at our club meeting last year.
He's asking $750, which I think is a major bargain. This should be of major interest to anyone who is a Red Cross comms volunteer because it includes radios for the Red Cross VHF and UHF frequencies:

"
Icom IC-706 MKIIG HF/Dual Band Transceiver

Vertex VX-2000 UHF Transceiver (Banded for Red Cross Frequencies

Vertex FTL-1011 VHF-Low Band Transceiver (Programmed with 47.42/47.50)

12V 25A Power Supply.

SignaLink Audio Interface

USB Extender (up to 100') for remote control of the Icom radio.

I would like to get $750 for the kit + actual shipping costs (if any)"

Contact Barry at his emailo address: baltman@beta-tech.us

1598. RARC

Yahoo group: rochester_hams
Date: 2014-02-14 12:37:07 UTC
From: Steve Wiebke
Topic: 1598 Message: 1598

We decided at the last RARC meeting to move the clubs diner social event from the last Friday of the month to the last Thursday of the month. This is to avoid the Friday night crowds that make parking a problem at Roosters. Another is people may leave the area on Fridays for weekend events, others could not make Fridays due to scheduling.

Bob can you update the web site to this new date, and put 5:30 as a start time please.

1600. Ham Dinner Tonight!

Yahoo group: rochester_hams
Date: 2014-02-27 20:44:29 UTC
From: <hamradio@...>
Topic: 1600 Message: 1600

W0STV wants me to remind everyone that today is the last Thursday of the month and it is time to meet at Rooster's for dinner. This is a "come when you are available" event that starts at 5:30 and runs until everyone leaves. We have a reserved table (#15, I think) and everyone is free to join. Steve says he will be coming as soon as he gets off of work, probably in the 6:00 to 6:30 time frame. I will try to be there at, or near, 5:30, so come and join me if you have time. Rooster's is located on the west side of of West Circle Drive across from Costco, near the Charter Cable office. They offer a variety of food.

I seriously hope we see this in the next six months as the man implies. I've seen a lot of third party 'vaporware' for DSTAR that's always in 'development' but not in production. Connect Systems is a somewhat bigger player, so we can hope...

Meanwhile, there's a way to do DSTAR text using a Raspberry Pi and any 9600-baud capable radio. This month's QST also has an article on a DSTAR data terminal with a microcontroller that works with a DSTAR radio.

From: <dcnaatz@...>
Topic: 1613 Message: 1613

Yes, the Rochester area 10 meter net is still active!
Please join us tonight at 8pm on 28.325 upper side band to check out your radio &/or antennas.
As most of you know, 10 has been HOT the past month or so. There is still a lot of good F skip
DX coming in today including good propagation across the US. If this eventually dies off we are
only a couple months away from the start of the spring/summer E skip season. Right now I am listening to Switzerland coming in S9 on 28.431 so get on and enjoy the fun!

Note: there is normally no net on weeks the RARC meets and I'm going to propose we don't hold the net
on Tues Ap 1 since there is Skywarn training that night. So this is our last net until Ap 15 tax day.

1619. How Can We Teach Kids

Yahoo group: rochester_hams
Date: 2014-04-22 13:51:50 UTC
From: <k0rgr@...>
Topic: 1619 Message: 1619

OK, I'm looking for ideas.

There are many reasons we don't see many kids getting into ham radio today. Chief among them is that since Generation 'X' came along, the kids have had very little unscripted free time. 'Helicopter Parents' are real, hovering over their brood, planning out their schedules for them, and driving them to all their soccer games, etc.. Also, the kids today do more homework than we ever would have put up with. My kids averaged 4 hours a night, and I think it's worse now.

As a result, they have very little time for hobbies, if any. Asking them to sit through 16 hours of class over two weekends, and then devote many hours of outside time to studying the material is just too much for most of them. If we spread it out into 10 weeks like we used to, though, the kids don't show up half the time - too many conflicts.

I'm trying to find a way to fit ham radio into a typical busy kid's schedule. I think the ultimate solution is an online self-paced study course. I don't have time to develop one, but I think there are enough resources out there already that what's needed is a guide to them. It would be nice to give the kids some hands-on opportunity, too.

I think I have a very full class starting this weekend. In fact, if everybody shows up, it's going to be very cozy in my new 'classroom'. We always have some that don't show and usually one or two we weren't expecting, so it could be anywhere from about 8 to a dozen, I think. I listed the classes with ARRL this year, and I think that's where a lot of them came from.

1620. Re: [rochester_hams] How Can We Teach Kids

From: Dave Naatz
Topic: 1619 Message: 1620

I think the best time to approach them is middle school. My son got his license at about age 10 before getting too busy with high school stuff (and still was busy even at that age with sports and school stuff), but did most of his non-Field Day operating around 10-14. I got my Novice about age 13.

If only we had a ham middle school teacher - during 7th grade shop class my teacher that happened to be a ham had a small station in the corner and he'd turn on the receiver occasionally during our project work times to some DX station. That was 1966 in a totally different world but had appeal to a few of our techy/geeky guys and the teacher let us tune around when we had a few spare minutes after a quick lunch. I don't know if we'd have the same appeal today but if we happened to have a teacher in the STEM middle school classes we could try. For one thing appealing to a few friends would be a big plus since it's very hard for any 12 year old to go out on their own. Even if Dad, Grampa or a close neighbor/relative gets the kid interested they need to stick with it and a buddy would help.

The online idea is good with smart phone capabilities. Good ideas Bill!

1621. Ironman Bike Ride Seeks Hams

Yahoo group: rochester_hams
Date: 2014-04-22 16:22:56 UTC
From: <k0rgr@...>
Topic: 1621 Message: 1621

This event is coming up Sunday for anyone who'd like to help. You can do March Of Dimes here on Saturday and Ironman on Sunday...

The 2014 Minnesota Ironman Bike Ride is this Sunday, April 27th, 2014. We are in need of ham radio volunteers to assist with SAG (Support and Gear) operations to provide communications back to Net Control. We are looking for approximately 3-5 ham radio operators along with possibly someone for a rest stop (must supply radio equipment). A mobile radio is provided for SAG wagons but you may want to bring an HT. This year the ride will take place at the Washington County Fairgrounds in Stillwater, MN. Ride will start between 6:30 - 7:30am. You can volunteer all day, half day. Ride usually is completed between 6:30PM. If your are interested in volunteering please drop an email to Jason Lind, KB0IOA. His email address is kb0ioa@aol.com mailto:kb0ioa@aol.com as positions may be filled before registering as a volunteer at the Ironman Volunteer Registration http://ironmanbikeride.org/basic-info/volunteer/ website.
If your would like more information about the ride please visit the Minnesota Ironman Bike Ride http://ironmanbikeride.org/ website.
If you do volunteer you will be invited to attend the volunteer banquet at Summit Brewery in St. Paul, MN on May 1st, 2014 for free food, Summit Brewery beverages and prizes.

Thanks,
Adam Bjorklund

The fault is gmail. They stupidly and frustratingly filter out any post you make so the email of poster does not see it. I switched to my charter address for that very reason. They forget that it is always possible the post never got there or more likely they do not care. Gmail has such excellent spam filtering that Zi use thrm as much as possible.

Date: 2014-04-23 20:08:25 UTC
From: <k0rgr@...>
Topic: 1625 Message: 1625

From Roger, KI0F:
I have a Icom 781 transceiver for sale. This unit was bought new by Fred Pfeiffer K0FP in Red Wing. The reason I own this unit now is I had to buy a package deal. My interest was in his Alpha 87a. Even though this unit was a $5000.00 flagship unit for Icom, I have no need for an third hf station . I would like to sell this unit locally as the weight is 23kg or about 50 lb. I have put it on the air both cw and ssb. It has all the extras built in. External speaker with audio filters SP_20. Desk mic. Voice synthesizer unit UT-36. CI-V level converter CT-17 for computer interface. Icom phone patch. Manual. This is a total package.
Bought from AES April 22 1994
Serial number 002995

I would like $900.00 for package. Prefer a local delivery.
Contact information.

1626. For Sale: Icom 703 HF transceiver

Yahoo group: rochester_hams
Date: 2014-04-28 19:53:03 UTC
From: <dcnaatz@...>
Topic: 1626 Message: 1626

I am going to sell my one owner Icom 703 QRP+ 160-10m transceiver. By QRP+ I mean it runs .1-5 watts on a standalone battery but in a car or home 13.8v DC power it puts out 10 watts. This is a great "back packer" QRP rig that has the same user interface as the famous Icom 706 but this unit also has:

- Built in auto antenna tuner
- Built in DSP noise reduction (and also noise blanker, IF shift)
- The optional 400hz CW filter added
- Upgraded to essentially an IC 703+ including 60 meters (but not 6 meters)

It will operate CW, SSB, AM, FM and of course digital modes with a PC. It has a mobile microphone and if you buy locally w/o shipping I'll add a fitted backpack and a new 12v 7ah sealed lead acid battery. I'm only selling it to get some cash for different ham related purchases; nothing wrong with it, never been more than picnic table portable operated. $525 takes all ($450 if you do not want the 400hz CW pluggable filter). Email me if you want a photo or to listen to it during a schedule k0vh@arrl.net. 73 Dave K0VH Rochester

The good news is that I had a total of 7 students in the Technician Class that just concluded.

The bad news is that for the first time, we didn't make it all the way through the material in the two Saturdays. I'm actually in shock - somehow, we spent twice as long on one chapter as we usually do, and we never made up for it. My new classroom is great, but it makes it too easy for me to say ' ... here I'll show you...' instead of ducking the question as I normally would.

So, I'm looking at other ideas. It looks like we may have larger classes again, since I've started listing them with ARRL, and that's how most of my recent students found us. Larger classes take more time to teach. So, I think I'm going to start by adding another half-day to the class, maybe a whole day.

But I'm still searching for a solution that will work for 'kids'. Online study would work well for most, and ARRL had one but it's apparently gone now.

I'm also thinking about offering two versions of the class. The first would be a very stripped down class, as short as possible, focused only on the subjects that they need to know for the test. I would not aim this at kids - there is just too much for them to absorb in that time.

The other class would be a more relaxed, longer class with lots more in-depth information and 'hands on' demonstrations.

It's that time of the year again and I am recruiting volunteers for the Med-City Marathon. I'm adding this list to my recruitment efforts since I currently have 12 signups on the web and would like to get around 20. I know some of the regulars can't make it this year so looking for some new (or returning) help.

The event is Sunday, May 25th (always the Sunday of Memorial Day weekend) and runs from 7:00 am until about 2:00 pm. The time slots can be as short as an hour to the whole event. The variability is in the water stops. We usually have someone at a stop from 15 minutes before the first runner until all are through. Earlier water stops are open a short time while later ones are open much longer. To sign up visit the RARC website: http://rarchams.org/publicservice/index.htm and select the sign-up link on the Med City marathon line. Feel free to sign up for other events too ;) If you are new to ham radio and are nervous, let me know and I can team you up with a veteran or walk through things before the event

The race starts in Byron (the wheelchairs, if any sign up, will leave 10-15 minutes before that). Here is my current plan, but it may change since the course will be slightly different this year and they don't have the water stops and exchange points maps on their website yet so can't see what might be doubled up.

   3x NCS (usually we have the EM-50 near the Mayo Civic Center)
   ~15x water stop and exchanges
   2x tail vehicle - usually a golf cart. A deep cycle battery and mobile rig and antenna are good here.
   1x shadow (maybe 2 or 3 if we have the resources)

You can contact me with any questions.

Med-City WebSite: http://www.medcitymarathon.com/ (Course Map is under Race Info -> Course)

Thanks.

Subject: Hi Pat
    Hi Pat ,
Hope all well ..

I took the trailer to a fel;low in the yellow pages that does sandblasting / welding / painting and he did an awesome job on all three ,, the arms now go to the center and the rods go right down thru the guides , and the bends in the frame that had the tower less than vert are gone .. it is a shiny aluminum , and with some lithium grease , the tower now collapses fully .. so it is in Bristol condition , as sailors say .

I wish to consider donating it back to the radio club as a mint condition tower / trailer (with lights installed) .. I will research the cost of a new unit of a trailer and crank up tower of some 50 ft ., I believe that sort of unit is nowadays some thouands of $$ .. and all I would need from the club is a letter of acceptance , and a value consistent with new units at this date ..

included would be

1. Tower / trailer
2. Yaesu Rotor g450 and 100 ft of cable with proper plugs installed
3. Three 100 ft rg-213 coaxes
4 . inv vee dipoles for 80 and for 40 M .
5 Pulleys for #4
6 . Cargo box for above ,
7. 4 sturdy 5 ft stakes
8 . Sledge for 37 .
9. plenty of ropes for guying
10 . several wooden blocks for the legs - pipes
11. lithium grease cans

12. Force 12 C-3SS 20 15 10 yagi with manual .. that antenna cooks !!

Please Will you run this offer by the powers that be ??

I would like the privilege of using it for personal adventures such that they do not interfere with club plans ..

73
Peter

Ron,

I've been out of town attending my youngest son's graduation and moving him from ND to IN so sorry for the delay in getting back to you.

Most water stops take all the extra help they can get so having two additional helpers is a great idea. I would tell the person in charge of the water stop that you have some additional helpers and see where they fit in.

I looked and I have another person besides you sign up since I worked on the spreadsheet before leaving town and will try and get it updated when I have a few minutes tomorrow. Looks for updates tomorrow, but the spreadsheet can be found at https://docs.google.com/spreadsheets/d/1coRqswmwjPggVCsVMRl8xVmpkhNkb9BopZnxv4_0xpA/edit?usp=sharing

There is a link on the spreadsheet which will get you a 11 or so page PDF that has the various stops, course marshals, etc.

Any questions let me know.

1639. W0IBM Club Items for Sale

Yahoo group: rochester_hams
Date: 2014-05-21 18:42:13 UTC
From: Kevin Adler
Topic: 1639 Message: 1639

The W0IBM Radio Club is selling off some of our equipment to fund upgrades of our club station.

We're trying to consolidate down to one operating station that can operate everything instead of having 5 disparate operating stations. We're also trying to get a newer radio that can be remotely operated by club members (especially for retirees, since they can no longer get in to the building without an escort).

Feel free to email me (Kevin Adler, ac0ta@...) to purchase or for more information on any of the listings. I'm working on getting pictures up, but they're not available yet.

Prices should be fairly reasonable, but offers may be accepted.

Good note and attachment. Wow, we got lotsa stuff! I asked my IBM Tucson retiree friend if he could think of problems eventually showing what's left on ibmhams yahoo group, obviously limiting sales to US IBMers only.

We should also perhaps forward your note to some former Rochester hams that operated W0IBM but no longer live here. Guys that are regulars to our Sat 20m net like Bob W0RY and John W0CJ are living in antenna restricted retiree housing so they may not have good ways to use the radios, but some like former VP Larry Loen WO0Z (he got many contacts for the DXCC and got the club ARRL certified) might.
There are other hams like former sec Tom Adams not real active in HR but still in Rochester I doubt are on rochhams.
Perhaps Charlie has records back a few years and might think of some too.
Just a thought, 73

From: k0rgr@...
Topic: 1641 Message: 1641

I sent out a note to my students for the last three years, trying to drum up some operators for the 'Get On The Air' (GOTA) station for Field Day this year. So far, no takers.

This year, I'm trying to schedule operators in advance of Field Day, so we don't have the familiar issue of everybody showing up at the same time to operate GOTA. I have created a schedule sheet, which you can see here - there are no entries yet. GOTA_shift_schedule.xls - Google Drive
https://drive.google.com/file/d/0B5MX-4lhbqSZRl9tcTBwM3dpUTg/edit?usp=sharing Please check the link, and send me a note with an idea of when you'd like to operate, and I'll add it to the calendar.

From: Kevin Adler
Topic: 1645 Message: 1645

I'm looking to buy a Kenwood TS-2000 and sell my Yaesu FT-897. I was wondering if anyone had one they were interested in selling or trading for. I'd ideally like it before the June VHF contest.

From: Kevin Adler
Topic: 1639 Message: 1647

Unfortunately, it looks like we still have some things to sort out with IBM Club before we can sell these things, so we're postponing the sale. I'll post out another message to the group when everything gets worked out.

Sorry, for all those that wanted to purchase any of these items.

From: johnne507@...
Topic: 1660 Message: 1660

Hi All,

My wife (a long-time Mayo employee) and I (semi-, nearly almost-retired) will be relocating to Rochester after many years at both the Arizona and Jacksonville Mayo facilities so I hope you'll pardon my lack of knowledge.

I will want to set-up a shack (of course) when we are settled. So...

What kind of tower/antenna restrictions exist?

I have reviewed both the Olmsted County and the Rochester City codes and I didn't see any comment that directly mentions antennas/towers. I did see a mention of interference that seems to exempt hams who are exercising good engineering practices within our bands. I'd greatly appreciate any information and advice.

Thanks

Now, if you have a General or higher license, you get credit for Element 3 (and 4 if you had an Extra) for life. But if your license expires and you don't renew it, you need to take Element 2 - the Technician. I think this eliminates a weird quirk in the rules, where someone with an expired Technician from prior to 1987 got credit for the General, but former holders of the General or higher licenses did not. At least if you get your Extra, you should never have to do it all over again, but you will have to demonstrate that you can pass the entry level.

They also made some other changes. No word on the maximum bandwidth for HF digital proposal yet.

Good morning.

I am selling for a friend, two TH-F5 2-meter HT's by TYT. Both are like brand new and in boxes. One of them has never been used!

One is $50.00 and one is $60.00. The $60.00 unit comes with a spare battery.

Reading from the box, "...FM Radio, can store up to 25 radio stations. Wide/narrow bandwidth selective. Power on password protection. Scrambler." Also stated ion the box, "...CTCSS/DCS. VOX function. Channel name setting. 125 memory channels".

I personally own the same radio and use it as a spare, or backup HT. For the price they are a great little radio!

Contact me via EMAIL if interested.

Thanks!

1665. Notes from RARC field day planning meeting last night

Yahoo group: rochester_hams
Date: 2014-06-11 15:30:39 UTC
From: Grant Kesselring
Topic: 1665 Message: 1665

Hi Folks,

Thanks to all who attended and participated in the great Field Day planning discussion last night at the RARC meeting. I jotted down some notes from that discussion and included them below. Send me an email with any additions or corrections.

BTW, we still have the need for some additional shelters. We are looking for any camper, RV, portable enclosure with hard sides, etc that would be large enough to fit a small desk and chairs for operating. Please speak up if you have something that we could borrow for the weekend. We can arrange for pickup and return if that is a concern.

Also, as soon as possible we want to establish what laptop computers will be used for each of the logging stations. The computers need to be capable of running logging software, interfacing with rig/cw, and being networked. Contact me and cc Kevin Adler if you have a laptop that would work.

Meeting Notes from 6/10/14:
- W0SA's tower will be available with rotor, beam, coax, etc. It is already at Pat's place.
- ARES trailer will likely not be available, but the generator, tent, and Icom 9000 that is stored in the trailer will be available. KC0FOW will bring the tent, gen and rig.
- K0RGR is the focal point for satellite contacts. There are currently four satellites.
- AB0BW to bring his 9KW generator. If pressed into use, any overruns in the gas budget will be covered by donations.
- Lowband antennas: AB0BW to bring a G5RV. Also, many assorted fan dipoles are stored in the black trailer. W0STV to coordinate with Pat to deliver trailer to the farm asap. At that time we will inventory the antenna situation in the trailer and also do a site survey.
- K0VH to bring a 1KW tuner
- K0RGR to bring an IC-7000 rig for satellite contacts
- AC0TA to bring the IBM club antenna analyzer
- N0MGY to bring 200' LMR400 coax as backup.

- NR0N has an MFJ tuner the club can have. He thinks it handles open wire line. Email: chrisope@...

- Grant to post Talk-in Frequency information on website.

- W0LLN volunteered to handle sanitation reservations including arranging dropoff/pickup.

73,
Grant

From: k0rgr@...
Topic: 1667 Message: 1667

It occurred to me the other night that we have been looking for opportunities to get involved with schools in the area for some time. Right here in Rochester, we have the only charter school dedicated to 'STEM' - Science, Technology, Engineering and Math. That would seem to be an ideal place.

http://rochesterstemacademy.org/Home-Page.php
http://rochesterstemacademy.org/Home-Page.php

Is anyone interested in contacting them to see if they would be interested in working with the radio club on things like working the ISS? We have a couple ham satellites in orbit right now dedicated to STEM education, so that might be a place to start. But the whole spectrum of wireless communication ought to be of some interest.

[Attachment(s) from sbjohnston@... [MadisonAmateurRadio] included below]

Capital City Ham Radio Summer Swapmeet Sunday, August 10 7 AM - 1 PM.

Madison, Wisconsin

Location: McGaw Park, 5236 Lacy Road, Fitchburg.

FREE admission to everyone - vendors pay $15 per space. No reservations, first come first served.

This will be afun summertime event for
amateur radio and electronics hobbyists... Get together, sell excess
equipment, see friends, buy gear and parts you need, see folks you've
met on the air, even have a picnic if you like.

Everyone should use the park entrance on Lacy Road. Buyers should park
in the lower lot as indicated by the signs. If you are selling, pull
your car into the upper lot, pay your fee, and display your wares.

73 - looking forward to seeing you at the Capital City Hamfest Summer Swapmeet!

1670. ARES Deployment in Northern MN

Yahoo group: rochester_hams
Date: 2014-06-16 20:05:38 UTC
From: k0rgr@...
Topic: 1670 Message: 1670

We have reports that ARES is deployed to help with communications issues due to flooding in Koochiching County, and similar issues may exist in St. Louis County.

If they run out of ARES resources there, they will seek help from neighboring counties and counties in their district. But, if that is not sufficient, our SEC may ask for volunteers from District 1 and District 4 (SE MN and Metro).

I think it's also likely we could see some action to our west - there are flash flood watches out for the counties on I-35 north to Faribault and east into Wisconsin from there. Severe weather is anticipated in SW MN, and we're supposed to get a lot of rain, too.

So, make sure your 'go kit' is up to snuff and your powder is dry. Field Day could be early this year.

This is a reminder that the Field Day Dinner is a potluck. We will be looking to eat around 6:30pm this year as the lunch will be before 12pm. Anyone looking to help with food, please drop me a line, or respond here, so we can figure out who is bringing what.

Also, we need to cover breakfast this year. It should be around 8am and was told something about Bacon, Eggs, Muffins, OJ and lots of coffee! Again, anyone willing to help with food, please let me know so we know what we have.

As far as drinks go, I will be bringing out 5-6 flats (24 20oz bottles) of water like was done last year. Other than that, we will need coolers, ice, and other donations of soda or refreshments (plus possibly snacks if so inclined).

Dan, N0KZO

1673. Field Day Food

Yahoo group: rochester_hams

Dave, K0VH, is bringing a cooler and I am also. He also said the following:

"Breakfast (could be as cheap & simple as pancakes and syrup) and almost as important something for a Sunday lunch (couple loaves of bread with big pack of both meat and cheese) which is critical being so far away from town and if we expect people to stick around and help with tear down. If we need to "pass the hat" for those meals we can, Sat night should be a big potluck and our main event"

So more ideas for people. Let's keep it going!

My wife says she'll drive out for Saturday dinner, so we'll bring a hamburger casserole, plus maybe a cake or something too. And a smallish cooler with whatever.

In the past I've had Otto's pastries for breakfast -- I get them on the way out on Saturday, so they're not perfectly fresh, but good anyway.

By the way, the portapotty is $50 cheaper than budgeted, so there's a bit extra money for food if someone can arrange it.

Hi,

I’m looking to sell the attached Drake TR7. As far as I know everything on it operational. I would like $350 o.b.o. Thank you.

Eric - KC0RSC

HI Dan
I could drop off a stick or two of deer sausage that you can have for snacking at field day if you are interested. I would be giving it to you as I will out of town in a wedding this coming weekend. I am going to miss field day it is always fun.

Ok, so here is an update on the food situation for this weekend.

Saturday lunch (11:30am) -
N0KZO - Pizza from Papa John's

Saturday Dinner (6:30pm) - Potluck
W0LLN - Hamburger Casserole (possible cake)
N0KZO - Providing a Gas Grill for cooking if needed

Still need (ideas): Chips, condiments, brats, burgers, buns, salads, desserts
(Could just make this a cookout! Grab a pack of dogs, burgers or brats and buns before heading out.)

Sunday Breakfast (8:00am) - (Suggestion was made about pancakes w/syurp)
W0LLN - Pasteries from Otto's (?) (which have always been tastie)

Sunday Lunch (1:00pm) - (Suggestion was made about lunch meat & dinner rolls for the teardown crew)

Throughout the duration - Snacks & Drinks

N0KZO - 1 Cooler w/ice + 120 20oz bottles of water
K0VH - 1 Cooler w/ice + 12pk of drink + Cookies
KD0ORO - Couple sticks of Deer Sausage
NZ0S - Cooler w/ice + bottled water + couple 12pk soda

Still need more coolers w/ice, snacks & drinks!!!!

Please help us fill in the gaps. If you want to help but wont be there (Like KD0ORO) we can arrange a pickup or drop-off of supplies with other members.

Dan

I think lunch should start on or after 1pm on Saturday.

In the past, we've always been scrambling to get on the air by the start of the contest. Bringing in food when we need all hands on deck to get things set up is just counter productive.

Maybe we're just trying to be optimistic in thinking we'll have everything set up by 11:30, but I'd say let's not repeat past mistakes. If and when we consistently get things set up by 11:30, then we could move lunch earlier.

It was discussed a couple months ago and decided that earlier would be
better than in years past where we did it between 12-1pm. The thought
is get it out of the way, while still leaving time to get things done
between lunch and start since if we do it after start, first operators
will not get any, plus we "could" start to have visitors and would like
to be in full swing showing our "good" side, not just standing and eating.

Ok, so here is an updated list on the food situation for this weekend as of 4:30pm Thursday. We need a couple people to volunteer/donate things for Sunday lunch for the teardown crews please.

Saturday lunch (11:30am) - Pizza
N0KZO - Pizza from Papa John's

Saturday Dinner (6:30pm) - Potluck

W0LLN - Hamburger Casserole (possible cake)
N0KZO - Providing a Gas Grill for cooking
KC0FOW - Hot Dogs & Burgers (plus some buns)
K0RGR - Buns (TBD) + Chips
KC0CJP - Several bags of chips
K0VH - Cupcakes (2 dozen)
AB0BW - Couple bags of chips

Still needed: condiments, desserts (?)

Sunday Breakfast (8:00am) -

W0LLN - Pasteries from Otto's (?) (which have always been tasty)

Sunday Lunch (1:00pm) - (Suggestion was made about lunch meat & dinner rolls for the teardown crew)

Throughout the duration - Snacks & Drinks

N0KZO - 1 Cooler w/ice + 120 20oz bottles of water + Plates & napkins
K0VH - 1 Cooler w/ice + 12pk of drink
KD0ORO - Couple sticks of Deer Sausage
NZ0S - Cooler w/ice + bottled water + couple 12pk soda
KC0CJP - Cooler w/"a few 12 pk of pop"

Still need more coolers w/ice!!
REMINDER TO MARK YOUR THINGS WITH YOUR CALLSIGN AND NAME SO WE KNOW WHOSE IS WHOSE!!!!!
Please help us fill in the gaps. If you want to help but wont be there (Like KD0ORO) we can arrange a pickup or drop-off of supplies with other members.

From: kesselg@...
Topic: 1676 Message: 1688

Hi folks,

We are less than 48 hours away from Field Day! Are you ready? With very little time remaining we have MANY (too many) time slots still to be filled on the operating schedule. There are many opportunities to operate voice, cw and digital modes. If you were waiting until the last minute to sign up, the time is NOW! Please go to the link and indicate your time/mode preferences on the spreadsheet or send me an email. If you are already on the schedule but feel like doing more operating, let me know that as well.

Let's do this!

73,
Grant
PS, do not pay attention to the weekend weather forecast. It's going to be sunny and 75 the entire time.

If we still need another cooler, I can bring one with ice.

I'm suggesting burgers for Sunday teardown, since we already have the grill there. I can bring burgers and buns as well.

Ok, so here is an updated list on the food situation for this weekend as of 10:00pm Friday. We need condiments for Saturday burgers and Sunday's sandwiches.

Saturday lunch (11:30am) - Pizza

N0KZO - Pizza from Papa John's

Saturday Dinner (6:30pm) - Potluck

W0LLN - Hamburger Casserole (possible cake)
N0KZO - Providing a Gas Grill for cooking
KC0FOW - Hot Dogs & Burgers (plus some buns)
K0RGR - Buns (TBD) + Chips
KC0CJP - Several bags of chips
K0VH - Cupcakes (2 dozen)
AB0BW - Couple bags of chips

Still needed: condiments

Sunday Breakfast (8:00am) -

W0LLN - Pasteries from Otto's (?) (which have always been tasty)

Sunday Lunch (1:00pm) - (Suggestion was made about lunch meat & dinner rolls for the teardown crew)

K0OMI - Deli Meat & Cheese for sandwiches

Throughout the duration - Snacks & Drinks

N0KZO - 1 Cooler w/ice + 120 20oz bottles of water + Plates & napkins
K0VH - 1 Cooler w/ice + 12pk of drink
KD0ORO - Couple sticks of Deer Sausage
NZ0S - Cooler w/ice + bottled water + couple 12pk soda
KC0CJP - Cooler w/"a few 12 pk of pop"
AC0TA - Cooler w/ice

REMINDER TO MARK YOUR THINGS WITH YOUR CALLSIGN AND NAME SO WE KNOW WHOSE IS WHOSE!!!!!

Please help us fill in the gaps. If you want to help but wont be there (Like KD0ORO) we can arrange a pickup or drop-off of supplies with other members.

1694. Radio Classes

Yahoo group: rochester_hams
Date: 2014-07-03 20:17:13 UTC
From: k0rgr@...
Topic: 42 Message: 1694

Time to drum up business for my upcoming classes. I think I have two 'live ones' for the Tech class, but I would certainly like to have more. The class starts on Saturday July 26th and runs for two consecutive Saturdays. It's important that students get the book and start reading as soon as they can. I had a full classroom for the last class, and it would be nice to see that again.

I'm also doing a General Class the last week of July, first week of August. So far, no takers for that one.

1697. KØM Information and Sign Up

Yahoo group: rochester_hams
Date: 2014-07-09 16:25:11 UTC
From: Niel - W0VLZ
Topic: 1697 Message: 1697

The K?M information on the club homepage at http://www.rarchams.org/ has now been updated with a link to an on-line sign up sheet. When we are not operating at the KOA Campground (thanks Roger and Barb) sign up to operate using your own rig. There are no contest type frequency/mode/power/exchange requirements but if you have specific plans note them on the sign up "sheet".

73,
Niel - W?VLZ

Ooops I replied to the wrong place. The next General Class starts July 21st, and runs Tuesdays and Thursdays from 6 to 10 p.m. for two weeks. We may need to go slightly beyond 10, based on the last time I gave the class. You'll need the ARRL General Class License Manual - let me know if that's a problem. Classes will be at my house, 2439 Meadow HIlls Dr. SW, and we'll have some kind of snacks/food/beverages available.

So far, I don't have any firm takers for the Tech Class which is scheduled to start Saturday the 26th, but the General Class is getting more interest lately. I have room for 9 or 10 in the room and it's not half full yet.

1702. Public Service Events

Yahoo group: rochester_hams
Date: 2014-07-15 19:17:28 UTC
From: k0rgr@...
Topic: 1702 Message: 1702

I just added a bunch of public service opportunities on the District 1 calendar on the minnesotaares web site.

http://www.minnesotaares.org/index.php?option=com_content&view=article&id=73&Itemid=11
http://www.minnesotaares.org/index.php?option=com_content&view=article&id=73&Itemid=11

A recent QST column advised us to start using 'public service' to describe what we do, instead of 'EMCOMM', because ARES is much more than just emergency communications. We want to be of service in non-emergency events, too.

With the addition of the these events, some of which are outside District 1, but near by, there is an opportunity to volunteer almost every weekend. These events are great practice for those situations we hope we don't have to deal with.

Time to put some mileage on those radios! See the website, and click on the event to view details and contact information.

1703. FT-897 for sale

Yahoo group: rochester_hams
Date: 2014-07-18 02:19:26 UTC
From: Kevin Adler
Topic: 1703 Message: 1703

I bought a TS-2000X and have no more need for my existing FT-897. Includes hand mic, manual, and power cable. Been working great - it won me state and section in the June 2013 VHF contest.

I'm asking $800 or best offer. My friend is taking it to the Sioux Falls Hamfest on Saturday, so if you want it, I need to know before then.

1704. CQ the 10 meter net Tue 8pm

Yahoo group: rochester_hams
Date: 2014-07-22 15:03:20 UTC
From: dcnaatz@...
Topic: 1704 Message: 1704

I wrote another message an hour ago and it has not showed.
Sorry if you get two but topics have shown up a day late on this forum before, will make this shorter.

The Rochester 10 meter net will meet tonight at 8pm on 28.325 upper side band.
I'll put out a CQ for at least 5 minutes so if the heat/bugs has got to you and you have a cool shack check out your HF rig for a change. 73 de Dave K0VH

1708. Picnic table Canopy?

Yahoo group: rochester_hams
Date: 2014-08-06 15:41:49 UTC
From: Niel - W0VLZ
Topic: 1708 Message: 1708

Our K?M operating position at the KOA Campground could use some shade and/or protection for rain. Does anyone have a canopy of some sort we could borrow that will fit over a full size picnic table?

Thanks and 73,
Niel - W0VLZ

1709. ICOM 703 QRP+ xcvr for sale

Yahoo group: rochester_hams
Date: 2014-08-06 22:55:53 UTC
From: dcnaatz@...
Topic: 1709 Message: 1709

I am going to sell my one owner Icom 703 QRP+ 160-10m transceiver. By QRP+ I mean it runs .1 - 5 watts on a standalone battery but in a car or home 13.8v DC power it puts out 10 watts. This is a great "back packer" QRP rig that has the same user interface as the famous Icom 706 but this unit also has:
- Built in auto antenna tuner, great feature for multiband or 4:1 balun antennas
- Built in DSP noise reduction (and also noise blanker, IF shift)
- The optional 400hz CW filter added
- Upgraded to essentially an IC 703+ including 60 meters (but -not- 6 meters)
It will operate CW, SSB, AM, FM and of course digital modes with a PC. It has a mobile microphone and if you buy locally w/o shipping I'll add a fitted backpack and a newer 12v 7ah sealed lead acid battery. I'm only selling it to get some cash for different ham related purchases; nothing wrong with it, never been more than picnic table portable operated. $500 takes all ($450 if you do not want the 400hz CW internal filter). Email me if you want a photo or to listen to it during a schedule. IF YOU ARE GOING TO THE RARC PICNIC TUE Aug 12 I will bring it there to show.
This is my last posting for a local sale, after Aug 18 it goes on eham, qrz, etc nat'l media.
k0vh@arrl.net 73 Dave K0VH Rochester

Everyone,

The attached file contains the remaining equipment available from WB0SOK’s radio shack. Feel free to make purchases for yourself and your friends.

If interested in any item, please email Stew Lewis. Earliest timestamp with a commitment to buy, determines who purchased the item.
Yet to do: Take down the Rohn 25 tower, rotor, and antennas.

Stew will be going over to Ron’s house after breakfast this coming Saturday (Aug 9th), about 9:30AM to pick up purchases and browse around the tables containing the equipment. Other time frames will be considered, please contact Stew.

Stew is the only one available to let you in at 9:30 AM this Saturday to complete your purchases. Please respect Betty’s privacy.

Ron’s address:
616 CHESTNUT ST
MANTORVILLE, MN 55955-6116

The asking prices have some wiggle room, just make your offer known to Stew.

We are NOT set up to ship any of these items, please make arrangements if you are not able to pick these items up yourself.

Thanks,

Terry, W0VB

I'll bring a veggie salad, and the small charcoal grill John lists for me.

I'll get there a bit early and set up the K0M station.

On Saturday, June 21, 2014 9:31 PM, Scott Wright <drscott.wright@gmail.com> wrote:

Steve and Fred

I visited Electronix servicing today in Brooklyn Park, MN. It is owned and operated by Gary Grinva, K0GX. He has a test bench and electronics shop better than Burghardt's in South Dakota. He can repair all kinds of radios, amplifiers and other ham radio devices.

I also have found him to be half the rate of the Icom service center or even less plus you can reduce your shipping charges by taking the stuff up to him.

He has my endorsement as you look for places to get things repaired!

1734. Grant Proposals

Yahoo group: rochester_hams
Date: 2014-09-10 18:37:19 UTC
From: k0rgr@...
Topic: 1734 Message: 1734

I intended to write some proposals for the things we discussed at the meeting last night, but before I can do that, I need some information.

First, for the Red Cross HF radio proposal, K0VH mentioned that we might be able to use the SB1400, tuner and power supply for this project. If so, that would really eliminate the need for any grant money, because all that's needed is an antenna, coax, and digital interface, and those can be done for under $200, tops. I need to know if the back panel of the SB1400 looks like the FT747 that it's based on. Does it have a separate jack for audio out? If so, I can see this working out. If not, then not so much. I think this antenna might be a working solution for the ARC office - we'd need to run a wire from the top of the tower down to the crest of the front of the roof - that should work on all bands.

KØOMI mentioned to me last night that he might have a site in Grand Meadow where we could put 'something'. I was talking about my idea of putting a Kenwood TMV71A at the Courthouse in Mantorville that we could use as a remotely controlled crossband repeater. During SKYWARN, the Dodge County hams could use it to get into our .255 repeater from the western end of Dodge County, and in other events, Rochester could use it to talk to remote repeaters in Owatonna, Faribault, and probably Albert Lea.

However, we've also been discussing the idea of adding remote receivers to the 146.82 repeater, to help deal with some of the receive issues we've had there for years. KØRPD has an older Motorola receiver Voting Unit that we might be able to use. The repeater controller on the .82 has support for a remote base, which I believe we could use for this. You take the audio and carrier operated relay (COR) from the repeater receiver and up to three other receivers, and feed them into the voter. Then the voter picks the strongest signal, and gives you audio and COR out back to the repeater transmitter.

We would need remote locations for the remote receivers, and link radios back the .82 site. We also need a way to get the RF from the link radios back into the repeater room. There are a couple ways this might be done. I believe KØRPD has some surplus 900 MHz radios that might work for this. I'm thinking the Grand Meadow site and Mantorville would be great places. Then, we could look for a place in east Rochester or a higher level site further east. I guess we could start with one and see how it works. The remote sites can move around, unlike the main repeater.

Anyway, let me know what you're thinking before I write all of this up.

Thanks

1736. 10 is open! Let's do a net tonite @ 8pm

Yahoo group: rochester_hams
Date: 2014-09-30 16:03:53 UTC
From: dcnaatz@...
Topic: 1736 Message: 1736

Contrary to some , the Rochester SE MN 10 meter net still exists, occasionally at least! Let's meet tonight at 8 pm on 28.325 +/- a few khz upper side band. The reason for the +/- is there have been some 5s chatting the past couple months on that frequency so we can move a bit if needed.

Better yet, even if you cannot make the net do check the 10 meter band now that the Fall better propagation season has arrived. This may be one of the last "hot ones" for good propagation. I've been out of town for a bit so may have missed some of this, but it's fair this morning having heard a bunch of CA & AZ stations then having an OA4 come back to my barefoot CQ and now copying Spain, Hungary and S Africa on SSB. Lots of psk31 on 28.120 plus W1AW/5 NM +30db on CW.

1754. November Sweepstakes SSB This Weekend

Yahoo group: rochester_hams
Date: 2014-11-11 23:50:57 UTC
From: k0rgr@...
Topic: 1754 Message: 1754

Here's a chance to get on the bands and create some fun. It's not like Field Day - in this one, you have to pass a meaningful 'exchange' message, and that can be quite challenging.

For Techs, 10 meters is open, and the forecast is for it to improve this week.

I'm spoken for Saturday, but on Sunday, I can open up the classroom if anybody wants to drop in and spend a few hours giving out the rare 'MN' section in the SS contest. New hams, in particular - he's a chance to get on 10 meters and rub elbows with the 'big guns'.

Drop me an email if you plan to come by.

Thanks
K0RGR

1755. Social event.

From: Steve Wiebke
Topic: 1755 Message: 1755

We discussed this at the meeting. For the next two months the RARC social will be at Wild Wood bar and grill at 1517-1/2, 16th street SW. This is on the north side of the Ramada hotel. There is parking on both sides of the Ramada to access the Wild Wood.

Due to the last Thursdays of the next two months being on holidays. Novembers date is the 20th and December is the 18th. Reservations are made for 5:30 PM for both dates.

Reminders will be sent out before the events.

1758. 2015 Class Schedule

Yahoo group: rochester_hams
Date: 2014-11-20 21:38:18 UTC
From: k0rgr@...
Topic: 1758 Message: 1758

Here's what I'm planning for 2015 classes -

Instead of running the Tech as two very full days, I'll split the class into three days. This will give us much
more time to cover the material, and hopefully time to do more demos during the class, and make it a bit easier for the students to absorb it all. I'm hoping this makes the class easier for teenagers, too.

Technician - Jan 17,24,21
April 18,25,May 2
July 18,25,Aug 1
Oct 17, 24,31

The General Class will likewise be split into three weeks of sessions on Monday and Wednesday nights, three hours a night instead of four.

General - Jan 12,14,19,21,26,28
July 13,15,20,22,27,29

Is anybody interested in constructing demos for the class? I can provide antennas and power.

1761. Arlidazzle Parade Needs Volunteers

Yahoo group: rochester_hams
Date: 2014-11-30 14:18:30 UTC
From: k0rgr@...
Topic: 1761 Message: 1761

Hello Everyone:

We are now less than a week away and we are still short roughly 10 or so operators as my goal is to have 30 - 35 operators as the parade course is now 5 blocks longer and we have to support a 2 person Police Force for a town that is going to grow from 3500 to almost 10,000 people.

Here are the GOOD things about helping out next week for the ARLIDAZZLE Parade.
* All RADIO OPERATORS get a free SUPPER for helping out after the parade.
* The current weather forecast is out for next week, and Saturday is looking to have highs above Freezing -- So much better than -15 below like last year
* We will have control of the whole main street, and only report to the APD Chief only -- Gotta love serving only one agency.
* All Radio Operations will be based out of the Arlington APD Conference Room
* The whole event will use UHF Radio Comms

So, please check your calendars and see if you can come out and support this great 100+ Parade and in turn leave with a since of accomplishment and pride in knowing AMATEUR Radio was used, appreciated and executed without any issues.

Thank you all for the support and if anyone has any questions or concerns, please reach out to me at any the contact info listed below.

1767. CQ the Rochester 10m net Tues 8pm 28.325

Yahoo group: rochester_hams
Date: 2014-12-16 16:07:32 UTC
From: dcnaatz@...
Topic: 1767 Message: 1767

I'm going to propose we have a 10m roundtable net tonight at 8pm on 28.325 and then take the holiday week(s) off, either until Dec 30 or Jan 6. We have a great topic for tonight: who's been on 10m the past few days either the contest weekend or even yesterday enjoying some fairly good conditions, I'd give them a B.
I was on the contest Sat morning for an hour before getting busy the rest of the day then a few hours more Sun afternoon and heard some locals on SSB. I think 2013 contest conditions were better than this past weekend and Dec 2011 probably the best in the past 10 years.
What was ironic was while sending in my log Monday afternoon I had the radio on listening to a New Zealand station S7, since I did not find any ZLs on Sunday afternoon SSB.

Who's been on 10m lately, lets talk at 8pm? 73 Dave K0VH

From: k0rgr@...
Topic: 1783 Message: 1783

received this from KI0F in Wabasha County this morning -

Hi ARES Group: The past few years I have helped with communications involving the Ultra Marathon run down in the Zumbro River Bottoms. This is a very extensive and enduring event. this race is three races in one. They start off with the 100 milers at 8:00 am on Friday April 10th and ends around 5:00 pm Saturday. The 50 mile race starts at 12:01 Saturday (midnight). Last race starts at 9:00 am Saturday morning and that is one loop 17 miles. There are a lot of runners from all over the United States. Russ N0QK has a crew working this race the past few years from start to finish. That is a lot of effort and this year would like to have a crew replace him. I am looking for help in providing communications from a remote aid station along this 17 mile route. If I could get help from early Saturday to the end around 5:00 pm would be great. Scott K0CID said he would have a shelter for us as Russ will be leaving with this mobile shelter Saturday morning.

This race is run without interruption. Weather has been bad in the past and they still run. Our job is reporting bib numbers as they pass through our aid station back to net control at the start finish line. There they have a large monitor with all numbers when the arrive at the different aid stations. There are many miles between aid stations and with the this type race some of the runners get disorientated and can get lost. Ham radio is the only means of communication down in the bottoms. Cell coverage is out. The main link of communications is through the Wabasha repeater.

I really need help on this one folks. Any help on Saturday would be greatly appreciated. I am going to include a link and from there you will find the map for the route. I will be at aid station 1/4 at the Spooner bridge. Come on out on Saturday and watch folks run up and down these hills for 100 miles. Interesting folks.

The National Highway Institute has available a new web-based National Traffic Incident Management Responder Training http://www.nhi.fhwa.dot.gov/training/course_search.aspx?tab=0&key=133126&sf=0&course_no=133126, free for all first responders. The training is 4 hours long and covers many of the Traffic Incident Management (TIM) procedures, including:

- TIM fundamentals and terminology;
- Safe vehicle positioning, traffic management, and scene safety;
- Command responsibilities;
- Clearance and termination.

Accident scenes cause congestion and can bring a secondary crash, which endangers the lives of first responders. Recent incidents in Pennsylvania and South Carolina show how deadly highway response is. The longer responders are on the scene, the greater the risk they face. Faster and better response helps limit secondary accident risks.

The Emergency Responder Safety Institute also provides assistance for first responders to help them be better prepared for accident scenes and highway operations. Resources include information on high visibility PPE and vehicle markings, sample SOPs/SOGs, training, data on “struck by” incidents and line of duty deaths, and education materials.

This will be something to play with for our Thursday night nets. Using MT63, anybody with an Android device and an HT should be able to send formatted messages.

Here's a reminder about upcoming digital nets in the area.

On Thursday night, at 6:30, there is a digital net on the 147.255 repeater (PL100). We are using MT63/2KL protocol. Most of us use FLDIGI and the rest of the NBEMS suite of programs, all of which are free. MT63 is a very forgiving mode. You can do MT63 on VHF without a soundcard modem - 'acoustic coupling' works fine - meaning you can hold your HT up to the mic on your computer and copy it very well, and do the reverse to transmit.

Also on Thursday at 8 p..m., we have the SE MN Digital ARES Net on 3583.5 USB dial frequency,
about 1200 on the waterfall, using the Olivia 8/500 protocol.

Starting this week, I intend to do some experimenting prior to the 8 p.m. net on the 60 meter band. I will call the net at approx. 7:45 on 5373. This is 5371.5 USB and 1500 on the waterfall, to put us in the center of the channel. I would like reception reports as well as checkins.

I hope to see you all Thursday
73 de KØRGR

Here's an update from Roger, KI0F, on the need for operators for the upcoming event in Wabasha.

Please contact Russ, N0QK or Roger if you can help them out, even for a few hours.

Hi Race Fans: This is a follow up from my first mailings sent yesterday. As things stay the same, they can change on a moments notice as you may have found out working a disaster in the past. The first shift crew at aid station 1 and 4 has had a reduction of operators. With that said, it means we need help on all shifts as personnel will be shifting to cover the entire race. Russ N0QK has sent out his email using your address to finalize the spreadsheet for all shifts. Russ has now stated that he will stay the entire race. That means, Russ will be setting up Thursday night and work the entire race till Saturday 5:00 pm. That will put a tremendous load on his reduced team. I am asking each one of you that have stated you want to help, to contact Russ indicating what time you can lend to the event. Even if a few hours would help greatly. Here is Russ’s email if you don’t already have it rmarsole@luminet.net mailto:rmarsole@luminet.net His call is N0QK.

With that said, Russ has been doing this race for a few years along with the big dog sled race in Northern MN the past many years. He as some advice on what to prepare for and bring to the party. I will copy that now and read carefully its entirely suggestions.

Here are a couple of hints for those of you that have never worked this race.

#1…bring a little of your own toilet paper (J). Needless to say but the state run porta-potty might run out! I usually bring a roll or two in a zip lock bag that will accompany me “on the trip”!
#2…bring a lawn chair to sit on.
#3…if you have an HT, bring it! Be sure to program in the Wabasha Repeater. Also, simplex 147.525 which many of us know as “BRAVO”. That is the freq that we’ll use for communications within our own workforce at Aid Stations 1 & 4.
#4…as Roger already stated, proper clothing. 65 degrees last week and a winter storm tonight. Welcome to Minnesota, in the spring where anything can happen weather-wise.
#5…if you are working during the evening don’t forget a flashlight (or two). The headlamp style really works great. NOTE….point the beam down and not at the runners eyes! We are looking for bib numbers which are usually pinned on the chest or waist band area. Again…NOT AT ANYONE’S EYES!
#6…bring your own food and drink in a small cooler.
#7…my little camper is small and old. But it is a GREAT emergency communications station and it has been used for many emergency situations during her lifetime in three states. Please help me by treating her gently!
#8…bring a camera if you want to capture fun moments!
#9…remember that we are there with one primary goal. And that is to provide effective communications. We do assist in other services when called upon.
#10…The most important hint. HAVE FUN!!! Afterall….if it was not fun, why would we all be doing it!

If there are questions please feel free to email or call me.

Topic: 1799 Message: 1799

After the social at Wildwood grill, we have two nets tonight. 6:30 on 147.255 using the MT63 2KL digital mode. Voice checkins are also welcome.

At 8:00, we have the regular 80 meter Digital ARES net on 3583.5 (USB) with Olivia 8/500.

Prior to the net tonight, at about 7:45, I am going to try calling the net on 5373 kHz. That is USB dial frequency 5371.5, centered on 1500 on the waterfall. Even if you can't get on 60, I'd appreciate some reports. Over time, we may try other bands in this slot.

Thanks,
KØRGR

Google is a wonderful thing....
Sheldon’s 73 Shirt can be seen on Dr. Sheldon Cooper on the Big Bang Theory.

The 73 reference is from Season 4, Episode 10 (The Alien Parasite Hypothesis), when Sheldon says “The best number is 73…. 73 is the twenty-first prime number. Its mirror, 37, is the twelfth and its mirror, 21, is the product of multiplying (hang on to your hats) 7 and 3…. In binary, 73 is a palindrome: 1-0-0-1-0-0-1, which backwards is 1-0-0-1-0-0-1.”

Here's a quote by him from the show:

"The best number is 73…. 73 is the twenty-first prime number. Its mirror, 37, is the twelfth and its mirror, 21, is the product of multiplying (hang on to your hats) 7 and 3…. In binary, 73 is a palindrome: 1001001, which backwards is 1001001."

He doesn't mention it, but it's also a palindrome in Morse code (--... ...--)

73,
Jeremiah, AG0T

Try this link to get to the Lacrosse spotter page:
http://www.weather.gov/arx/skywarn

Then click the ham radio link to get a list of ham radio repeaters,
or just go there directly with this link:
http://www.weather.gov/arx/hamradio

Hope this helps :-)

1815. Classes, Programs, Nets

Yahoo group: rochester_hams
Date: 2015-04-13 17:00:28 UTC
From: k0rgr@...
Topic: 1815 Message: 1815

Item #1 - I have only three people confirmed for our Technician class on Saturday, with a couple
more signed up for the class in July. If you intend to be in the class or know someone who wants to
attend, please let me know via email at kØrgrATarrl.net. I had five other people sign up at the SKYWARN class and they haven't responded to my emails yet. I'm very flexible in regard to the schedule, since I'm home in the daytime most days, anyway...

Item #2 - RARC Program tomorrow night - NZØS and I will be doing a presentation on digital modes as we
use them on our nets.

Item #3 - Digital Nets - Thursday, 6:30, 147.255 MT632KL protocol
Thursday 8 p.m. 3583.5 kHz (USB dial freq) Olivia 8/500 protocol

1816. Old QSTs and CQs for free

1817. Dues and Ideas...

Yahoo group: rochester_hams
Date: 2015-04-19 22:57:03 UTC
From: k0rgr@...
Topic: 1817 Message: 1817

Brilliant ideas...
That's what we need, I guess.
KØRDA has been warning us for some time that the club is suffering financially. The most shocking thing for meat first glance is how many people have let their membership lapse this year. So first off, if you haven't paid your dues, please do it now. You can pay online here - http://rarchams.org/PayPal.htm http://rarchams.org/PayPal.htm
Perhaps it would help if we moved that to the TOP of the web page, instead of at the very bottom? (Brilliant idea #1)
There are well over 100 people on the Yahoo reflector, so I hope most of you decide to pay your dues.
It's been suggested that we need to find out what people want to do, in order to make things more interesting and club membership more valuable. I think instead of a poll, I'd like to hear other people's creative ideas .
But one thing we have to keep in mind - until somebody does it, it'a all talk, and I will be the first to admit that I am a lot more talk than action. I think we all have stuff we would like 'them' to do, or 'the club' to do. The problem is that 'the club'is us, and we have to do these things, not some anonymous 'they'.
Here's what I've done - I have a basement room that I have converted into a classroom/lab. Besides using it to teach classes, I want to use it as a place for people who are interested in building things to gather. What I need are projects and people who want to do them. The room is generally available in the afternoon and early evenings during the week. Is there anyone who is willing to try to organize a group that wants to build kits?

We're moving our meetings to the new fire station in July. I believe there will be a pretty fully-equipped station there. Could we find some way to make this available at times other than club meetings, such as for contests, and perhaps have a couple 'activity nights' each week? Or, if the gear is capable, set it up so it can be remotely operated by club members?

HRO is selling the Icom IC-80A (2 and 440 band), analog and D-star capable radio for $199.99 This is one of the longest running production models they have made. The D-star repeater is an active repeater in Rochester, with several nets a week and linked around minnesota. Check it out Steve WiebkeExpect and be flexible to change.

Wow, I thought that was a typo but it's true, $200 from HRO! I almost bought this IC-80 when it was going for over $400 2 years ago and happened to find a slightly used ID-31 instead. This IC-80 is a great deal for playing with DSTAR on our local Mayo roof top based repeater, getting a nice 144/440 FM based radio, and also a "DC to daylight" receiver all in one package. Read more about it both here IC-80AD VHF/UHF Dual Band Transceiver - Features - Icom America

http://www.icomamerica.com/en/products/amateur/handheld/ic80ad/IC80AD_QSTReview.pdf

For anyone on the outskirts of Rochester, you can get into the DSTAR repeater with 5W but you may want to put on an outside antenna if you are in the 75th St range or beyond unless you are on a high hill (I used a $20 minimag mount this winter on my roof overhang). I get on DSTAR about every other day and there is usually someone around the state listening: besides TCs area the St Cloud area is very active but Duluth, Fargo and Marshall have some activity along with users who link to our Reflector 53A from IA, WI and around the US at times. This is not like working HF DX but for Techs or even old Extras like me using an HT it's still over RF, an interesting newer aspect of ham radio worth playing with. The learning curve can be tricky but there are about 10 Rochester users and many like KC0FOW, K0RGR, STV and me can assist.
$200 for an ICOM dual band handheld is a good deal with DSTAR built in. Let us know if you get one by getting on 82 as well! 73

From: k0rgr@...
Topic: 1818 Message: 1820

That really is quite a deal. I have an IC-80 myself, and I find I can get into the DSTAR machine from lots of places where the analog repeaters don't work - like inside Wal Mart. I think that's mostly due to the difference between UHF and VHF.

I have a programming cable for this HT, so I may be able to help if you get one.

I monitor the repeater in the daytime a lot, and people pop up from all over the state at different times. The DSTAR people in St. Cloud and Twin Falls are particularly active, but there are three Twin Cities repeaters tied in, as well as Duluth, Fargo/Moorhead, and others. I think I just heard yesterday that a new repeater in Brainerd will be joining in soon, and there is also a new machine in Faribault that isn't on the network yet. I had a chat with a young ham in St. Cloud yesterday, and it turned out that he went to school up there with my daughter.

Don't forget that we also have two other ways of talking to the outside world via two meters. W0STV has EchoLink up and running, and AB0BW has IRLP on the air.

This may be overly-fundamental, but I have no clue when memberships
expire, and I've sought clarification form the web site and came up
short. Is it calendar year or anniversary year of signing up?

Over the past 3 or so months, I did shoot a few emails to the listed
membership committee seeking clarification, but never heard back.
Some orgs send an automated reminder that membership is about to
lapse. Handy.

It's impossible for me to attend formal meetings due to an exact
conflict on the day/time of monthly RARC meetings, and would ask these
simple questions at the meeting if had been able to attend after all
these years. :-)

> Perhaps it would help if we moved that to the TOP of the web page, instead

Probably - and add perhaps some verbiage as to what the membership
terms and expirations are. I feel badly mine lapsed and had no idea
that it did.

> It's been suggested that we need to find out what people want to do, in

Here's one: embrace openness...

Frankly, I got turned off when (we) drank the D-STAR kool aid. I'm a
huge proponent of digital and enjoy digital...but *only* when the
protocol and codec is open, and not patent and license-encumbered
(i.e. AMBE). I'm also brand-agnostic, and I'm simply not
going to fall victim to vendor lock-in. There are open alternatives I
would have been happy to help implement/test - and am still interested
in open options. Closed-souce and proprietary technologies in Ham
radio, IMO, do not align with the open spirit and open innovation/home
brew of Ham radio. Can't home brew D-STAR w/out paying licensing

royalties for code you can't even inspect/improve.

Since '92 or so, I've make a handsome living developing and implementing/deploying open source technologies, so yeah, I'm a tad biased in that regard. But with good reason: open technologies have large followings, and thus, can lead to rapid and rich improvements.

> But one thing we have to keep in mind - until somebody does it, it'a all

> not some anonymous 'they'.

Great point here. I'd love to experiment with open digital protocols and codecs (Codec 2, etc.) for our club, especially how they integrate with open source software and hardware. I could make time and devote resources to this cause.

Lastly, I have admittedly been less inclined to pay dues because I can't reach the .82 repeater from Pine Island with ~10w and an outdoor slim jim or J-pole. :(

Another idea: I am pretty heavily intrigued by QRP, and know very little about it. Nets and things are neat (except patent-encumbered ones), but I'm wondering how many folks in RARC are into QRP and perhaps could elmer others who may be interested in that facet of ham radio.

Cheers,
--

Just read this and I do not have many other suggestions but it sure is necessary to remind some of us about membership renewals. I bet I have remembered once in every three years or worse! I belong to several clubs as there is no local one in Wabasha. I thought about my Winona club membership last weekend too while helping them with a search exercise. When I got home I forgot all about it. I don't go to the meetings or the club websites because I do not participate in any activities.

I belong solely to help the club exist.

One organization I belong to encourages people to pay for multiple years and the club treasurer DOES SEND OUT REMINDERS when it is time. This is less of a burden on the treasurer as each person typically pays 3-10 years' membership at a time. I pay ten years.

Or send out a reminder to anyone who hasn't paid by Feb. 1 maybe?

From: k0rgr@...
Topic: 1817 Message: 1823

I agree with much of what you are saying, Chip, in regard to the digital stuff. I try to stay on top of this stuff as best I can, and right now, there are a lot of great 'open' designs on paper, and pretty much none in hardware yet. That may change before long, but honestly, the reality has not come near the promises yet.

The first step looks like it will be from a company called CSI, which currently markets a line of radios using the DMR protocol, and the same AMBE codec used by all of the other commercial systems, (yes I know there are variants) including DSTAR, P25 II, and Yaesu's new Fusion. They all use basically the same proprietary chip, so CSI proposes to make it possible to do DMR, DSTAR, P25, and possibly Fusion all from the same HT. CSI has been promising early shipments all year, and I think they've pushed it out to July now, so I'm trying to be patient. I'm on his list to get one that will do analog, DSTAR and DMR out of the box, with upgradeable firmware.

But yes, there is a group that is trying to commercialize the Open Codec. Ham Radio Now has done a whole series of shows lately highlighting these different ideas. I think this one is exciting -
HamRadioNow - Episode 194: HT of the Future

But, like all the others out there, it's vaporware right now. He also talks at some length about a 'reverse engineered' version of the AMBE codec, that they believe might soon be available without patent entanglements, so that there would be a way to incorporate all of these other protocols into the radio of the future.

Right now, what we have is DSTAR. There is a mature network that supports it, and it is still growing, albeit slowly. Yaesu has sold a lot of Fusion repeaters because clubs want a cheap repeater that can do the trick of working both for analog and digital stations (though not at the same time). There are third-party DSTAR repeaters now that make the same claim. Mankato has a P25 machine, and I know there are DMR systems popping up all over. So, I think what's most needed is a way of consolidating all these things. I hope the new codec does that, too, and that in the interim, CSI makes a radio that will do all the popular ones.

As for the .82 repeater - yes, it seems to be struggling at times. I don't know what's changed, but it's weak at my house in Rochester on my HT. I think we should encourage more use of the .625 repeater - it has pretty good coverage to the north and south. I tend to scan all the Rochester repeaters including DSTAR when I'm in the shack.

Chip, thanks for the input. Against my better judgement I have agreed to take on the membership responsibilities. I thought the same thing about putting out a notice that dues are due. I belong to couple of businesses that do exactly that. I also like your idea about defining the membership period (which is the calendar year). I also put out a newsletter and firmly believe we need all the modes of communicating we can get. Not everyone goes to the meetings, not everyone looks at the web page, and even though I'd like to say otherwise, I'm sure not everyone reads the newsletter. I'm going over the list of people that were members and are not now to try to encourage them to re-join.

As far as you reaching the .82 from pine Island I can believe that, depending on location I've had times where I couldn't reach it with 50 watts but go up to Zumbrota and can. We are looking for a new location for it but high spots are very hard to find, especially close into town.

As far as Dstar goes, honestly we goofed. We thought it would allow us to do analog and digital at the same time. I keep hearing that it's the busiest repeater in town, but that's simply because we are picking up other nets over the internet.

Keep the ideas coming, we need all we can get.

John - N0HZN

K0RGR and N0HZN,

Thanks so much for the candid feedback and for showing a little humility. :)

I really like the club and appreciate the spirit. I'm thankful
feedback was solicited from us in the first place.

Sadly, the more clubs capitalize and deploy "free" System Fusion
repeater promos and discounted D-STAR implementations, the less open
protocol and codec development will occur. It's a brilliant marketing
move on the "big 3' to give away back-end apparatus so that we are
forced to purchase a compatible "client" product (of which isn't
interoperable with other proprietary digital systems). I though only
Motorola did that for commercial applications and that ham radio would
remain fully open. I've researched the reverse engineering and it's
simply disappointing that it would need to be done in the first place
(shame on Icom for choosing a license-encumbered codec form the
get-go)...but that's the way it goes. That's not to say D-STAR and
System Fusion aren't really cool and functional, because they are.
Very efficient use of bandwidth. "More than just voice" and all that.
I support the concept wholeheartedly (I am as "digital" as one could
get). It's the principle(s) and that bothers me.

If there's anything I can do to help in the .82 repeater side of
things, I will devote time and resources. When I lived in Byron, I
really enjoyed using it. Now that I'm in some sort of black hole, I
can't leverage it (although I can full quiet W0EAS's .255 repeater
from here).

Thanks folks!

1826. Nepal Earthquake

Yahoo group: rochester_hams
Date: 2015-04-26 01:20:33 UTC
From: k0rgr@...
Topic: 1826 Message: 1826

I'm listening in on some emergency nets related to this huge disaster in Nepal. Right now, they have 14205 and 14215 in use - 205 is for emergencies, only. 9N1AA in Nepal and stations in Bangladesh and India are in the net intermittently, with stations in Europe and the Middle East relaying to North AMerica at the moment.
There are also stations in Malaysia involved.

I'm not copying them too well at this time.

1827. Looking for volunteers, Med-City Marathon, May 26th

Yahoo group: rochester_hams
Date: 2015-04-26 15:04:59 UTC
From: Eric Van Norman
Topic: 1827 Message: 1827

Hello!

It's that time of the year again and I am continuing to recruit volunteers for the Med-City Marathon on Sunday, May 26th. Thanks in advance to those who have already registered. I'm sending this note to the local newsgroup. I'll announce it on the net tonight as well as email people who have worked the event in the past that haven't already signed up. If you know of others who might not have gotten
this note, please let them know. I have 12 people signed up on the web right now and 20 people (or more) are needed. If I don't get enough people signed up by Thursday, I might try hitting up some other groups to get the coverage we need.
To sign up, go to the event page on the RARC website.:
http://rarchams.org/publicservice/index.htm . If you can't sign-up on the webpage, feel free to send me your information (if you have HT or mobile radios, the times you are available, a phone number to reach you, and a T-shirt size.). We need many volunteers and the time span can
be as short as an hour to all day (shifts run from around 6 am to around 2 pm). The race itself starts at 7:00 am in Byron (the wheelchairs, if any sign up,
will leave 10-15 minutes before that).

3x NCS (covers 3 bands)

14x water stop and exchanges (some can work an early stop and then get to a later one)

2x tail vehicle
- gator

1x shadow (maybe 2)

Med-City WebSite: http://www.medcitymarathon.com (Course Map is under Race Info -> Course)

The NCS operators will be near the Mayo Civic Center in the EM-50.

The water stop / exchange operators need to have an HT that can hit
the 146.82 repeater from anywhere on the course and/or a mobile rig capable of
the same.

The Gator driver (and passenger since this can get
boring) needs to have an HT that can hit the 146.82 from anywhere on the course
and/or a mobile rig capable of the same. A 12VDC battery can be made available
if needed. The Gator driver must have a valid Minnesota driver's license. Having APRS is a good thing.

Again, you can sign up on Med-City link at the RARC link above.

Thanks!

Eric Van Norman

Date: Fri, May 15, 2015 at 8:02 PM
Subject: Last Call for Minneapolis Marathon Sunday May 31st!

We're just two weeks away from the Minneapolis Marathon!

Minneapolis Marathon covers most of the Parkways in Mpls, a beautiful route ending downtown. This is a good training event to learn disaster communications. We are open to new hams and if requested, connect you with an experienced ham to teach you the ropes. If you are new with your radio, bring the manual, and your partner can help you with it. This is a great opportunity to give back to the community for your ham privileges.

You need a 2m hand held radio and an ability to be outside for several hours. We have some flexibility with scheduling and can accommodate late arrivals and early leaving.

This year it's on Sunday May 31st! We need as many hams as possible. So bring your friends, reserve your preferred spot early!

Please reply to this message and let me know you are interested. Confirm you have a 2m HT radio, let me know if you have any marathon, EMComm, or amateur radio experience. Let me know if you have any special needs and a preferred location or partner.

1847. Rochwester 82 Machine is OFF

Yahoo group: rochester_hams
Date: 2015-06-02 03:05:12 UTC
From: jes854@...
Topic: 1847 Message: 1847

We have turned the 82 machine off this afternoon because of a steady carrier on the input. Rob KC0FOW shut the transmitter off on the 82 machine Monday afternoon due to s steady signal on the input frequency.

Rob and Steve - W0STV and later myself tried to track the source of the signal with no luck. It appeared to be coming from the Buck Hill area off HWY 63N. Later Dave - K0VH said he was receiving the signal 9 bars on a whip antenna in his basement.
I contacted Mel - KC0P and he said he would take a shot at locating it tomorrow. If anyone else is available and especially if you have a beam, please try top make contact with Mel on the 255 machine.

The transmitter is off on the 82 machine so it won't be damaged. Once we locate the source of the signal and get it turned off, we'll turn 82 back on.

If anyone has any information please contact john - N0HZN or Rob - KC0FOW

Well, I can see that I'm going to need some Writelog help to get this together for Field Day. Most of it looks straightforward, if a bit odd. But I already hit a snag.

Is it possible to change the callsign for the program? I purchased it with my own call, and I don't see where I can change it, other than the messages, to use a different call for Field Day. We could probably do the contest, but it's going to use the wrong call on the summary and detail log sheets, isn't it? Do you just run it that way and edit the summary sheets to the right callsign?

OK, I need that help with Writelog that I mentioned previously. I can't get it to key my radio. My other
CW programs, including N3FJP log work fine, but Writelog just locks up DTR, keying the CW line in the interface solid, whenever the serial port is selected in the configuration. Anybody have any other ideas?

I've followed the sample configurations I find online - no joy. Is there something somewhere else that locks up
DTR? I'm using a RigBlaster Plug n Play, which will use the DTR line to key a straight key input on the radio. There is an indicator that shows what the interface is getting from the computer, and it shows that DTR is on solid when the port is selected for 'CW' in the configuration.

By the way, the latest version of N3FJP is networkable. All we need is a common file that we all have
security access to on the network for the database. I've used N3FJP to do CW contests in the past, and it does not suck. I also have a lifetime subscription. Obviously I would prefer to use it.

Topic: 1853 Message: 1860

Day 3 of the WriteLog follies. I managed to dig up a USB cable and the Winkeyer sent 'R' when I plugged it into the computer. But, for some reason, it didn't like the device. After many attempts to manually remove and load new drivers, I finally just deleted it all, and went away a while and let WIndows find it's own driver, and that appears to work, somewhat. The manager and test programs seem to work fine with the Winkeyer.

Then, I had a time getting Writelog to see the new device. Again, I left it alone, and it eventually found it.

I think it's talking. When Writelog connects, I get a beep from the Winkeyer, but trying to send anything results in silence. I think Writelog turns off the sidetone in the Winkeyer by default. The sidetone doesn't work on the paddles either if Writelog is running. I spent a long time trying to edit the Writelog.ini file to change this, but
no luck with that.

Guess I'll try tomorrow to come up with a cable to hook up the rig, and see if it's actually keying the radio, with no sidetone.

There is a major change of the parade this year with locations, staging, speakers locations, etc. Rochester Fest Parade is counting on us to be able to communicate information to make things run as smooth as possible. This is not going to be a plug and play operation as other years.
I now have potentially two open communications posts that need filling. One is due to a family emergency and the other is to cover an additional parade route station.
I could use two people with HT's, ear phones are a must The operation is to listen to the net control and relay the information heard to the announcing stations and judges. If you can help please call me at 254-3993 for more information or reply by e-mail to W0STV@....
Final briefing is this Thursday at Wild Wood bar and grill

On Friday, July 3, 2015 5:19 AM, ARRL Members Only Web site <memberlist@...> wrote:

To: Dakota Division

As you may have seen, a Senate companion bill to the House version of
the Amateur Radio Parity Act of 2015 was introduced on Friday, June 26.

That means that we can begin writing to our Senators to ask for their
co-sponsorship of the bill. The House version already has 83
co-sponsors (as of 6/29), and we aim to get many co-sponsors from the
Senate version.

There is information on both bills at:
              http://www.arrl.org/amateur-radio-parity-act

At this point, the most powerful thing you can do is to write to your
Senators asking for their support. The web page above has a suggested
form letter.

Please send your letters to ARRL Headquarters, as instructed on the web
page, so that they will be hand delivered on Capitol Hill. Direct
letters make a big impression on our representatives, and hand delivery
gives us one more chance to talk with Senate staff.

Please join in sending your letters for your Senators to ARRL. Both
House and Senate bills have a lot of momentum right now. Please add
your voice to keep the momentum growing.

We still have a local 10m net most Tuesdays 8pm CDT @ 28.325 upper side band (voice/phone). I must admit I have missed a few nets during the busy summertime when it's light out till 930, but am "energized" to check out HF particularly 10 meters after that fantastic Field Day Sunday morning opening when we worked over 300 stations on 10m SSB. I will call this informal net for a few minutes after 8pm and encourage you to get on early and tune around just in case there are other stations out there. If you can't make it tonight do check the band out other times and if you can copy slow CW remember the beacons below 28.300, there has been one from EM51 southern Mississippi consistently.

Todays readings: Flux: 133 A-Index 10 K-Index 1
No net July 14 due to the RARC meeting.

1891. Class Turnout

Yahoo group: rochester_hams
Date: 2015-07-19 14:40:11 UTC
From: k0rgr@...
Topic: 1891 Message: 1891

This seems to be getting monotonous.

We get a fair number of signups of people interested in classes. I send out emails to all of them, and usually get a few who say they intend to come, and a few who say they can't make it for one reason or another. I send out followup emails every few weeks, and a couple the week before class.

This time around, I had seven people signed up. I responded with emails, as I always do. I got a couple enthusiastic responses, and one who couldn't make it on the appointed day. Two couldn't make it on the first Saturday, so I have them scheduled to come on Tuesday the first week, instead.

But yesterday, the only one who showed up was N0KZO's daughter, who wasn't on the email list at all.

I received an email from one who was supposed to be coming and bringing her teenager with her. She
said that when she typed my address into the GPS to come to class, it told her to drive to Minnesota, and she is in New York.

So, I'm still hoping to see two Boy Scouts on Tuesday morning, and to have three in the rest of the class. That makes it worthwhile. But I'm disappointed that so few of those who sign up actually show up for the class.

I think I need to make some changes in the way we do signups.

Back in the good old days, we did it all through the school district. The students registered there and paid for the class up front. The downside was that if a minimum number of students didn't sign up, the class was cancelled. We also had problems getting the classes in their catalog every year. We went a couple years with no classes or very small ones due to this. There is a very long lead time to get a class listed, so we would not make it into next year's if we started now.

The online signup page is great, but I think it needs some work. I think I should probably ask how they wish to be contacted - I'm not sure the emails are working. Any other suggestions are welcome at this point.

1896. Rooftop Disaster

Yahoo group: rochester_hams
Date: 2015-07-21 01:08:08 UTC
From: k0rgr@...
Topic: 1896 Message: 1896

OK, it's my turn to call for help.

I came home from an errand this evening and found my four band rotary dipole upside down, mangled, and shorting out my HF dipole in the process, also taking the two meter antenna with it.

Even though the antenna is badly bent, it doesn't look like it hit the roof.

It's not urgent, but I need some people who can get on the roof and take the big dipole down, and hopefully get the two meter antenna and HF dipole back up. It's a single story house.

All assistance will be greatly appreciated, and there are beverages and probably dinner in it for volunteers.

Thanks,
K0RGR

I'm available any evening this week, and afternoons except for Wednesday.

How many people do you think we'll need? Do you have a ladder that gets up to the roof?

Peter

From: k0rgr@...
Topic: 1896 Message: 1899

Thanks for volunteering, everybody. John, NZ0S is coming over Wednesday evening, to see if he can get it. He and Paul KM0PT put it up there. What's needed is to lower the pushup mast sections, unbolt the broken mast from the rotor, and unbolt the antenna from the mast. Then, I think the two meter antenna and the wire dipole under it are OK, so just need to stick the unbroken part of the mast back into the top of the rotor and raise the mast sections back up. Then, we need to straighten out the wire dipole that got knocked down. I need to shoot some new lines for it tomorrow.

If you can join us tomorrow, that will be great, otherwise, we'll see how it goes and try to set up a different time if more help is needed.

Sorry, it's been a hectic week - had to drive the wife to work at 3 a.m. on Monday and taught class all day Tuesday. John is planning to be here about 6 tonight.

I'm spending the day getting tools ready and trying to shoot new lines into my trees to support the ends of the wire dipole that got knocked down.

Thanks

From: dmusall@...
Topic: 1904 Message: 1904

Due to scheduling issues, we are unable to use the KOA site for our picnic this year. Instead we will be having the picnic at Foster Arend park. We have the shelter reserved for 6pm-close.

We are still in need of people to provide things. I will be bringing my grill (thanks to NZ0S for moving it for me). We are in need of paper products, condiments and other eats items.

Volunteers?

1906. October ARRL/TAPR Digital Conference

Yahoo group: rochester_hams
Date: 2015-07-30 22:27:13 UTC
From: k0rgr@...
Topic: 1906 Message: 1906

Since the annual conference is in Chicago this year, I decided I had to go, so I registered months ago.

This is a very technical conference for those with interest in all things digital.

This year, they will be talking about SDR, digital voice in many forms, Universal Data Radio and a lot of other
topics.

My wife and daughter are planning to go with me. I have to remember to bring an extra pillow so I can
sit on those hard chairs for two days and listen to the talks. Here's a link to the web page and you can see the topics -
ARRL and TAPR Digital Communications Conference https://www.tapr.org/dcc.html

Here's a note from Don Burgess -

Hello Everyone:

I am looking at my staffing sheets and I realize we are short this year, so I am needing to look for more volunteers and confirm the rest. Who is coming or is willing to come to Gaylord for next Saturday???

5k RUN - 08:00 - 09:30 AM Briefing 07:30 AM in the North Park EOC
100+ Piece Parade - 1 PM - 3 PM - Staging 11:30 AM
FIREWORKS - 8 PM Staging - SHOW AT 10 PM
WRAP UP - 11 PM

The City chamber is buying us dinner for all the operators who help with the 5K RUN & Parade. If you like to work for FOOD, then by all means -- WINNER HERE!! We will have water & snacks on hand in the EOC Trailer for the day for all operators.

Please RSVP to me even if you have already talked to me, so I can add you to my STAFF Sheet for the PD Chief. This is as big as our WINTER ARLIDAZZLE Parade, so plan to have fun and have a great time....but I need any and all support....please.

PD CHIEF has approved ALL HAMS with Safety YELLOW lights for the day on your vehicles, and requires us all in SAFETY VESTS when on assignments.

MAPS and support docs will go out by Wednesday.....

Thank you,

Don Burgess - KC0QNA

11 people took their amature licensing tests this evening. 3 from the twin cities, and 8 from Rochester. Six locals will get a technician class ticket and 2 received upgrades. You will have the opportunity to meet these newest members to our club at the RARC picnic this coming Tuesday. Please make an effort to welcome them to the amatuer radio community, they are the future of ham radio. 73

Spotted this in the latest Community Ed catalog: Fun Halloween Electronics!...It will introduce you to some basic electrical engineering concepts followed by a hands-on project...You will leave the class with everything you need to continue your new found hobby including a soldering iron, solder, an Arduino controller board, a multi meter, a bread board, safety glasses, and of course, your Halloween project.

I haven't seen the whole course, but what I see in the demo looks pretty good. These classes are not free or even particularly cheap, but I think I will suggest them for people who can't attend my regular classes. I always get a few who can't work Saturdays into their schedule, and I've found that it doesn't seem to matter much when I schedule them, I can't please everyone.

I'm not planning another live class until January. I'd like to do both Tech and General this next time.

Sounds good. The impressive thing is that they give a lot of detail and the cost up front. Many on line classes hide the cost. The 59 or 99 for extra sound cheap to me. A live class with a good instructor is better but if you cannot then this should be a good second choice.

No code makes things easy but soon we will have no CW operators for contests :-)

1933. Club meeting tomorrow

Yahoo group: rochester_hams
Date: 2015-09-08 03:54:29 UTC
From: somheil@...
Topic: 1933 Message: 1933

This month at the RARC we'll check out our new digs.

Sure, we've been meeting in the new fire house for a few months but the place wasn't finished. Now that everything's (hopefully) complete we can see the place in all it's functional splendor. We'll take a proper tour of Rochester 's new firehouse and Emergency Operations Center and along the way maybe have a Q&A with folks from the FD and EOC.

The September meeting is Tuesday the 8th at 6:30 PM in our new home, the firehouse on Viola RD NE near West Circle Dr.

I'm having a really lousy week, so it's time to stir up trouble, I guess.

I think the lack of natural SKYWARN events has had a detrimental effect on our recruitment and retention of new hams in recent years. I think our radios and our skills are dribbling away.

We can't generate thunderstorms easily. But it seems to me that we might want to consider having
some drills and the Monday SKYWARN nets during periods like this, where there are no severe storms.

What does everyone think? Is this something people would participate in?

Bill,

1939. Harebrained Idea Part Deux

Yahoo group: rochester_hams
Date: 2015-09-11 18:09:48 UTC
From: k0rgr@...
Topic: 1939 Message: 1939

OK, it seems that the folks that responded so far don''t think it's a stupid idea, so I will try to find a
good time/date for the first SKYWARN drill. I'll need to coordinate with our SKYWARN net controls, though we could do this simulation with them operating from home.

While I'm here, I wanted to mention this item from the PANBEMS group -

" Dear OMs,
I have uploaded the first formal release of AndFlmsg for Android to http://w1hkj.com/vk2eta:
- App executable (.apk) Version 1.2.0- App source
- Quick Start guide
- User manual
- Readme_first. txt
- Install.txt

Extract form Readme_first. txt:
The main objective of this development is to provide a low power highly-portable, as in mobile or backpack, Flmsg/Fldigi solution.
Rigs like the Yaesu's FT-817, Icom's 703 and Elecraft' s KX3 would be the typical companions of the Android phone or tablet running AndFlmsg, thereby providing a low weight, low energy requirement, access to most Flmsg services.
The integration of Internet sharing/forwarding makes this solution attractive as a relay option, possibly a mobile or portable station in a pertinent geographical location.
The inclusion of modes like MT-63 and long interleave MFSK modes allows audio coupling to be used effectively without the need for an audio interface.
The addition of images and GPS data inclusion opens the usage to practical field reporting too.

All the best,
73, John (VK2ETA)

"

I've played with the beta version of this Android app for quite a while, and it works well, particularly with MT63. I ran our Thursday night digital net with it s while back, and it worked fine. We even sent some messages, as I recall. I wish it was on iPhone as well, because my iFruit are much better than my Android at this point, but I'll take what I can get. You can get pretty decent Android tablets for under $100 at MicroCenter, among other places. I bought mine refurbished a long time ago.

MT63 is very forgiving in terms of audio, so you can easily acoustically couple your radio to the Android tablet or phone. If you want to build an interface, there are plans out on the web, and this app would work for most of the popular modes. The beta is focused on the FLMSG function, sending messages rather than keyboard chatting, but I don't know about the final version.

From: steve wiebke
Topic: 1941 Message: 1941

I have picked up some bad habits over time. I've used 73, Hi-Hi, and what is your QTH in the past. Time to get into the habit of using plain language on the FM frequencies. Read this article.
 Presented by Tim, AJ4D
As I fade from the VHF/UHF bands back to HF, I hope I can share some of the things that really might help other operators become better operators.

Even on VHF, I sometimes "get in a big way of talking" and forget to ID on time.
But, below are some of the things that might help everyone out somewhere down the line, QSL ?
(just had to throw that in there to show how stupid it looked).

I really believe that the reason a lot of the new hams don't operate as much as they could is that they simply cannot figure out what the heck is being said!! It makes them afraid to talk.

The other thing is that some operators on repeaters have their own little "group" and that little group is the only one they will respond to or talk to. I hear so many new callsigns being correctly " thrown out' on repeater frequencies and no one goes back. I try to jump in and talk to them if no one goes back to them by the second try.
It makes them feel left out, looked down upon , and more like giving up on the HOBBY than anything else when they hear people talk for 30 minutes and then when they get the courage to key up, no one comes back!
What happened to being courteous!
I truly believe that is the reason there is not that much traffic on repeaters now. Why should operators keep trying over and over for days to get someone to talk to them or sit there and listen to a bunch of garbage that they have never heard of?

Get on there and tell the new ham,
" Good to hear you, just get on here and if you talk on it like a telephone in plain english and ID every 10 minutes with the repeater ID timer, and sign off by saying your ID , you will learn a lot from the people on here and will be made to feel welcome".
Seventy threes, seventy thirds, eighty eights....
BELIEVE IT OR NOT , THESE TERMS DO NOT EXIST on voice !

Q- signals.....
THEY HAVE NO PLACE ON FM PHONE ON A REPEATER, AND AS FAR AS THAT GOES , THEY HAVE NO PLACE ON FM AT ALL!!
Again, they are created for and from CW and ssb traffic nets ; Q signals were developed for ease of operation on CW and ssb traffic nets.
If you ever do CW , you will find that sending QTH for " my location " is much shorter.

Speaking in voice, especially on FM using Q signals would make me ask," WHY DO YOU HAVE TO USE "Q" SIGNALS ??? Because it sounds "cool" ?
Why would you say, " What is your QTH, you have a lot of QRN, QUA Jim lately? QSL?"All the tech licensees are sitting there saying " what the heck is he talking about?"

Or why would you say " Hi , Hi " on voice (CW .... = H I H I for humor intended) ???
Oh , by the way, coded transmissions ARE NOT ALLOWED ON VOICE per Part 97... hmmm!

Many control operators don't say anything at all about users because there are not that many users anymore and they are afraid they will ' run somone off ' .

There are courteous ways to mention these things to newer operators "on the air". Here is one of them, " Hey, you dont have to say all that Q stuff because you are on FM phone, just use it just like you're on a telephone, remember kids are listening..... PLAIN ENGLISH! All you are required to do is be courteous and say your callsign every ten minutes as the repeater ID's, and use it when you sign off.... and dont say seventy threes or seventy thirds..... simply say your call and bye, see ya later, etc...." Again PLAIN ENGLISH!

Listening.... Monitoring.... or calling " CQ" CQ -.-. --.-
Again, when using CW,"CQ" is a lot shorter than "calling any station".
ON FM, SIMPLY KEY UP AND SAY YOUR CALLSIGN OR ASK IS ANYONE ON THIS REPEATER. Make sure you don't "double", (talk at the same time), in any circumstances or band!!
On FM repeaters though, listen,..... then just "drop in your callsign" ......
Chances are no one will come back , but dont give up. Maybe all the "QSL'ers" will someday learn to send CW and learn they had been using the wrong operating procedures and come back and talk to you like a normal person on the repeater.
.....We copied Tim! Thanks!.....N4UJW

From: k0rgr@...
Topic: 1943 Message: 1943

We'll be hitting this one hard this week.

Next Saturday is Mayo's BOUNCE DAY event. This is an exercise for the Mayo Medical School that exposes medical students to the experience of working under field conditions. The scenario is an elaborate zombie attack, with the zombies presenting a variety of medical conditions to the future doctors.

ARES has been asked to provide local communications for the event.

It's not certain yet, but I may need someone with HF capability who can get on and talk to Eau Claire for us. We've been asked to pass some simulated message traffic between there and here. We might be ale to do this on 147.255 as there are people in Eau Claire who can hit that repeater, but probably need to plan to use
HF. I will award bonus points for digital. Please let me know if you can be available for HF operation from
home on Saturday morning.

Thanks

1950. Classes

Yahoo group: rochester_hams
Date: 2015-09-23 22:42:30 UTC
From: k0rgr@...
Topic: 109 Message: 1950

I'm thinking about putting some tentative dates out for classes .

I had not planned to offer one this fall, but I think I could do one in November if I can find students.
November 14,21, and 28 look like a good time to do it.

January 23, 30 and Feb. 6 would be the next Tech class.

I'm planning to do a General Class 3/12.19, and 26.

If I don't get enough Tech students for November, are there people out there who want a General class in that time frame?

I'm also considering an Extra class. I've never attempted one, and honestly have a lot of question marks about how I'd do one, but I'm willing to put one together if there is interest. I don't think it will be a three day class like the Tech or General, however.

I'm also working on setting up a class in April with Community Education. It's looking good, but I'm not holding my breath. There are a bunch of hoops to get through, and little time to do so, but the paperwork has been submitted. We have to charge less for the Community Ed classes and they keep $5 for each student. So instead of $25 a head, we can only charge $24 and will net $19.

I'll put out a few calls for our Rochester 10m net tonight Tue Oct 6 at 8pm CDT on 28.325. I know we haven't had a net since (??) July and discussed putting it off till Fall, so if this is a too late notice perhaps we can discuss it at next week's RARC meeting to see if this net's worth pursuing at some point.

I see from other group emails that 10m has been open recently but I just got back this weekend from 16 days in Europe, mostly for an 40th Anniversary Mediterranean cruise. Soooo, despite talking to a few on 2m FM or Dstar I haven't been on HF for almost a month, it's time to get fired up for improving conditions this Fall I hope!

Just back from Chicago, and the ARRL/TAPR Digital Communications Conference. I haven't had this much fun for ages. It seemed that everyone in attendance was someone like me - somebody who worked in digital communications forever and now wants to apply that experience to ham radio. Nerd Heaven! These are people that ask "How?" before they ask "Why?". though the "whys" are usually pretty good, too.

I even ran into people I never met while at IBM, but were very important to me when I did. They worked on the third party products I tried to integrate into IBM's world, and we spoke each other's languages. Amazing!

I saw some pretty interesting demos and presentations, most of them revolving around Digital Voice and SDR. There were advocates of all the major camps there. Most of them were cordial, though the Yaesu people were, frankly, very pushy, and interrupted at least one presentation. I thought by far the best sounding digital audio was FreeDV - which you can do with a PC or with a new standalone unit that is 'open source' both hardware and software. FreeDV also uses half the bandwidth of SSB, and has performance similar to it.

We saw the world's first demonstration of Yaesu Fusion linking over the Internet through a repeater. Honestly, Yaesu claims their audio is much better than DSTAR - I didn't think it was as good. It does look like they are building quite a network, but it's really not there yet. People can get on today if they have a Fusion radio and one of their $100 gateway boxes. They promise that you can do it through a repeater in November. Fusion does have some nice features. You can do the Internet connection without having the Internet at the repeater site. Their special $500 deal on their repeaters runs through the end of December. I think the club might want to consider getting one at that price, and using it as a replacement for the .625 or .82 machine. You don't have to turn the digital on, if you don't want to, but it's there if you need it. It's also a dualband repeater, so you can set it up on either two meters or UHF - very neat. If the Fusion was turned on ,the machine would work as an analog repeater for analog signals, or a Fusion repeater for Fusion signals. Analog users would need to turn on tone squelch so they would not hear the Fusion noise.

Oh, and there ir a third party selling a module you can plug into the Fusion repeater that will make it tri-mode,
analog, Fusion, and DSTAR all in the same box. Now that would be something! Speaking of that company, their president pledged that their Universal Data Radio (UDR), which will do high speed data as well as DSTAR, will ship by March or he will set himself on fire. The next presenter was Bruce Perens, k6BP, who is developing a FreeDV-based HT. He says his HT will ship by March or he will set his associate on fire, and the UDR guy needs to learn to delegate!

I saw a demo of some fairly inexpensive addons to convert your FT8x7 or IC7000 into an SDR at the IF level. It requires a minor mod to the FT8x7 or some soldering on the ICOM.

One fellow had an Az-EL rotator built completely from parts made with a 3D printer. His engineering students designed and built it in a week, complete with satellite tracking

software to support it! The whole design, including CAD files and object files for the 3D printer are online.

Another thing for the club to consider might be hosting a DCC some year. It's a fairly small event, with a couple hundred participants, so there are venues in Rochester that could easily handle it.

FYI - This years SKYWARN Recognition Day (to recognize the efforts of amateur radio operators in the SKYWARN process), is Saturday, December 5th.
As usual, we'll be operating some radios from our office, trying to make contacts around the US (World) to help celebrate the day. We urge you and your clubs to participate by joining us at our office, helping to work the radios a bit, and socialize.
We'll likely operate from 8am-4pm that day, give or take an hour. Quick office tours will be available and we'll have some snacks all day.
You can visit the event web page at: http://www.wrh.noaa.gov/mtr/hamradio/
Again - please spread the word to all your SKYWARN ham radio operators. Visit our office that day, help out, get a lunch, etc.

Active in Disaster (MNVOAD) or by local agencies.
Minnesota ARES to participate in DoD Exercise
Minnesota ARES will partner with the Minnesota Military Auxiliary Radio System (MARS) in a Department of Defense (DoD) sponsored communications exercise. Scheduled to begin Saturday morning, November 7th, the ARES portion of the exercise will continue until Sunday evening, November 8th.The purpose of the communications exercise (COMEX) is to gather infrastructure reports and weather observations at the county level after a simulated Coronal Mass Ejection of catastrophic proportions. All ARES stations are encouraged to participate.According to Dick Roberts N0UC, Army MARS Minnesota State Director, "MARS is organized at the region and state level. With the need to gather local information, ARES is the perfect partner for three reasons: First, Minnesota ARES members are well trained and disciplined operators. Second, they have a strong, functional organization from the state to the county levels. And, third, ARES members are strategically distributed across the state. They are positioned to gather information from the widest possible geography."Minnesota Section Emergency Coordinator, Dan Anderson has tasked Joe Reinemann K0JCR, South Central District Emergency Coordinator with the responsibility of coordinating this exercise. Joe adds, "This COMEX is an outstanding opportunity to test our organization’s skills across county and district lines. We can sharpen our message handling skills with both voice and digital modes on HF frequencies. It is a rare opportunity to add a national organization as a served agency. More information is forthcoming in the next week, but important things to be aware of right now are:1) Incident Command System procedures, forms, and message formats shall prevail.2) All operations will take place on Amateur Radio frequencies.3) All ARES members are encouraged to participate. Although the exercise spans several days, stations do not have to be available for the entire period. In fact, most ARES on-the-air activities will occur Sunday.4) Information will be provided on helping to make your station survivable during a coronal mass ejection and geomagnetic storm. This knowledge has real-world application since it has happened before and will certainly happen again.5) Training will be provided on how to format reports describing local infrastructure (i.e., roads, electrical power, telephone, water, etc.) and local weather observations."Add this COMEX to your calendar and watch for additional information in the coming weeks. Operational details such as times, frequencies, ICS staff, etc., are being coordinated with your DEC’s and EC’s.

Hello all,

In order to have a room for our breakfast at breakfast…… Stew called Old Country Buffett and was informed that the room was NOT available. Two personal visits around town late and I was able to get a room committed for our breakfast and presentation at Barlows Hy Vee.

Please update your calendar with this location.

Topic: New thoughts and experiences with vertical antennas

Time: 8:00 AM

A change in locations for breakfast this weekend in order to enable our guest, Tom Schiller, from Next Generation Antennas, to give us a short presentation. Everyone is invited, invite friends as well.

View his website to see what strengths and experience his brings to the table.
website: http://www.n6bt.com

Tom has been in Rochester since Monday upgrading Scott's, K0MD, 160 meter vertical and 80 meter four square antennas.
He has agreed to give a presentation about his new findings regarding vertical antennas.

See you there,

1969. Joint ARES/MARS COMEX Exercise, Nov 7-8

Yahoo group: rochester_hams
Date: 2015-10-29 22:56:43 UTC
From: k0rgr@...
Topic: 1969 Message: 1969

We will have a joint ARES/MARS exercise on 11/7-8 that simulates the results of a massive solar flare that takes out communications, the Internet, and the power grid.

Our job in ARES is to gather SITREP status reports and forward them to MARS personnel through the proper chain of command. Local ARES members should send their reports to their local EC, or DEC if the EC is not available. The local EC should consolidate the reports and send them up to the DEC. The DEC will consolidate the reports for the district and pass them the central station designated by the SEC.

All of this fun starts for us at 0600 on Sunday the 8th. I will start listening for reports at 0700 on the local 147.255 (PL100) repeater and 3845 kHz LSB.

There is a required format for these reports. I will post the documentation for the exercise in the Files section of this site, or you can request a copy by emailing me.

Thanks
Bill - K0RGR
DEC Southeast MN ARES

Topic: 1977 Message: 1977

Yeah, whoever scheduled this for CW SS weekend needs some training. It could have been DX Contest weekend, which would probably be worse.

Our (ARES) involvement is early Sunday (the 8th) morning. As I understand it, they are looking for SITREPS from each county. If you look at the SITREP form, there are specific things they are looking for - in regard to power and other facilities. These questions apply to the whole county, so only one report is needed per county. I'm going to double check on that with somebody to make sure, but I think that's the expectation. We don't have a very big window of time to pass the messages, particularly if it is done on voice. I plan to use digital modes to pass it up to K0JCR on 80 meters, but if that doesn't work, I'll be using SSB.

Subject: [rochester_hams] More on COMEX

Yeah, whoever scheduled this for CW SS weekend needs some training. It could have been DX Contest weekend, which would probably be worse.

Our (ARES) involvement is early Sunday (the 8th) morning. As I understand it, they are looking for SITREPS from each county. If you look at the SITREP form, there are specific things they are looking for - in regard to power and other facilities. These questions apply to the whole county, so only one report is needed per county. I'm going to double check on that with somebody to make sure, but I think that's the expectation. We don't have a very big window of time to pass the messages, particularly if it is done on voice. I plan to use digital modes to pass it up to K0JCR on 80 meters, but if that doesn't work, I'll be using SSB.

Topic: 1980 Message: 1981

November's program will followup last month talk about Logbook of the World and dig into ARRL Awards and QSL Card Field Checking.
Mike Cizek, W0VTT, will give a presentation explaining the ARRL awards program, the QSL Card field checking program, and how to use Logbook of the World for ARRL awards. Topics will include a brief description of the rules and how to apply for DXCC, VUCC, WAC & WAS, how to arrange for local QSL card checking for these awards, and how to use Logbook of the World for award credits.

Mike has been licensed since 1975 and has been continually active on the bands mainly as a CW operator. He has been involved with the field checking program since its beginning in the early 1990s while living in the Washington , DC area, and is an avid DXer. Mike retired and his family moved to St Charles MN last summer where he enjoys the good life on the edge of the prairie.

KENWOOD DSTAR HT TRIBANDER
Sat Nov 7, 2015 4:28 pm (PST) . Posted by:
"Kent Hufford" kq4kk

I talked to the Kenwood rep and AA4RC at the Stone Mountain GA hamfestTODAY.

Also announced during the DSTAR Forum. Nothing on the internet as far as I know.

It is a HT, a cross between the TH6 and TH72.

It will do DSTAR, FM and APRS, has a GPS built in like the TH72.

Tri band, 2m, 440 and 220.

Kenwood should release more info around Thanksgiving. Comes out in March 2016.

That's all I know.

Kent

KQ4KK

Prices have dropped on ICOM DSTAR capable transceivers.

51A+ $360 - A GREAT buy for such a capable HT. Color, Anniversary Editions are much more. The + is the current one.

880 $400 - Price went up a little

5100 $600 - Good buy for all the capability

7100 $1000 - FIRST time at below 1K ($999.95) 1/3 less than when they came out

9100 $2500 - Not so much a drop

FLEX 6300 w/DV3000 card $2630 Unless you want to work Satellites at 100 watts SSB, the FLEX is a better buy.

FLEX RADIO with their SDR software update 1.51 fully supports DSTAR with the use of a DV3000 USB drive plugged into a 6000 series FLEX radio. Now to do DSTAR on a FLEX, you just click on the mode DSTAR, just like USB, LSB, AM, CW, etc. Works great, the waterfall display really helps finding spots on DSTAR HF. WE now have two major radio manufacturers supporting DSTAR.

So now we have ICOM, FLEX and KENWOOD in the DSTAR business. I particularly like that this one will do APRS, making it more useful for someone like me, who wants to do both digital voice and analog APRS. That's my big beef with ICOM - they eliminated the interface that lets you use an external TNC or tracker.
Maybe we'll see a TND710-D mobile with both GPS and DSTAR built in? That would fill a niche for me.

1986. RPU Commercial Status

Yahoo group: rochester_hams
Date: 2015-11-12 19:19:00 UTC
From: northwoods3@...
Topic: 1986 Message: 1986

Hi, I hadn't been real active nor able to attend an RARC meeting in a couple of years (life is just full), but was able to attend Tuesday with my Son who's considering his license.

Per the concern over the power cost/commercial meter status of the 146.820 repeater discussed at Tuesdays meeting. I have a contact at RPU and thought maybe it's worth a long shot to ping him about our situation. Figured the worst that could happen is I get the same "no" response Dan received.
My contact said he'd ask around but was wondering the account number.

First, is there club interest in me attempting this? And if so I need our account number, either here in the Yahoo Group or email (dennis@edholms.net).

Thanks!

Dennis Edholm - KC0VIQ

1987. Re: RPU Commercial Status

Yahoo group: rochester_hams
Date: 2015-11-12 22:37:52 UTC
From: northwoods3@...
Topic: 1986 Message: 1987

I don't need the account number. Just talked to my RPU contact. He went directly to the market manager and they were able to look up our account without the number. Basically there is no category between residential and small business (where RARC is at). I was hoping there was maybe a unadvertised not-for-profit category or something that customer support wasn't aware of or not authorized to roll to, but seems there isn't. We're one notch above resident meter charges. Seems our option is "buy/borrow" power from someone else there or unplug .82.

My contact said we should go solar given our extremely small usage, don't know if that's an option at that site?

Dennis

1988. S 1685--Amateur Radio Parity Act of 2015 - One Day left

Yahoo group: rochester_hams
Date: 2015-11-17 18:54:57 UTC
From: jes854@...
Topic: 1988 Message: 1988

We have received notice that S 1685 will be one of the bills in the "mark up" process at the Senate Committee on Commerce, Science, and Transportation next week. Mark-up is an extremely important step in the bill's progress through the Senate.

Amy Klobuchar, one of Minnesota's two Senators, is a member of this committee, so we Minnesotans have a special reason to e-mail her to ask for her support of the bill. You can get to Senator Klobuchar's e-mail input form at:

http://www.klobuchar.senate.gov/public/email-amy
http://www.klobuchar.senate.gov/public/email-amy

Your message doesn't need to be long or detailed. You could say something like:

"I'm a constituent and an amateur radio operator. I am writing to urge Senator Klobuchar to support S. 1685, the Amateur Radio Parity Act, when it comes up for a vote in committee on November 18th. Thank you."

The 18th is next Wednesday. Please send a message to Amy as soon as you can, and let her know that there are people among her constituents who care about and support this bill. Your e-mail can help make a difference!

Here's an example from Steve - N0HZ

I'm a constituent and an amateur radio operator. I am writing to urge Senator Klobuchar to support S. 1685, the Amateur Radio Parity Act, when it comes up for a vote in committee on November 18th.

Amateur radio, at no cost to taxpayers, provides a fertile ground for technical self-training in modern telecommunications, electronics technology, and most importantly last resort emergency communications techniques and protocols (Think Katrina). Public and commercial systems are fragile in a disaster situation like 911, Katrina, and other world wide disasters; often relying on Amateur Radio operators working with other public and private agencies to fill in that gap while other systems are being repaired, and often by the very same group of professionals that are themselves part of the 700,000 USA Amateur radio community. Ongoing and increasing application of private land use restrictions, including restrictive covenants has been affecting the effectiveness of Amateur radio communications, especially in emergency situations.

Thank you.

RPU contacted me again after discussing our situation a bit more. They said if our usage is very flat month after month their may be a way to save us a little bit of money after all.

Not sure how interested the club is in me running this down or not, and I don't want to waste their time if we're going a different direction. I stand by for feedback and if I don't hear any I'll drop it.

Thanks,
Dennis - KC0VIQ

Reminder - This years SKYWARN Recognition Day (to recognize the efforts of amateur radio operators in the SKYWARN process), is this Saturday, December 5th.
As usual, we'll be operating some radios from our office, trying to make contacts around the US (World) to help celebrate the day. We urge you and your clubs to participate by joining us at our office, helping to work the radios a bit, and socialize. It would be great to have more operators so we can make more contacts.
We'll likely operate from 8am-4pm that day, give or take an hour. Quick office tours will be available and we'll have some snacks all day.
You can visit the event web page at: http://www.wrh.noaa.gov/mtr/hamradio/
Again - please spread the word to all your SKYWARN ham radio operators. Visit our office that day, help out, get a lunch, etc.
Thanks again! And if you can't make, a big THANK YOU for all the support you give us year around.

From: k0rgr@...
Topic: 1994 Message: 1994

Hello to all. I thought it was time to start spreading the word about the upcoming Technician class starting in January.

Class Info - The class starts on January 23rd, and runs for three consecutive Saturdays, from 10 a.m. to roughly 5 p.m.. Lunch will be provided. The location is my 'classroom' in my home, 2439 Meadow Hills Drive SW, Rochester.

Class fees - There is a $25 fee for the class, or a $35 family fee if there are two or more family members taking the class.

Testing - we usually have the test here in Rochester on the Thursday following the last day of class, but the exams are given many times throughout the year in neighboring cities, and basically weekly in the Twin Cities.

There is a signup for the class on the club web page, or you can contact me by phone at 252-5852.

1995. Thursday Night Net Reminder

Yahoo group: rochester_hams
Date: 2015-12-09 17:12:24 UTC
From: k0rgr@...
Topic: 1995 Message: 1995

We have two nets on Thursday nights.

6:30 - 147.255 repeater - SE MN ARES NET and SE MN DIGITAL ARES NET - the first Thursday of the
month, it's a voice net, and the others are a digital net where we take voice checkins, too..

8:00 - 3583.5 KHz, USB dial frequency - Olivia 8/500 - Minnesota Digital ARES Net -

Checkins on the two meter net tend to be sparse, but I have 'regulars' in about 5 counties. The 8 o'clock net
is usually a bit busier, with checkins from all over the state and usually beyond.

EVERYBODY is welcome on both nets!

On Sunday, December 6, 2015 7:51 PM, Len Litvan <Litvan@...> wrote:

Hello Dan,

Attached is a special invitation to the Rochester ARC to participate in the December program of the Winona club. This promises to be a "highlight of the year" program and a great opportunity for hams in the region to learn from one of the leading DXers and accomplished amateurs in the area.

If you would be so kind as to pass the information on to RARC members (Sunday nets, monthly program, etc.) I would be very appreciative. Here's hoping the weather cooperates on the 17th and folks who are interested in attending the program can easily do it.

The special invitation is in a format that might be suitable for printing. If you print some copies and make them available at Tuesday's holiday party and officer elections, I will owe you.... :-)

2007. Ten meter net 28.325 8pm TUES (a proposal)

Yahoo group: rochester_hams
Date: 2016-01-04 15:55:51 UTC
From: dcnaatz@...
Topic: 2007 Message: 2007

CQ the Rochester/SE MN 10 meter net, tomorrow Jan 5 Tuesday @ 8pm on 28.325 upper sideband voice.

Some of you may have been regulars on this net that Dick WA4EJJ started out over 10 years ago.
It still shows on our RARC web page but hasn't been regular the past 6 mons or so http://www.rarchams.org/nets.htm http://www.rarchams.org/nets.htm .
I'd like to propose we restart this net and see if there is interest to do it monthly on the first Tues.
I'm thinking we are likely to find more local checkins in the cooler darker months than in summer when it's still sunny out at 8pm. I'm not hung up on first vs third or fourth Tues either so if that makes a difference send me an email dcnaatz at gmail.com . Most of us use some type of online or work calendars with reminders so I don't see doing a net monthly vs weekly a big deal either.

When Dick ran the net for many years we usually had some ham related topic of discussion which I'd like to restart tomorrow. Any input on a topic please send to my personal email, so we don't clog up this group forum. If I don't hear back I'll float a simple topic like what are your most recent 10m QSOs (BTW, the Dec 12 10m contest weekend did not have good propagation but this past weekend's RTTY contest was a little better at least stateside & into So America).

73 & looking forward to hearing you on 10m 8pm Tues!

2010. Where to find NBEMS/FLDIGI Files

Yahoo group: rochester_hams
Date: 2016-01-15 01:45:40 UTC
From: k0rgr@...
Topic: 2010 Message: 2010

Once upon a time, there was a great web page with all the code you needed to do everything in the NBEMS/FLDIGI universe. Unfortunately, that site was hacked, so the author of FLDIGI moved everything to Sourceforge.

This link will get you started -
fldigi - Browse Files at SourceForge.net http://sourceforge.net/projects/fldigi/files/

fldigi - Browse Files at SourceForge.net http://sourceforge.net/projects/fldigi/files/ Ham Radio Digital Modem Application

View on sourceforge.net http://sourceforge.net/projects/fldigi/files/
Preview by Yahoo

On that page, there are sets of folders. The first one that we need is 'fldigi'. Click on the folder, this will open a list of fldigi versions you can download. There is a link at the very top for the most current version. If you click that, it will download that file. Execute the file to install FLDIGI. I have a folder on my desktop with all my FLDIGI program shortcuts in it, for convenience. Just drag the icon to your folder or leave it where you will .

The other directories with programs we want are 'flmsg', 'flwrap, and 'flamp'. Install each of those. You can configure FLDIGI to autostart those when you start FLDIGI.

Let me know if you have questions!

This net meets before ours - It's usually from 7-8 our time, which doesn't agree with this announcement. They are often still going when I start my net at 8 about a half kHz higher. Some nights I check into that net, too, as do most of the folks on our MN Digital ARES Net.

They have experimented with a lot of different modes for passing traffic. I've heard them switch to full 2 kHz wide MT63 at times, which doesn't fit well in that frequency slot when there are other nets operating nearby!
There's a CW net about 1 kHz higher, and other digital nets very nearby. 3583 is a popular place! We use 3583.5 (USB dial frequency) with a cetner frequency of 1200 on the waterfall, most nights. I often have to move a few hundred Hz one way or the other to avoid QRMing people.

Our net actually passed a piece of formal traffic the other day. We're not really a traffic net, but once in a great while, we do get an NTS message. The MI net handles a lot of traffic.

The way the propagation has been this winter, their time slot works a lot better than the one I'm using. Lately, 80 meters has been 'going long' shortly after 8 p.m., so the locals can't work each other anymore. Last week, I had a station in LeSeur relaying for me to people closer to me, and stations in North and South Dakota could hear us just fine. One night recently, the closest station that could hear us all was in Oklahoma. This is great for DX, but not good for regional nets.

I would like to establish alternate frequencies on both 160 and 60 meters, to compensate for the changing propagation on 80 during the year. In summer, 60 would work better than 80, and in mid winter, 160 would. But too few people are equipped for those bands.

Hopefully, in a couple weeks, the propagation will stay with us later in the evening on 80.

Topic: 2010 Message: 2013

I was asked which NBEMS modules we would need -

FLDIGI will also install both FLDIGI and FLARQ. We haven't really used FLARQ lately. It is a way of sending files, but it is also quite slow.

FLMSG is what we use to format the messages.

FLWRAP is used to create a checksum over a message, and verify that it was correctly received.

FLAMP is a better way to send files, and is used for some forms of traffic

The other modules do different things. FLRIG is rig control. FLNET is just a way to log net checkins.
FLWKEY integrates the popular WINKEYER into FLDIGI.

In the configuration you can set the needed programs, FLMSG, FLWRAP, and FLAMP to start when you start FLDIGI - this ensures they are all running when needed.

In FLDIGI, under configuration, check the 'Misc' category - under the NBEMS tab, all four of blocks should be checked, so that when a message is received, it will be automatically processed with FLMSG.

2014. Class Cancelled

Yahoo group: rochester_hams
Date: 2016-01-23 17:19:35 UTC
From: k0rgr@...
Topic: 2014 Message: 2014

I knew I needed to check my email this morning before I went down to set up for the class. But, I was in a hurry. Class time came and went, and no students showed up.

Feeling dejected, I checked my email. The person who organized the group I was expecting had an accident, and broke some ribs thanks to the ice. So, they will be here in April for my next class. The one remaining student, who was supposed to do a makeup session this week and join the class next week opted to wait until April, too.

The class in April is going to be through Community Ed - the class code for registration is 7030.231 .
I'm a little concerned we'll end up with too many people and I'll need to move the class - probably back to the Red Cross building or perhaps to the EOC? I really enjoy having them here because I can demonstrate things instead of just talking to them. The EOC would be a great place, too, if we could get to the radios.

I think from now on, I am going to plan on two classes a year, through Community Ed. That was how we used to do it. I increased it to four a year, because it always seemed like we had people who missed out. We're planning a vacation in October so the fall class will be in September or November, and I'll have to coordinate with the VE team.

2027. Effigy Mounds Activation

Yahoo group: rochester_hams
Date: 2016-03-07 15:46:58 UTC
From: k0rgr@...
Topic: 2027 Message: 2027

Received this in my email this morning -

Fellow amateur radio operators,

Rural Iowa Amateur Radio Club in northeast Iowa is planning a National Parks on the Air (NPOTA) event at Effigy Mounds National Monument near Marquette and Harpers Ferry in northeast Iowa.

We will be operating from the park over Memorial Day weekend, Saturday May 28-Monday May 30, 10AM-4PM.

We realize that there may be other hams that want to operate a radio for a NPOTA event, but didn't want to go alone or don't have equipment to setup a portable station. Because of that, we are opening up this activation to any other hams that want to come and join us.

Due to space and other park restrictions, we think we will only be able to have 2 HF stations running at a given time. We will have those setup, so you would only need to come and operate the radio. I don't have details on bands/frequencies we are going to operate at this time, I'm just gathering a list of those that want to come help operate during this period at this time.

Please contact n0zjt@yahoo.com if you are interested in participating and we can figure out a timeframe that will work for both of us. You can operate the radio as much time as you want. We also anticipate some interest from the public, so you can spend time talking with them and explaining amateur radio. We will have handouts for the public.

Feel free to distribute this to others as you see fit.

Thank you for your time.

Eric Grams, N0ZJT

From: rhyse4499@...
Topic: 922 Message: 2029

Hello everyone Rhyse here and I'm gonna need to to build a tower for my LJ-203BA yagi uda antenna. I am starting litterly from the ground up here....I have a rotor coming soonish(the guy wants me to answer some questions on what the rotors going to be on) it's a TR-44 rotor so I don't know if anyone has a mount I can use for that. Point being is its going to need a tower(20ft), tower base, tower top section, and some gywires would be nice(probably 4)The tower will be 20ft high with everything in it overall. If I'm leaving anything out please let me know. I being a jobless teen can't afford that much at the moment so that's why I came to the reflector to hopefully get some help. My asking price for all this stuff is a total of about $150. I know it's not a lot but it's all I got so it's worth a shot.
Thanks for reading and please leave in any helpful info, preferably understandable for a newbie like me. I'll also leave in a PDF/link in this post or the next of the tr-44 manual.

73, KE∅FMX (Rhyse)

Subject: [rochester_hams] Tower

Hello everyone Rhyse here and I'm gonna need to to build a tower for my LJ-203BA yagi uda antenna. I am starting litterly from the ground up here....I have a rotor coming soonish(the guy wants me to answer some questions on what the rotors going to be on) it's a TR-44 rotor so I don't know if anyone has a mount I can use for that. Point being is its going to need a tower(20ft), tower base, tower top section, and some gywires would be nice(probably 4)The tower will be 20ft high with everything in it overall. If I'm leaving anything out please let me know. I being a jobless teen can't afford that much at the moment so that's why I came to the reflector to hopefully get some help. My asking price for all this stuff is a total of about $150. I know it's not a lot but it's all I got so it's worth a shot.
Thanks for reading and please leave in any helpful info, preferably understandable for a newbie like me. I'll also leave in a PDF/link in this post or the next of the tr-44 manual.

73, KE∅FMX (Rhyse)

2033. Skywarn trainng

UDRC Price and Availability
by k7udr |

There has been a lot of interest in the UDRC, Universal Digital Radio Controller, that we showed at MicroHAMs recently.The UDRC will sell for $89.95 including a 3' HD15 M/M Cable for direct connection to the Yaesu DR1-X repeater and a 6' Mini DIN-6 Cable to connect to a standard Radio Data Port. It works with a Raspberry Pi 2 or 3 (NOT Included). We will make them available for sale by the end of April along with a downloadable image. All software is open source and will be available on GitHub, at product release.The display we showed is available from Adafruit:3.5" TouchscreenAnd the Rack Mount Case came from BHPhoto:2U X 6" Rack Mount Case k7udr | March 25, 2016 at 7:13 am | Categories: News, UDRC | URL: http://wp.me/p2mAAP-LR

From: steve wiebke
Topic: 1435 Message: 2055

We are scheduled for Highway 52clean up this coming Saturday April 16th. We are using the same protocol for this event as we do for other public service activities during the year. Go to the new RARC web site and under the RARC header there is the word "activities". click on it to open the "public service" link that takes you to the sign up page. Fill it out as you have before.
I am getting a lot of verbal commitments to this event, please take the time to sign up so we can plan how we will proceed. The more sign ups the shorter time to complete. If you are having problems getting to the new RARC web site contact me at W0STV@... and I will add you to the list
Thanks in advance for your time.
Steve-W0STVARES-AECThe more preparation, the less confusion.

We have one more session for the Hwy 52 clean up to complete our contract for 2016 with the DOT highway project. We did not finish on April 16th. There was so much garbage to pick up. I found out our section had not been cleaned up for almost 2 years. The next two years should be easy.
I am proposing May 14th to complete the last areas for trash pick up. Give me your for feed back via e-mail, on the Sunday night nets, if this date works for you.
Thanks to the people that helping this month, DOT was impressed with the areas we were able to clean up.

Reminder we have a Rochester/SE MN 10 meter net TONIGHT 8pm on 28.325 upper side band.
We've had good turnouts of 4-6 checkins during April, so on a cooler gloomy night please stop by.
(If we continue to regain traction on this I won't put out more reminders). 73 Dave K0VH

2071. DMR Repeater in Rochester

Yahoo group: rochester_hams
Date: 2016-04-28 00:25:51 UTC
From: k0rgr@...
Topic: 2071 Message: 2071

I just talked with Adam, KD0OUZ in Faribault. Adam is part of a group that is putting up DMR repeaters around southern Minnesota, and linking them.

The equipment has been purchased, and is on the air and running in test mode in Faribault, with plans to install it on a tower just north of Rochester. This repeater will be linked into a network of DMR repeaters that now covers the Twin Cities and Faribault. You can see the coverage on the mndmr.net web site.

Yes, just like DSTAR or Fusion, you will need a special radio to do DMR (what else is new?). The big difference here is that DMR radios are made by many different manufacturers, and prices for entry level radios are very low.

If you go to connectsystems.com, you can see their line of 'amateur' DMR radios. They start at $130 for a UHF DMR radio. It is also possible to recycle commercial DMR radios for ham use. Adam says that the Motorola units start at about $300 and have a big advantage - as you move around, they can automatically connect you to the nearest repeater!

Programming DMR radios looks like an adventue in itself, but Adam pledges to help people with that task, with whatever radio you choose.

So, they are awaiting final approval from the repeater site owner. Once that's happened, they will set up the repeater. Someone from the group will be looking to make a presentation at an upcoming club meeting.

Stay tuned....

2075. 10m net tonight 8pm

Yahoo group: rochester_hams
Date: 2016-05-03 14:24:31 UTC
From: dcnaatz@...
Topic: 2075 Message: 2075

I'll give out a call for the Rochester / SE Minnesota 10 meter night tonight at 8pm on 28.325 upper side band.

Here's a technical topic: ways to find warm weather eskip conditions. My case from last week was despite solar flux < 100, I copied a 5 watt CW beacon S7 on 28.260 from NH. Band was dead otherwise so probably eskip and since I'm retired I can get on the air at 11am when others can't. So I started calling CQ around 28.310 side band. After about 10 minutes worked a VE2 near Montreal S9. Later in afternoon worked others in NE on psk31 and heard via K0RGR the weak signal mode JT65 had other stations on. Another good tip for those that cannot copy CW, go to the top of the band and listen for 10m FM stations and repeaters.

What's this 10m FM all about? Here are the basics, but if there is interest I'd suggest we have that discussion on May 17 (I've worked mobiles in Europe and Japan direct that way, no DSTAR or Echolink needed):
Repeater Input Channels: 29.520, 29.540, 29.560, and 29.580 MHz.
Simplex Channel, Worldwide calling FM: 29.600 MHz

Repeater Output Channels: 29.620, 29.640, 29.660, and 29.680 MHz.

Remember, no net next Tues May 10 since we have an RARC meeting that night.

If by chance we do have a T storm in the area tonight use your judgement on operating and hooking up an outside antenna (that's true for the entire summer).

Dave Thompson informed me we had a cancelation in our Dayton hamfest group. We have a seat open on the plane to Dayton from late morning May 19 through the 22nd, afternoon wheels down in Rochester. It is an estimated four hour flight. The cost is $275.00 to $300.00 for the flight, on a 4 seat plane, (from Rochester), the motel room (3 nights double occupancy), your ham-fest ticket, and our group ground transportation (van with a driver) and event parking costs. Meals not included.
Sunday is a morning tour of the air force museum (ticket not included in the cost)
If interested contact Steve Wiebke at 254-3993 or at W0STV@.... Thanks for your time.

Steve-W0STVARES-AECThe more preparation, the less confusion.

2078. Skywarn maps urgent information

It looks like you should be able to work DMR from well south of Spring Valley to well north of the Twin Cities metro. Rumor has it that if you have the right DMR radio - a Motorola - it will automatically switch repeaters as you travel.

I plan to investigate as soon as I can figure out which DMR radio to get.

I sent another item around earlier about a new rig to be demo'd at Hamvention that does all the popular DV modes, and can convert from one to the other, such as DSTAR to DMR and vice versa. This looks like a solution to the problem of all these incompatible protocols.

Representatives of the DMR group will be at Tuesday's meeting to enlighten us!

2085. CW Operators Wanted!

Yahoo group: rochester_hams
Date: 2016-05-11 15:47:16 UTC
From: k0rgr@...
Topic: 2085 Message: 2085

Someone approached me at a club meeting some months back, wanting to operate CW with us this Field Day, and I've completely forgotten who it was.

So far, I have had no luck finding other CW ops for our Field Day. The usual suspects are either operating elsewhere or out of town that weekend.

We've decided to go down to a Class 2A entry this year, with one dedicated SSB station and one split between CW and digital. That's going to be a big drop in points, and put us in competition with some other 'big guns' in class 2A. It would be great if we could at least come up with enough operators to keep it at full output for the whole 24 hour period.

So, who wants to help out in the CW station?

It might not be realistic for this year, but how many would be interested in learning to do CW? I'd be willing to spend some time working with people on their code speed and contest operating techniques if it will encourage you. NOTE: you don't need an Extra Class license to do this. A Tech or Novice can do CW on all the bands we use on Field Day except 20 meters.

I could also set up the station so that someone with limited CW ability could do 'hunt and pounce' using a computer to assist copying the code. It might not be as productive as running strings of stations, but it could certainly contribute to our score.

Another thing to look for at Dayton! Oh, I hope this is a real rig. Their HT version looks amazing, too...the HT is similar to one that's been kicked around at TAPR Digital Conferences for the last few years - basically an Android device that runs apps - one of which is a dualband digital voice radio.

Thanks, Sharon - I'll be happy to work with you on this. We can do most of it over the air, but if you can come over, we can get you started here.

Is there anybody else out there that wants to learn the code and/or CW contesting?

SOAPBOX MODE ON

Yes, CW is ancient. But it's the one mode you can do without a computer that will really get through under terrible conditions. It's also the only mode where you can carry a fully capable HF station around in your shirt pocket. With the exception of Baofengs, low power CW rigs can be obtained for less than the cost of a decent HT.

If you ever learned to type, you can probably learn CW. It just takes practice, practice, practice.

SOAPBOX MODE OFF

I think we should also try to get some more people wanting to do digital modes on Field Day, so they can get comfortable with it.

For those of you that do not know any code, I suggest the “Gordon West” set of audio tapes. That is how I learned. Available through Amazon and other places as well. Buy the “0-5 In Depth Morse Code Learning Course”. I dod many years ago (still have my CD’s!) and the guy is great! So easy to learn through this system. Starts out nice and slow, and will easily get you to 5 WPM. Takes just 20 minutes per sitting, twice a day!

CW is a blast and you’ll really enjoy it.

Have fun!

Bill,

I'd be interested in getting better at CW. I'm not sure how much time I have to devote to learning, but I'm willing to try and get something on the schedule.

Thanks, Sharon - I'll be happy to work with you on this. We can do most of it over the air, but if you can come over, we can get you started here.

Is there anybody else out there that wants to learn the code and/or CW contesting?

SOAPBOX MODE ON

Yes, CW is ancient. But it's the one mode you can do without a computer that will really get through under terrible conditions. It's also the only mode where you can carry a fully capable HF station around in your shirt pocket. With the exception of Baofengs, low power CW rigs can be obtained for less than the cost of a decent HT.

If you ever learned to type, you can probably learn CW. It just takes practice, practice, practice.

SOAPBOX MODE OFF

I think we should also try to get some more people wanting to do digital modes on Field Day, so they can get comfortable with it.

If you have learned CW to say 5WPM and want to progress the Morse-It app for iOS is neat. I do not recommend it as a first introduction but is a good practice program. There is a free version to check but the extra features of the pay version is hard to resist.

From: k0rgr@...
Topic: 2093 Message: 2093

OK, as of this morning, I have Sharon, Peter, and Mike KE0EML as fledgling CW ops.

The MorseIt app is a good one for building code speed. Peter and Mike, you might want to investigate that.
For initially learning the alphabet, Just Learn Morse Code looks like a good one to me - it runs on PCs.

When just starting out, I found three sessions a day of 20 minutes per session was best.
For building code speed and learning the procedures, actually using the code on the air is the best way. We will work on that.
We can do it all on 2 meters, if you want.

Kelly informed me this morning that the N1MM logging software we're using has the capability to copy Morse Code as well as send it. I will investigate this as an aid for those wanting to help out who aren't big CW contesters. I'm confident that between that and the digital modes, we can make a lot of points on Field Day from station #2.

2094. DMR First Impressions

Yahoo group: rochester_hams

From: k0rgr@...
Topic: 2094 Message: 2094

OK, I received the DMR radio that I mail ordered earlier in the week, and registered for a DMR ID number, which you need to get on the network.

I had some initial problems getting the software for the new radio loaded. It doesn't work or look like most programming cables - when it's actually working, the computer sees the radio as a separate device, not as a COM port. I had to use a WIndows 7 laptop that I have to get the software set up. Once that was done, it took about two minutes to download the 'code plug' from the Minnesota DMR Group web site, and put it in the radio.

Then, I spent a little time figuring out how to navigate in the radio. The first thing was how to switch 'Zones'. A zone is a repeater, essentially. There are two zones set up on the local repeater. I have found the most use for the RCH DMR zone.

On each zone there are two time slices - that is, two channels that are shared between two different conversations that take place at one time. One time slice is dedicated to the North America talk group - a group that can be accessed from most DMR repeaters around the country. The second time slice is available for other talk groups. Think of a talk group like a 'reflector' on EchoLink or IRLP, or a 'chat room' on the Internet. If you're on one talk group, you aren't hearing the other talk groups on the same repeater.

There are two zones set up just for scanning on the radio I have. You can scan all the repeaters and all the talk groups, or just the local talk groups on all the repeaters.

I find most of the activity here is on the Minnesota Statewide talk group. This is a lot like the Minnesota Reflector on DSTAR - in fact, a lot of the same people on both. I've had several really nice chats with people in the Twin CIties and Faribault. I'd say activity level is a bit less than on DSTAR right now, but in the evening, it seems to pick up substantially.

This morning. I got on the North America calling talk group, and worked people around the country. I heard some Europeans on the Worldwide talk group, so I know it works.

One of the guys in the Twin Cities mentioned this morning that the radio I paid $133 for on Amazon can be had for $110 on EBay. It's the TYT MD380. It's also carried at Radio CIty in Mounds VIew, at about the $130 price, so if you want to support your local ham radio dealer, that would be the place to go for one.

Hope to see more locals on the Minnesota Statewide talk group, and some of the RCH Local ones.

Looks like you got the cheapest DMR radio on the market? Would you recommend that radio or getting something a little better?
Are there any capabilities you wish you had with this radio?

Well, I'm still so new to this, I haven't learned about features that I would like to have and don't yet. The only thing I know a Motorola does that mine won't is 'roaming', but I'm used to manually switching repeaters as I move around, anyway, and this has a couple of scan options that let me monitor all the repeaters and all the talk groups, anyhow

Haven't tried it on analog, but lots of folks do use them there. I would program John's UHF repeater into it, but they are rebuilding the DMR 'code plugs' to include it anyway, so I think I"ll just wait for their work. Mine is programmed to do all the DMR repeaters, and all the UHF analog machines in the Twin Cities and western Wisconsin. I haven't had an occasion to try it there yet.

There are supposed to be some new rigs at Dayton that might be worth waiting on - Baofeng has announced a dual band DMR/analog radio in the same price class as this one. I think the Tytera is an excellent quality radio - I don't know about a Baofeng.

A group out of Austria has pre-announced something they call NEW RADIO, that is alleged to do all the popular digital voice modes, DMR, DSTAR, FUSION, and others. There is also something called the DV4mini which is a gateway that can do all the modes, and convert from one to the other.

But, for right now, I like the Tytera. They also have a new model, the MD-390, and the only difference I see is that one has a built in GPS. I'm not sure what the GPS can be used for - it doesn't do APRS.

I just worked K0UC - my first 'local' on the Rochester machine. Brady knows much more than I do about DMR, so he can answer more questions. He has one of the CSI HT's.

I had an exchange with one of the first guys to import the Tytera DMR radios, out in Las Vegas. He laments the fact that DMR has grown now to the point that not everybody is a commercial two way radio geek anymore. He also says the Tytera is running 'flat out' to do what it does. That guy also won't allow Baofengs on his analog repeaters. I had to tell him about the dualband Baofeng DMR radio, and 'there goes the neighborhood'.

Topic: 2094 Message: 2099

Yes, they got me on that one - the Baofeng is an April Fool's joke. Rats - that's the problem with all the proposed multiband/ multimode radios so far - they turn out to be jokes or vaporware. I don't know if we will ever see a dualbander, there isn't any market for them in the commercial world, which is where DMR lives.

We're supposed to see a CSI7000 at Dayton, along with that DV4 radio and one called 'New Radio'.

Took a trip to the Twin Cities yesterday, using my DMR HT inside the car - no external antenna. The Rochester DMR repeater was usable until just before the hill that drops down into Cannon Falls. A few miles on the other side of Cannon Falls, the Buck Hill repeater in the Twin Cities starts booming in. On the way back, I was in a QSO much of the way, only losing it around Cannon Falls.

While at Mall of America, I got on an analog UHF repeater at the U of M, and got a good signal report, so yes, it works analog just fine. Of course it's UHF only, so around here, that means you can work the DMR repeater and KA0MYG's Fusion repeater in analog mode. There are multiple 'talk groups' you can access on the DMR repeater. I am on the MN Statewide and the North America talk group most of the time. You can set your radio up to scan the talk groups, repeaters, etc..

2100. CW Ops

Yahoo group: rochester_hams

From: k0rgr@...
Topic: 2093 Message: 2100

I'd like us to get together and practice using the computer to do CW contesting prior to Field Day. There is a good opportunity coming up the 28th and 29th of May - the CQ WW CW DX Contest. This is a great opportunity to practice making contest contacts with the N1MM software.

I've almost got the N1MM set up with my IC7410. For CW, it uses FLDIGI to receive the code and N1MM keys the transmitter directly, using an external WINKEYER. This will be reat for 'hunt and pounce mode' which is how I expect it to be used.

Again, it will probably help a lot if operators can at least copy a little code by ear, but might not be essential.

Meanwhile, those who've volunteered to learn/improve at code, I haven't forgotten, I'm just busier than usual.
Can one of you suggest a convenient time when we could meet on the air?

For learning the code, I think the program 'Just Learn Morse Code' is a good option. Just Learn Morse Code http://www.justlearnmorsecode.com/

You can start out by playing around with the program. It starts off sending two characters over and over again to get you used to them. I would start by turning on the feature that displays the text as it sends it, under 'Options'. Practice the first two letters until you recognize them. Then add another character, and practice with those three letters until you know them all. Then, add another letter. Learning to copy Morse Code is like learning to read, but you are seeing with your ears, not your eyes. The way you learned the alphabet was that your teacher had you do one letter at a time, adding another letter each day until you had them all. Learning the code is much the same.

Eventually, you will get to the point where you can tell it to start sending words. At that point, you are more than ready to get on the air.

Yes, using the computer to copy is not ideal, but FLDIGI will work well with computer sent code, and a lot of what's on in the contest is computer sent these days. The Field Day exchange is very short, too, which helps. I have tried using FLDIGI in a DX contest with the sound turned off just to see if it worked for me, and it did. I have not tried it on Field Day. I expect them to use 'hunt and pounce' rather than calling CQ and this station will be shared between CW and digital, so they will be able to switch to PSK31 or RTTY if they aren't having any luck with CW.

Hopefully, we can all get together and practice in the DX contest to see how it works or doesn't work as the case may be.

From: dcnaatz@...
Topic: 2111 Message: 2111

I am not in the contest but just worked 10 grids from Colorado all the way to Texas, Mississippi and Georgia using a dipole on 6m. I'm busy on Sunday but 6 meters is open listen from 50.125-50.2 for lots of SSB sigs.

Also, despite poor HF conditions 10m eskip has had some openings this past week, including S9 sigs into NY and PA last Thursday. 73 Dave K0VH (see you at RARC Tues and Gamehaven Field Day in 2 weeks)

2113. Parade information

Yahoo group: rochester_hams
Date: 2016-06-17 14:00:24 UTC
From: steve wiebke
Topic: 2113 Message: 2113

Parade is on June 24th starting at 6:20 PMAll roads for the parade will be closed at 4:00 PM.121 units are in the parade line up .Primary repeater to use 146.625 PL100. Alternate is 147.255 PL100All radio stations should be operational by 5:45 PM There are 3 PA stations plus KTTC to stage ham radios. All radio operators to check in when on station.
Paring of radio operators is for training and assisting reasons:
In the Mayo parking lot at 3rd AVE and 6th St SW:EM-50 pre and post parade NCS (W0STV), and emergency monitoring station for parade, operational at 4:30 PM.
NCS for the parade starting location at 3rd AVE and 6th ST SW... NOTE: Pick up parade script book at EM-50Dan N0KZO and Dennis KC0VIQ
PA #1 is MPR on south side of 6th Street between 4th and 5th AVE SW.Dave KB0UCN and Sharon KE0EQT
KTTC parade broadcasting.. In the Edison building parking lot, south side of 6th street between 6th and 7th AVE SWBob AB0BW.
PA #2 located on the west side of 7th AVE SW between 6th and 7th ST SW.Jim KD0ORO.
PA #3 located on the east side of 6th AVE SW between 11th ST SW and 8th ST SW (north of the triangle) or the south west side of Soldiers Field. This station has moved further north of last years location.Don KC0QGB and Rhyse KE0FMX.
Arrive early parking can be an issue. Please contact NCS if you have problems finding your location.Have radio power to operate for 3 hours. medium power should be OKHave ear buds or headphones to listen to NCS, the parade can get noisy.Have pens, pencils, post a notes or note pad to write down information and hand off to the PA stations. Bring water and a chair if needed.
If anyone else would like to be a part of this event to assist or learn public service please sign up on the RARC public service event page for the Rochester Parade.
If you need more information or you have radio issues during the parade call W0STV's phone at 254-3993

PS: Bob KC0GND your request to be excused from the sign up is list accepted.
Thanks for all your time and effort 73

Minnesota Governor’s Radio Amateur Proclamation

It gives me great pleasure to announce that Governor Mark Dayton’
office has issued an Amateur Radio Operator Recognition Days
proclamation. This is concurrent with our field day weekend.

Please go to this link and download and print your own copy and display
it at field day and at your club meetings.

http://mn-section.org/docs/GovernorsProclamation2016.pdf

We need to thank our ARRL MN Section PIC, Mike Sigelman, KØBUD for his
hard work and diligence in getting this done.

2118. CQ RARC Field Day - looking for more SSB operators

Yahoo group: rochester_hams
Date: 2016-06-22 14:52:19 UTC
From: dcnaatz@...
Topic: 2118 Message: 2118

Please head over to Gamehaven Scout camp (S of Hwy 52 on Co 1, talk in 147.255) to help Sat June 25 after 9am and Sun after noon to help antenna setups/takedowns. If you're not familiar with HF SSB the GOTA/GetOnTheAir station is just for you. If you are SSB savy I'd like a few more operators for that station - note this is not a high pressure contest, I'm more than willing to mentor you on the radio and PC logging software we use. Here's a tentative list of SSB operators:

Sat
1pm K0VH Dave, probably start off 20m in Run mode
3 or 4pm KC0CJP Drew (possibly with Kristin KD0EBU)
6-10 == OPEN (we usually fill this with the crew out for dinner, K0VH can mentor)
10pm NZ0S John*
? KC0WIJ Bryan (if you or QGB see this I need ur email, please email dcnaatz@gmail.com)*
3am or so KC0NPF BJ Watts*

Sun
?-1pm == OPEN, K0VH will be there to mentor after 7am
KE0DDX Barry is a mentee, helping log on PC and can find a time to operate

Note during daylight try and hourly check 10m 28.350 or beacons below 28.3 for sporadic e skip.
* I plan to be gone 10pm-7am so would like to email the overnight crew some ideas on bands & rig.

I know Bill K0RGR and Bob AB0BW are working to get more operators for the shared CW & digital station too.

If you have an April 2012 QST the Icom 9100 is reviewed in that issue so worth a skim if you plan to operate SSB, I'll have a copy @ FD. I have the RARC PC with N1MM logging software operating with my old Icom 746 so assume it should connect to the 9100 just fine, but about all we use that for is exact frequency logging (not required, just need to be sure we have the correct band). I'll also have a crib sheet of ARRL section abbreviations. The exhange is 2A (showing we have 2 main transmitters, a portable low power A) and the section for us to give is MN.

What I do not have is anything other than headphones and the mobile mic on the 9100. My Heil & footswitch setup is not movable from my 746. If by chance anyone on copy has a spare Heil mic/headphones headset that works on Icom please contact me.

If you do want to pre arrange an operating time please email me before Fri noon dcnaatz@gmail.com

73 Dave K0VH

Strong, Severe Storms Possible Late Saturday Afternoon-Evening

Issued By: NWS - Rochester-Alert
Issued On: 6/23/16 4:22 PM
Affected Jurisdictions:

THIS IS A Routine Press Release

A cold front will sweep in from the west late Saturday, and is expected to bring a line of showers and thunderstorms. At this time, a few strong to severe storms look possible during the late afternoon into the evening hours. Timing and location for the greater severe threat may change, so keep up-to-date with the latest forecasts, especially if you have outdoor plans.

From: k0rgr@...
Topic: 1295 Message: 2124

Just a reminder that we have two ARES nets on Thursday nights.

At 6:30 on the 147.255 (PL100) Rochester repeater, we have the SE MN ARES Net. This is the first Thursday of July, so the net will be a voice net this week.

At 8 p.m., on 3583.5 USB dial frequency, about 1200 on the waterfall (3584.7 center frequency) we have the MN Digital ARES Net. This net starts out using Olivia 8/500 protocol.

Both nets are open to everyone, and we discuss ARES, ham radio, and things of general interest.

Hope to see you there!

73,
Bill K0RGR

2125. This Saturday, Frontenac State Park

Yahoo group: rochester_hams
Date: 2016-07-07 01:09:50 UTC
From: Niel - W0VLZ
Topic: 2125 Message: 2125

Is anyone else planning to be at Frontenac on Saturday?

It looks like this Saturday will hold nice weather weather for us here in SE MN. I'm planning a little QRPxpedition to Frontenac State Park. It will give me a chance to try out my KX3 on PSK31. Elecraft's KX3 panadapter supports an attached keyboard and has a multi-line character display. I should have everything needed for digital modes without an attached computer...great for operating in the park.

This weekend the Minnesota DX Club also happens to be meeting at Frontenac. Each Summer they have a UHF/VHF DXpedition to Frontenac State Park. With the park location on a bluff 400 feet above the Mississippi River they primarily DX the FM, TV and UHF/VHF scanner bands. The NOAA weather radio stations from out of the state are also a specialty of some of the members. With the river and railroads nearby those bands are also monitored. If I need a break from HF I can wander over and see how they are doing.

2126. Tower

Yahoo group: rochester_hams

Topic: 2131 Message: 2131

This is a great event. The wife and I did the MS150 ride last month, and had a blast. This one is a longer event. If you want to see hams using a combination of different radio gear to provide support, this is the place to go.

Communications volunteer help for MS TRAM

Fri Jul 8, 2016 3:54 pm (PDT) . Posted by: "Chris Schultz" ctechy

This event is fast approaching and we need a bit more help. The ride is Wed July 20th through Sunday July 24th We have need for two SAG communicators for the whole event. That can be broken into shared time if necessary. We also have need for two Rest Stop communicators for Saturday and Sunday. If you are interested and/or have questions please contact me or Lissa Martinez <Lisandrea.Martinez@nmss.org> 612 335 7984 as soon as possible.

2138. RARC Mentioned in June Summary of ARRL Field Activities for MN

Yahoo group: rochester_hams
Date: 2016-07-18 20:30:03 UTC
From: Daniel Musall
Topic: 2138 Message: 2138

Everyone,

We were mentioned by Skip Jackson (KSØJ) and Frank Karnauskas (N1UW) in the June ARRL Field Activities Summary. Check it out below in red!

-------- Forwarded Message --------
Subject: June Summary of ARRL Field Activities for MN
Date: Mon, 18 Jul 2016 16:19:14 -0400 (EDT)
From: ARRL Members Only Web site <memberlist@...>
To: dmusall@...

++ ARRL MINNESOTA SECTION SUMMARY FOR JUNE 2016

This report is a short summary of Minnesota Section Field activities for June 2016. For more news and other activities please go the official Minnesota Section webpages at www.mn-section.org.

We have changed the leadership position in the MN ARES organization. On July 1, the Section Emergency Coordinator position changed from Dan Anderson, KD0ASX to Joe Reinemann, K0JCR. Dan planned his succession very well as he was able to search and select someone to succeed himself. In addition, he was able to allow the necessary time to prepare Joe to assume this position.

We should all thank Dan for his many years of dedicated service. In addition, I ask all of the ARES organization to support Joe in this new assignment. Joe will do a great job.

As section manager, I am very grateful to support this transition. Without Dan’s help in selecting Joe, this could have been a much more difficult selection process. Complete story and pictures on MN ARES website.

Field day was a great success even with marginal band conditions. It was my pleasure to visit 8 field day sites on Saturday. The weather threatened but for the most part did not develop any dangerous conditions.

Keep up to date with ARRL activities by checking their website often. The ARRL is our organization. We benefit greatly from their hard work and dedication to our “Hobby”.

Submitted by Skip Jackson, KSØJ, MN SM

++ MINNESOTA CLUB NOTES FOR JUNE 2016

AFFILIATED CLUB REPORT

+Field Day Publicity
We have may fine reports of successful Field Day activities and publicity opportunities. One of the best we have seen is from the Owatonna Steele County Amateur Radio Club (OSCAR). Follow the link below to see an interested feature story aired by the local cable television channel:

https://www.youtube.com/watch?v=SoDBsxcV58o&feature=youtu.be

If you have received any publicity, either in print or on-the-air, please send me some information so we can share it with the faithful.

+Rochester Special Service Club Congratulations to the Rochester Amateur Radio Club (RARC) for becoming our newest Special Service Club. Thanks to President: Daniel Musall, NØKZO who immediately took up the Section Manager's (Skip Jackson, KSØJ) challenge to apply for the SSC designation. It took Dan all of one day! Club presidents: Is your club Special Service Club eligible? Check the ARRL web site for the online application. The RARC also got their fair share of Field Day publicity. Check out this great evening news story that aired on Rochester's KTTC television: http://www.rarchams.org/

NTS liaison is maintained with the MN Section Noon Phone Net, Minnesota Section Noon and Evening Phone Net, PICO Net, SE MN Digital ARES Net, MN Digital.

ARES News
SEC Comments: June was a busy month for MN ARES with all districts reporting public service events and multiple Skywarn activations throughout the Section. In addition, most Districts reported Field Day activities and many used that opportunity to educate the public about the role of amateur radio and ARES in emergency communications and public service. Notable is the Northeast District's effort, which resulted in a total of 2,378 hours dedicated to ARES operations in June alone. Additionally, MN ARES added 11 new members throughout the Section in June.

We are currently evaluating the use of stand-alone Bulletin Board Systems (BBS's) to facilitate traffic exchange between MN ARES and partners for future exercises. ARES Members from several districts are accessing a Missouri ARES BBS that is not internet dependent to test capabilities and build experience with this system and assess potential applications within the Section.

Central District:
On 11 June 2016, the Otter Tail County ARES participated with the Lake Region Amateur Radio Club in planning for the MS Tram and Field Day.

Seth Erickson KD0SBV (Otter Tail EC) participated in the Otter Tail county Emergency Planning Committee.

The LRARC held field day at the local museum, utilizing a tower trailer, generator, and small but powerful solar powered rig on 20 meters.

Wadena County and WAARC members provided Skywarn support for three Severe Weather activations in June. The NWS Grand Forks did damage assessment for one event, and said that an EF-1 tornado had touched down north of Staples in Wadena County. The Sebeka and Bertha Linked repeaters worked very well during these operations.

Metro District:
Metro District ARES members participated in Field Day events, scheduled nets and the Blazing Star 4th Parade

Northeast District:
The Northeast District was exceptionally busy with public service events and other opeations.
Carlton County: Carlton Co. ARES
members provided radio support for Grandma’s Marathon and participated in Field day.

Crow Wing County: ARES supported the Tour of the
Lakes Bike Ride (900 riders)and participated in Field Day.

Itasca County: Itasca Co. ARES supported Skywarn activations on June 19, 17 and June 25 and provided damage reports to NWS Duluth. On June 11 NLARC operated the Judy Garland/Wizard of Oz Special Event Station at the Judy Garland Museum in Grand Rapids.
Koochiching
County: ARES activated Voyager’s National Park NP-54 on June 11 and had 10 members operating during the event, making 163 contacts on 20m meters. Additional events are being planned with NPS.

Lake County: Lake Co. ARES supported Health & Welfare
Communications for Grandma’s Marathon in Duluth. N0LCR provided assistance with Training, Launch, Tracking and Recovery for the Two Harbors High School Science Department STEM Class weather balloon launch on June 23.
Pine County: The Duxbury repeater is still down. MRC has given approval

for a new coordinated VHF pair.
St. Louis County (S): June was a very busy month with a VHF/UHF event, Grandma’s Marathon and Field Day. There were also a several Skywarn activations.

Northwest District:
Clay County: Clay Co. ARES has been promoting Amateur Radio at the Hawley Lion's Breakfast on the Farm near Rollag, MN. Members worked a satellite pass with a 70cm handheld yagi and an HT and about a half dozen spectators requested additional amateur radio information.

On June 14th Clay Co. ARES gave a presentation to local Emergency and Safety Personnel at their quarterly Breakfast Club meeting about how Amateur Radio might assist them. KA0Q spoke on role of ARRL, ARES, and gave examples from the 2009 flood response in Fargo-Moorhead.

Polk County: Polk Co. ARES supported two Skywarn activations during the month of June.

South Central District:
South Central District supported two Skywarn activations in June. ARES members provided storm spotter reports during these wind/hail events and reported storm damage to the Weather Service following the storm.

Blue Earth County: Blue Earth Co. ARES took lead role supporting a 100 mile bike race in Mankato this month. This was the first event of its type in Blue Earth County and communications was closely coordinated with North Mankato police and event organizers. The ARES team received a letter commendation from the Police Chief for there work and will be invited to support other events later this summer.

Sibley County: Sibley Co. ARES activated the EOC Communications trailer for net control operations during the above mentioned bike race in North Mankato. The trailer was also serviced prior to activation to ensure that systems and equipment was in good working order.

Le Sueur County: Jim Hammock, KI0DN, will be stepping into the role EC for Le Sueur County ARES. Jim and is currently working with the County Emergency Manager to enforce amateur radio infrastructure in the County and provide additional training and licensing classes to ARES members and all licensed amateur radio operators.

Southeast District:
Goodhue County: ARES participated in the Excel Energy/County power plant drill with Nuclear Regulatory Commission, City and County emergency and public safety personnel.
Olmsted County ARES had two public service events - the Rochester HyVee Triathlon, and the Team Red CC Run. ARES also supported one SKYWARN activation as a series of storms with a tornadic history moved through the County.

Southwest District:
ARES groups in the Southeast District were kept busy with numerous Skywarn activations for tornado warnings and severe storms. Pipestone Co. ARES assisted with an evacuation of nursing home residents in the path of a storm.

EC’s must complete their FSD-212 form and submit it to their DEC’s (or the SEC if there is no DEC) by the 2nd of the month. DEC’s must submit to the SEC by the 10th of the month.

An explanation on how to fill out the FSD-212 form can be found at www.MinnesotaARES.org.

RESPECTFULLY SUBMITTED: Joe Reinemann, K0JCR, MN ARES ASEC - Operations

Just a reminder that the club picnic is THIS Tuesday at the KOA campgrounds just south of I-90 off of US-52.

The burgers, brats, hot dogs and buns have been purchased! (Also the ketchup, mustard and pickles.) We will have plates, napkins, plastic ware and trash bags available.

What you need to bring:
A dish to pass for the group Chairs and beverages for your group/family There is a slight chance of rain in the forecast after 1pm. There also has been a slight change in activites as AB0BW will not be able to attend so the foxhunt has been cancelled.

If you have any questions or comments, reply or contact me!

See you at the picnic!

Dan, N0KZO

Has anyone else encountered the interface to Yahoo groups yet?

It looks like it is now forcing you to log into Yahoo's main site, where you will be greeted by all kinds of ads for their services. Then, you can start searching menus to find your groups. Yahoo also upchucked on my security settings, making it even more fun to log in.

If they continue to make it harder to use, I think we'll go elsewhere.

From: dcnaatz@...
Topic: 2154 Message: 2154

For those within 40 mi of Rochester, how about an informal net/roundtable tonight at 8pm on 28.325 upper side band?

Last week we were in the middle of another electrical storm, but chances for rain are predicted to be zero tonight. And the mosquitoes are TERRIBLE since the end of last week, so I suspect most of you won't be out that late walking the dog. Perhaps we can get this net going in the Fall/Winter darkness on non-RARC nights.

As for a topic, hmmm, 10m has been pretty stinky lately. If any of you have found some eskip openings the past couple weeks join us to please discuss. Anyone make any interesting HF QSOs in August, new DX, NPOTA, SOTA or IOTA? If you don't know what those acronyms mean, join us at 8pm for answers.

2166. New DSTAR ID-51A HTs on sale @ HRO

Yahoo group: rochester_hams
Date: 2016-09-11 14:41:48 UTC
From: dcnaatz@...
Topic: 2166 Message: 2166

I spotted this on a DSTAR forum this morning from HRO hamradio.com @ just Milwaukee, the old AES.

ICOM ID-51A Blue LE-A ID-51A Blue Limited Edition 50th Anniversary Radio

HRO Discount Price: $249.95*

This is a 144/440 5W HT for both analog FM & DSTAR digital.
It's one of the newer easy to use radios with a built in GPS (ie, you also get the APRS tracking via DPRS).
I have the 440 only ID-31, so this is a great value in a high quality 2 band radio as most of MN DSTAR is on 440 but if you venture out of state most WI DSTAR is on 2m. Plus use it on all our 2m FM repeaters.
You don't need the programming cable as I've programmed my ID-31 via it's microSD in a PC just fine.

They'll probably sell out of these fast, then the regular ID-51A is $299 w/rebate.

SB QST @ ARL $ARLB032
ARLB032 Amateur Radio Parity Act Passes in the US House of
Representatives

ZCZC AG32
QST de W1AW
ARRL Bulletin 32 ARLB032
From ARRL Headquarters
Newington CT September 14, 2016
To all radio amateurs

SB QST ARL ARLB032
ARLB032 Amateur Radio Parity Act Passes in the US House of
Representatives!

"The bill is passed without objection." With those words, Amateur Radio history was made on September 12, when the US House of Representatives approved the Amateur Radio Parity Act, H.R. 1301 on a voice vote under a suspension of the rules. The focus of the campaign to enact the legislation into law now shifts to the US Senate. The House victory culminated many years of effort on ARRL's part to gain legislation that would enable radio amateurs living in deed-restricted communities to erect antennas that support Amateur Radio communication. The measure calls on the FCC to amend its Part 97 rules "to prohibit the application to amateur stations of certain private land-use restrictions, and for other purposes." While similar bills in past years gained some traction on Capitol Hill, it was not until the overwhelming grassroots support from the Amateur Radio community for H.R. 1301 shepherded by ARRL that a bill made it this far. The legislation faces significant obstacles to passage in the US Senate, however.

"This is huge step in our effort to enact legislation that will allow radio amateurs who live in deed-restricted communities the ability to construct an effective outdoor antenna," ARRL President Rick Roderick, K5UR, said. "Thanks to everyone for their help in this effort thus far. Now we must turn our full attention to getting the bill passed in the Senate."

ARRL Hudson Division Director Mike Lisenco, N2YBB, who chairs the ARRL Board's Legislative Advocacy Committee, has been heavily involved in efforts to move H.R. 1301 forward. "This has been a multiyear effort that is finally seeing some light," he said. "The passage of the bill in the House is a major accomplishment, due to the hard work of so many - from the rank-and-file member to the officers and directors."

Lisenco said it's not a time to rest on our laurels. "We are only halfway there. The focus now shifts to our effort in the Senate," he said. "We are beginning a massive e-mail campaign in which we need every member to write their two Senators using our simplified process. You will be hearing from President Roderick and from your Directors, asking you to go to our 'Rally Congress' page. Using your ZIP code, e-mails will be generated much like our recent letter campaign. You'll fill in your name and address and press Enter. The e-mails will be sent directly to your Senators without you having to search through their websites."

The "Rally Congress" web page can be found at, https://arrl.rallycongress.net/ctas/urge-senate-to-support-amateur-radio-parity-act .

Lisenco said getting these e-mails to members' Senators is a critical part of the process. "Those numbers matter! Please help us help you by participating in this effort," he said.

As the amended bill provides, "Community associations should fairly administer private land-use regulations in the interest of their communities, while nevertheless permitting the installation and maintenance of effective outdoor Amateur Radio antennas. There exist antenna designs and installations that can be consistent with the aesthetics and physical characteristics of land and structures in community associations while accommodating communications in the Amateur Radio services."

During this week's limited debate, the House bill's sponsor, Rep Adam Kinzinger (R-IL), thanked ARRL and the Community Associations Institute (CAI) for reaching an agreement to move the bill forward "in a bipartisan and very positive manner." He pointed out to his colleagues that Amateur Radio antennas are prohibited outright in some areas.

"For some this is merely a nuisance," Kinzinger said, "but for others - those that use their Amateur Radio license for life-saving emergency communications - a dangerous situation can be created by limiting their ability to establish effective communication for those in need."

Kinzinger said that in emergencies, hams can provide "a vital and life-saving function" when conventional communication systems are down. He also praised the Military Auxiliary Radio System (MARS), a US Department of Defense-sponsored program, comprised largely of

Amateur Radio volunteers, that also supports communication during emergencies and disasters.

Cosponsor US Rep Joe Courtney (D-CT) also urged the bill's passage. "This is not just a feel-good bill," Courtney said, recounting how Hurricane Sandy brought down the power grid, and "we saw all the advanced communications we take for granted...completely fall by the wayside." Ham radio volunteers provided real-time communication in the storm's wake, he said, saying the legislation was a way "to rebalance things" for radio amateurs who choose to live in deed-restricted neighborhoods by enabling them to install "non-intrusive antennas."

Courtney noted that he spoke recently with FCC Chairman Tom Wheeler, and said that Wheeler "strongly supports this legislation."

Leading up to the vote, Rep Paul Tonko (D-NY) also spoke in support of the legislation, calling it a commonsense approach that would build "fairness into the equation for Amateur Radio operators" in dealing with homeowners associations.

The earlier U.S. Senate version of the Amateur Radio Parity Act, S. 1685, no longer is in play, and the Senate is expected to vote by unanimous consent on the version of H.R. 1301 that was adopted by the House on September 12.

Drone videos from the W0AIH MWA "superstation" installation just SE of Eau Claire WI.
I watched the first 9 min video (no talking but nice peaceful music with it) and then clicked on the DJI0147C 12 min video that was in the bottom left showing the 75/80m beam installed (there are shorter videos too).
Apparently Paul W0AIH 82 years old is in the red coat on the boom; he gave talks at both the W0DXCC RCTC convention we hosted and at an RARC meeting about 5 years ago.

Be sure to watch these full screen on a big PC monitor; I don't like heights so they about did me in - wow!

My history on "the farm" is a visit with son Drew around 6 years ago to operate ARRL DX SSB.
Paul gave us a great tour of this multi multi setup with I'd guess around 40+ towers he gathered most as surplus commercial towers. I know a few others from Rochester have operated there too. If you drive by on I94 you can see it but not as impressive as being there or from that first drone video.

It's just a hobby! 73 Dave K0VH

Subject: [rochester_hams] 75m 3el beam videos at W0AIH "the farm"

I spotted this on qrz.com 9 VIDEOS of Installing a 3-Element 75-Meter Yagi Antenna at Contest Station W0AIH 9 VIDEOS of Installing a 3-Element 75-Meter Yagi Ant... It was a perfect day with low winds and great drove videos of the install by N9QIP at the site. To learn all about the Contest Station W0AIH go to the... View on forums.qrz.com Preview by Yahoo Drone videos from the W0AIH MWA "superstation" installation just SE of Eau Claire WI.I watched the first 9 min video (no talking but nice peaceful music with it) and then clicked on the DJI0147C 12 min video that was in the bottom left showing the 75/80m beam installed (there are shorter videos too). Apparently Paul W0AIH 82 years old is in the red coat on the boom; he gave talks at both the W0DXCC RCTC convention we hosted and at an RARC meeting about 5 years ago.
Be sure to watch these full screen on a big PC monitor; I don't like heightsso they about did me in - wow!
My history on "the farm" is a visit with son Drew around 6 years ago to operate ARRL DX SSB.Paul gave us a great tour of this multi multi setup with I'd guess around 40+ towers hegathered most as surplus commercial towers. I know a few others fromRochester have operated there too. If you drive by on I94 you can see it but not as impressive as being there or from that first drone video.
It's just a hobby! 73 Dave K0VH

I found this dish out selling scout wreaths. I asked the lady who was throwing it away if I can take it and see if one of my ham radio comrades could use it for radio stuff. Obviously she said yes. Anyway, it's free for grabs so just email me if you want it.

My Email: rhyse4499@ hotmail.com

  US MARS 60 meter Comm Exercise 31 October 2016
I received this notice yesterday. It includes information about a 5 MHz "MARS broadcast" FREQ: 5330.5KHz USBTIME: 0300-0400 Hrs UTCDATE: 31 October 2016-Bonnie KQ6XA
"Subject: Military Auxiliary Radio System to Conduct Interoperability Exercise with Amateur Radio Community, COMEX 16-4 From 30 October through 1 November, members of the Military Auxiliary Radio System (both branches)will be conducting a quarterly Department of Defense Contingency Communications exercise. The purpose of this quarterly exercise is train on our ability to provide communications following a “very bad day” scenario when traditional forms of communications will likely be unavailable. While the simultaneous loss of all communications nation-wide is not likely, for training purposes, we are assuming there has been a massive nation-wide outage.
One of the objectives of this exercise is to continue the partnership with the amateur radio community to help provide information about local conditions and send this information to the Department of Defense to help understand what is happening around the United States. During this exercise, we will use 60 meters, local VHF and UHF repeaters as well as HF NVIS amateur radio bands. Our goal is to have a conversation about the local conditions in and around your county. During the conversation, our operators will be asking basic questions such as the status of commercial power, public water systems, and road conditions. These will be person to person conversations…you don’t need to use any digital modes or know any special messaging formats.
To kick off this exercise, we are encouraging the amateur radio community to monitor 5,330.5KHz from 0300-0400 Hrs Zulu on 31 October. During this hour, we will be doing a high power voice broadcast from a military station on the east coast and alternate with a voice broadcast from the west coast. Amateur radio operators are encouraged to submit a reception report as indicated in the voice broadcast.
For the remainder of the exercise, MARS personnel will be calling for amateur radio operators on the 60 meter channels as well as using already established amateur radio nets on HF NVIS and VHF/UHF repeaters. Amateur radio operators are also invited to attend the

ARRL webinar scheduled for 25 Oct at 2000 hrs eastern time where Dave Stapchuk, Chief AF MARS, and the Army MARS Program Manager will give a presentation about the MARS program. Please register for the webinar at: https://attendee.gotowebinar. com/register/ 4300481724544982273

2180. 10 meter net 8pm tonight (Tues)

Yahoo group: rochester_hams
Date: 2016-10-18 21:12:18 UTC
From: dcnaatz@...
Topic: 2180 Message: 2180

Just a reminder we'll have a short net tonight at 8pm CDT 28.325 mhz ... and probably the next few Tuesday's.
I have a conflict Oct 25 but will be on around 8pm +/- 5 minutes. I won't even pretend to pick a topic since we have tended to come up with our own at nets in Sept.
Reminder: Oct 29-30 is the CQ WW SSB contest. Check out 10 meters on Sunday afternoon if there is any hope for a band opening plus stations will be looking for new contacts by then.

2183. Winlink - 145.070 (packet)

Yahoo group: rochester_hams
Date: 2016-11-10 15:40:45 UTC
From: ddonovan125@...
Topic: 2183 Message: 2183

Folks,

I set up a Winlink packet gateway in Rochester at 145.070MHz.

If you are unfamiliar - Winlink provides email service via radio - typically contacts are made via software (RMS Express) and a TNC connection between radio and computer. If internet would be unavailable - winlink can operate as a mesh network of radios to transfer email.

If someone would like to try sending an email via the packet gateway at 145.070 I would be most happy to hear if it actually works.

RMS Express can be found for download via internet search.

TNCs are many - but kantronics, tinkytrak4, and signalink seem to work well.

For a sample subject line : //WL2K R/test

If more info is needed - please advise.

2184. Digital training

Yahoo group: rochester_hams
Date: 2016-11-12 22:20:07 UTC
From: steve wiebke
Topic: 2184 Message: 2184

This Saturday morning 6 amateur radio operators learned digital communications at the RARC BUG session at fire station #2. We learned how to communicate using two FLDIGI modes. You may have heard us on the 147.255 repeater. That was what the digital modes sound like. We are in the 21st century and need to be able to send and receive text messages, files and ICS form data. Each week on Thursdays we have an ARES voice and digital net on the 146.255 repeater at 1830hrs. If you have a computer with mic and speakers you can acoustically link the program from your radio. Give it a try. Thanks for attending. Steve-W0STVARES-AECThe more preparation, the less confusion.

2186. 10m net 8pm tonight using remote control

Yahoo group: rochester_hams
Date: 2016-11-15 15:05:24 UTC
From: dcnaatz@...
Topic: 2186 Message: 2186

I'd like to try my remote control setup on the 10m net tonight so join us 28.325 @ 8pm if you want to hear how I sound going through Skype. Not sure if I'll use my smartphone or newer Windows PC for the audio side but Splashtop is the remote desktop control.
While no latency (especially w/i my own home WIFI) it does take me a second to go from transmit to receive so bear with me on that. This approach from Aug 2015 QST works for SSB or digital ragchewing, I just would not try it for contesting or Dx pileups!
I used it multiple times this summer do operate HF from my deck and plan to use it from "down South" this winter as well.

Subject: ARRL Needs You to Help With A Final Push for the Amateur Radio Parity Act in this Congress

Dear ARRL member,

I am writing to you today because we are nearing the end of the 114th Congress and the efforts to obtain passage of The Amateur Radio Parity Act are at a critical juncture. With a few short weeks left to the year, we must get this bill passed NOW or we will need to start all over again come January 1, 2017.

As you know, thanks to your previous efforts, the legislative efforts scored a major victory in our campaign when the Amateur Radio Parity Act, H.R. 1301, passed in the House of Representatives on September 12th. The legislation is now in the Senate in two forms – as H.R. 1301 and alternately in the packaged bill S. 253. We still need every Senator to approve the bill.

You are one of over 730,000 licensed Amateur Radio Operators living in the United States. Many of you already live in deed-restricted communities, and that number grows daily.

We asked you for your help in September - and you responded in great numbers. We collected over 63,000 emails that were distributed to every single U.S. Senator. That is amazing. However, with the election hiatus over, each and every Senator must be reminded that their business is not complete until this important legislation affecting hams is passed and sent to the President.

Even if you wrote in the past, we need you to write again!

ONCE AGAIN I REMIND YOU THAT NOW IS THE TIME FOR ALL HAMS TO GET INVOLVED IN THE PROCESS!

- If you want to have effective outdoor antennas but are not currently allowed to do so by your Home Owner’s Association, PLEASE SEND THESE EMAILS TODAY!

- If you don’t live in a deed-restricted community but you care about the future of Amateur Radio, please support your avocation and your fellow hams and SEND THESE EMAILS TODAY!

We need you to reach out one more time to your Senators TODAY! Right away Right now!

Help us in the effort. Please go to this linked website and follow the prompts:

https://arrl.rallycongress.net/ctas/urge-us-senate-to-pass-amateur-radio-parity-act

Thank you.

73,

Rick Roderick, K5UR

ARRL - The national association for Amateur Radio®

Happy Thanksgiving to all our friends out there.
The National Weather Service (NWS) will be hosting SKYWARN Amateur Radio Recognition Day on Saturday, December 3rd from 8 a.m. - 4 p.m. We hope your groups and club members that help us out with storm spotting can visit that day and help us make contacts around the country.
We are gracious to have local club members helping us host and hope to have several HF rigs connected up. We are looking for volunteers that can help operate the radios for short stints and log contacts made.
Again - our special recognition for your groups is scheduled for Saturday, December 3rd.
We hope you can make it. Please help us spread the word. Let your club members know.
Thanks.

2200. Weekly Nets

Yahoo group: rochester_hams
Date: 2016-12-01 20:46:06 UTC
From: k0rgr@...
Topic: 2200 Message: 2200

After a brief hiatus, the Thursday night nets will resume.

Tonight is the monthly SE MN ARES Net - a voice net - at 6:30 on 147.255 repeater.

The MN Digital ARES Net will meet at 8 oclock on 3583.5 dial frequency, USB, Olivia 8/500 .

Hope to see you there.

Thanks again for helping out and/or stopping by for our annual SKYWARN Amateur Radio recognition day this past Saturday. We ended up making contacts in 39 states and with 33 other NWS offices.
I am building an event summary web page at: http://www.weather.gov/arx/ham2016
And in case you missed the local press coverage, WXOW was here to do a story that day:

http://www.wxow.com/story/33860933/2016/12/03/skywarn-amateur-radio-recognition-day

The following groups were present to help out Saturday:
- Riverland Amateur Radio Club
- Rochester Amateur Radio Club
- Winona Ham Radio Club
- Richland Co. ARES/RACES
- Monroe County SKYWARN
- Fillmore County SKYWARN
- La Crosse Co. Emerg. Management
And once again, I'd like to thank ALL those amateur radio operators out there who help us out passing along real-time weather reports.

Well,I tried to reply, but the first attempt failed.

The QYT7900 is not listed as being supported by CHIRP. They do support the QYT8900, and I don't know the difference.

I've been seeing a radio from Jetstream - the JT270M - a dualbander that is supported by Chirp. R+L Electronics has them for $99, which is pretty cheap for a U.S. dealer - some people are reporting an even lower price. It is always a good idea to buy from a U.S. dealer if you can. It's a dualbander. Quicksolver sells them as part of their 'HAMMO CAN' go kit.

I have a VV-898, which is from all indications the same radio as the JT270-M. I wouldn't buy another one. I generally monitor both the .255 and 2m simplex using dual watch, but this radio's dual watch is too slow to be useable in that role. Also, the squelch has also become useless, and especially in this town, it'll open up to just about anything. I'd rather go back to using a Baofeng with trucker mic as a vehicle radio.
I keep it in my Subaru still, but I almost never have it on because it's too annoying.
I'm thinking of trying a BTech UV-5001 next as a cheap car radio, but I might just drop the coin to buy another TM-D71A or TM-D710 for the car.

It does look like they are similar, the JT270MH is 25 watts vs. 10 for the Leixen, but they certainly look similar. The reviews on eham are very mixed, lots of fives and lots of zeros - looks like quality control issues - not surprising for a dualbander under $100.

There is a 50 watt Jetstream that doesn't look like the Leixen - the JT2705M. R+L seems to have them for $139. It is Chirp compatible. There is no eham review on this one.

The next one up from that would probably be the Tytera TH-7800 - $179 mail order and supported by Chirp.But it's a 50 watt rig. The TH-9800, for about $30 more, is a quad bander, and is also supported by Chirp. It would be fun to have a rig monitoring 29.6 MHz at times. Radio City used to carry this radio but not anymore as far as I can see.

If you want smaller, lower power, and cheaper, you can look through the Chinese fare. I thought Jetstream was a Korean company, but if they are, they hide it well.

I'll be on upper side band 28.325 at 8pm CT tonight for our local 10 meter net. Sure is nice it's warmed up but still pretty cold and dark to walk the dog that late, so you should fire up the HF rig then and check in. If you can't make it in but copy us, signal reports are appreciated to k0vh@arrl.net.

Topics are always open but I have a couple questions for N1MM and radio related software. Has anyone played with the upcoming ARRL RTTY RU contest, this one on Jan 7-8 2017? I've done it a few years with sporadic luck on best RTTY decoder software. This is RTTY not psk31. HR Deluxe DM780 works great but that is not a real contest logger. N1MM has a couple RTTY decoders like MMTTY that are touchy to setup. Does FLdigi have RTTY (and if yes, does it have a logger)? Again, we can chat about anything of interest, I just pose this as an idea.

I'm going to suggest we NOT have a net next week during a time some may be traveling or still have family home for the holidays, we can resume the net on Jan 3. 73 Dave K0VH

2219. 10m net 8pm tonite - RTTY anyone?

Yahoo group: rochester_hams
Date: 2017-01-03 17:43:30 UTC
From: dcnaatz@...
Topic: 2219 Message: 2219

Reminder: it is Tues despite it feeling like a Monday, so tonight is the Rochester SE MN 10m net 8pm on 28.325 upper side band. Let's do the net as normal on voice but if any of you have a way to receive RTTY using a sound card I would like to check out my afsk RTTY signal. The reason is this weekend is the ARRL RTTY round up contest which I'd like to operate and while I can use Ham Radio Deluxe DM380 based RTTY, I'd really like to use the N1MM contest logger which has a different MTTY or MVari RTTY software. If you'd like to download any of this software and try out the weekend RTTY RU I'd be happy to listen to your signal as well. RTTY is very similar to digital mode psk31 if you've used it or seen it at past Field Days - the computer does 90% of the work! If we are lucky there will even be some signals during the day around 28.100.

We had a great turn out for the bug event discussing winter field day operations. We have decided to hold another event next Saturday setting up digital modes in all the EOC computers.
If you have a ham radio and a laptop or smart phone you can operate digital communications with acoustical linking. Anyone may attend to have digital programs installed in their own computers and/or phones for emmcom use or for the digital net on Thursdays..
If anyone is missing some parts from the W0TAX sale items, they are at the Rochester EOC attached is a picture of the two items found.

Topic: 2227 Message: 2227

I just became aware of something that might be helpful for you VHF/UHF DXers. The VHF contest is this weekend, anyway, so it might be time to check it out.

The web page VHF Propagation Map http://aprs.mountainlake.k12.mn.us/# shows tropo openings based on recent APRS beacon receptions.

VHF Propagation Map http://aprs.mountainlake.k12.mn.us/# VHF Propagation Map This map shows actual radio propagation from stations operated near 144 MHz.

View on aprs.mountainlake.k12.mn.us http://aprs.mountainlake.k12.mn.us/#
Preview by Yahoo

I've known about that for quite a few years, but what I didn't know was that if you zoom in on an area, it shows you the stations that were heard and reported to APRS. In our area, KC0FOW apparently has a beacon running quite a bit. If you click on his callsign on the web page, it brings up a list of stations that heard and reported his APRS packets directly. I'm sure Rob's not running a KW to a huge antenna, either.

Looking at Rob's list, the longest DX this morning was just a little while ago by a station up north of Two Harbors on the North Shore. There are several statons from WIsconsin listed.

The map shows a big area of tropo propagation over the Great Lakes, all the way from here to western New York right now. I've got QSL cards from eastern Ontario and New York on 2, 222, and 432 for SSB contacts under conditions that were worse than these!

Good time to get on the simplex frequencies and see who you can work! Usually, conditions are better the higher you go in frequency, so UHF should be jumping, too.

2228. Interesting Digital Voice Presentation

Yahoo group: rochester_hams
Date: 2017-01-22 18:58:37 UTC
From: k0rgr@...
Topic: 2228 Message: 2228

This edition of Ham Radio Now features a talk from the latest Digital Comm Conference by the president of Wireless Holdings LLC - the company that makes the DV4Mini and other digital voice products for hams.

In the presentation, Uli describes all of the various different systems out there for operating 'Reflectors' (or Talk Groups for the DMR-inclined).

He goes into some detail on something I've heard on D-STAR, but never realized what it is - unintentional feedback loops in the reflector systems caused by people creating their own way of bridging different kinds of DV reflectors. This is a serious problem now. I've heard it on Reflector 30C on D-STAR, and thought something must be wrong with the reflector, but in fact, most likely two people set up their own gateways between two reflectors and the result is 'digital feedback'. In TCP/IP networking, there is a mechanism to catch such looping and kill it. But in the ham reflector world, there is no way to do that!

He proposes a solution to the problem, and his company is developing a device that will replace the gateway used by a D-STAR repeater. The new gateway he calls 'DV4 Server' would allow several different kinds of repeaters to be tied together locally - including DMR, FUSION, D-STAR, and analog, and it would allow any of the digital modes, using a touchtone pad, to access any DV reflector on any system. So, no matter what digital radio you own, you could work D-STAR, DMR, FUSION, etc., with it.

I was up in the Twin Cities yesterday, and someone had something linked from an analog repeater into the FUSION reflector for MN/WI. It was pretty impressive, though I suspect it was one way, only - Fusion to analog and not vice versa.

The new device does not exist - they have it working on a system in Germany - and it will require buy-in from the managers of all the reflector systems, but it encourages the idea that someday, we'll be able to tie all of our digital systems together without problems The presentation starts about 8 minutes in.

Thanks to the 14 people that attended our 2017 winter field day at fire station #2, and were there for set up, take down, brought equipment, food and operated. We started Saturday at 10:00 AM loading the trailer and moving it to the east road at the fire station.
Everyone that brought their own antennas were setting them up. We used a 4 position antenna switch to one radio to try different antennas on the go. We did not use anything from the June field day, other than what was in the trailer. We had 3 HF and 1 VHF/UHF beam antenna running, plus a vertical to listen to 147.255 repeater. Start time was 1:00 PM local time with a trailer full of people eager to see how we would start out. Will have to see the log to know how we did overall.
We used the Rochester EOC to monitor activities, take food breaks, and just relax. Collin installed Icom radio drivers into the computers for radio control that worked very well. We operated in voice, cw, and digital modes using N1MM logging.
At 6 PM we decided to take down and call it a day. By 6:46 we had the trailer back in the garage73
As an emergency drill we feel we can set up and operate in all bands and modes in minutes not hours. Well done all 73 .
PS: We made a list of items and SOP's to review for the next event. If you took pictures please share them

Ever thought of becoming a ARRL Volunteer Examiner. Would you be an amateur radio operator if someone had not take the time and effort to become a volunteer examiner to give you your opportunity to obtain your license. You can be that person. The process is easy. You must be 18 years of age or older, hold a general, advanced, (limited tester) or extra class license. Never had your station or operator license suspended or revoked.
The VE test is an open book written test (purchase from ARRL) that you complete on your own schedule. Mail it in, get a passing score, Walla you are qualified to join a VE team.We are looking for you to join our VE team. If interested and need more information call me at 507-254-3993, or by e-mail to "w0stv@yahoo.com"

I verified that my badge actually does work, so I can open up the EOC at Firehouse #2 tomorrow, to operate the MN QSO Party. I checked out the radio and the logging computer and all looks well.

The contest runs from 8 a.m. to 6 p.m. local time. I don't know if I will be there at 8, but should be there by 9. I may come and go during the day. Call me on 147.255 if you have questions or need let in tomorrow - if it's just me, I will have to answer the door on my own.

2242. Boy Scouts Radio merit badge - March 17th

Yahoo group: rochester_hams
Date: 2017-03-07 19:19:55 UTC
From: Steve White
Topic: 2242 Message: 2242

Hello to the group,

I'm potentially going to be teaching the Radio Merit Badge on March 17th at Gamehaven Scout Reservation for several boys in my Troop. We are from Winona, which is a bit far for me to log up on my 2m equipment.

I'm still in the planning stages for this effort, but I wanted to reach out to this group to see whether there might be someone willing to spend 10-15 minutes talking on the radio to the scouts as part of this instruction ?

I don't have a firm timeframe in mind at this time, but hope to firm up plans before the end of this coming weekend.

I'd be looking to utilize one of the local repeaters, such as the '82 for this activity.

Any / all advice would be much appreciated.

Hi Steve, yeah I'd defiantly try and help talking to the scouts. I myself am a life scout in troop 99 here in Rochester so it'd be nice for them to talk scout to scout. I'll try my best to catch them!

PS: I recommend using the 147.255 (PL 100) repeater instead of the 82. Mainly because 82 is screwy to be entirely honest!

2245. August 21 Special Event

Yahoo group: rochester_hams
Date: 2017-03-08 19:04:35 UTC
From: Niel - W0VLZ
Topic: 2245 Message: 2245

Is anyone planning their calendar beyond Field Day?

A solar eclipse is happening early afternoon Monday, August 21. Here in Rochester the sun will be 85% obscured. The totaleclipse path is just north of Kansas City. The IH 35 north/south rest areas north of Kansas city are 8 miles north of Kearney, MO and 18 miles south of Cameron, MO. (http://www.modot.org/services/travel/restarea/lathrop/index.htm) They are pretty close to right in the center of the 2 1/2 minute totality path. There is also a state park and historic site near there (https://mostateparks.com/park/watkins-mill-state-park).

I've gone ahead and requested a special event call in case we decide to make a big deal out of it, either from Rochester or from Missouri.

Comments? Interest?

Niel - W0VLZ

Very interested in seeing this but it is a long drive for a 2.5 minute event. I saw one near Talkeetna Alaska in July 1963 and missed there in Minneapolis in the early 50s because mother did mot want us up at 4am ☐. My other favorite event was the occultation of a bright star (I think it was Spica or Aldebran but not sure) seen from near Owatonna many years ago and projecting a transit of Venus. By far the Total of the Sun was the best experience. Nearly 3 minutes near Talkeetna which was qu9te isolated at the tie since we were working on the road from Anchorage to Fairbanks and needed 4 wheel to get there. I have to decide about trips and since my favorite place is Big Bend and Guadalupe Mountaims National Parks are at leat a 1500 mile drive I think I will pick the Black Hills this summer. You can take a reasonably rugged 10 mile 2200 vertical foot elevation gain roundtrip hike to the highest point in SD (Harney Peak at over 7400) or a gentler 6 mie roundtrip with only 1100 feet elevation gain. I think the log one is better because ti would be much less crowded and you will likely see much more wildlife. I am told both trails are pretty easy to follow but I still would have map, compass, and gps tracking app on phone (back country navigator is amazing and no cell connection needed) It would be nice to contact the s[special event though.

Good luck with your plans. I certainly would love to have someone to go to NM and W Texas with as I do not want to fly it again. I used to do that but now taking equipment and such and other flying changes make it not worth the bother.

About FD, I suppose I should get my CW speed back up ☐ Have trouble over 25 WPM now and it seems most of the stations are running 30 WPM ☐

This has been kicking around for some time, and it appears to be an effort to take a questionable lawsuit against one particular Chinese manufacturer and imply that all non-Motorola radios are in the same boat. Hytera has been the #1 competitor for Motorola, and is certainly eating their lunch. But Hytera radios are also too expensive for most amateurs, though they recently started selling a line of 'amateur versions' through Gigaparts - they are priced out of my range, anyway.

The most popular DMR radios for hams are from a different company - Tytera - similar sounding name but different company. There is also an American company, CSI, that markets some affordable DMR radios that are built in China, too, but were designed in the U.S..

There is, in fact, another lawsuit related to DMR from a completely different source. A ham on the east coast was banned from the DMR networks because he was advertising his radio sales business over the network, and has sued, claiming he was unjustly treated, as I recall. The repeater owners in one major network are all part of that suit.

DMR is, in fact, an open standard. Motorola didn't invent it, and it competes with Motorola's P25 products, which are also open standard. Some amateur repeaters are Motorola and some are Hytera. Normally those two can't talk to each other, but external linking sites like Brandmeister make it possible. Brandmeister is a Russian company, by the way.

There are some other developments in the amateur DMR world. The good news is that DMR is growing like a weed. I count 16 DMR repeaters in Minnesota now. The bad news is that those have now been divided into two groups. The 11 Twin Cities DMR repeaters are in the 'Minnesota' group, and the other 5, including Rochester, Faribault, Medina, St. Cloud, and Buck HIll (south metro) - all wide area machines are in the 'MNDMR' group.

Now, the MNDMR group are linked together in the MNDMR talkgroup. The Minnesota group are linked in the 'MN State' talkgroup. (since all the Minnesota group are in the cities, and MNDMR are mostly 'outstate', I think they have those names turned around). But you can't go directly to the Minnesota 'MN State' talkgroup from the MNDMR group, and vice-versa. There were technical reasons for this.

In order to talk to the other group, you need to go to a higher level talkgroup, like 'Midwest', or one of the 'TAC' channels. People linking in via Brandmeister can access both groups, however (requires a gateway like DV4Mini).

Subject: [rochester_hams] Boy Scouts Radio merit badge - March 17th

  Hello to the group,I'm potentially going to be teaching the Radio Merit Badge on March 17th at Gamehaven Scout Reservation for several boys in my Troop. We are from Winona, which is a bit far for me to log up on my 2m equipment.I'm still in the planning stages for this effort, but I wanted to reach out to this group to see whether there might be someone willing to spend 10-15 minutes talking on the radio to the scouts as part of this instruction ?I don't have a firm timeframe in mind at this time, but hope to firm up plans before the end of this coming weekend.I'd be looking to utilize one of the local repeaters, such as the '82 for this activity.Any / all advice would be much appreciated.--

Thanks and 73,
Steve White

2261. Items FOR SALE

Yahoo group: rochester_hams
Date: 2017-04-09 02:41:26 UTC
From: Grant Kesselring
Topic: 2261 Message: 2261

I have some items for sale that I wanted to share with the Rochester club before
posting to a wider audience.

FOR SALE:
- KT34A triband beam --- 10/15/20 meters
- Cushcraft A3WS + 30m kit --- 12/17/30 meters
- (4) Heights tower sections, straight, 8' x 14", hinged base plate
- Icom IC-746PRO with PS-125 power supply
- Icom SM-20 desk mic
- Ameritron AL-80A
- Ameritron ATR-30 tuner
- T2X Tailtwister rotor, Hygain controller, ~200 heavy duty rotor cable
- Ham 4 rotor, Hygain controller
- Astron RS-35M power supply
- Writelog SO2R mulit-keyer
- Misc items: baluns, B&W antenna switch, dummy load, Santec watt meter, TVI low-pass filter, etc.

Pictures of all these items are available upon request. The KT34 and A3WS beams are also pictured on my qrz.com page. The antennas are on the ground and partially disassembled. A storm broke one of the elements and a boom-to-element bracket on the KT34A. Replacement rigid tubing and brackets are readily available. The A3WS is in very good condition and is tuned and ready to be installed. The tower and antennas are pickup only in Rochester 55906. Other items I prefer pickup but can be shipped UPS at buyer's expense. Paypal or cash accepted. Email direct at kesselg75@... if interested in any of these items. Thanks!

73,
Grant K1KD

We have 10 signed up for the DOT clean up, to date Would like to have 15 to make this a quick and easier event. Many hands make lite the work.
Last year was our first time doing clean up. The previous group had abandoned this section of road for two years. We had to do both of our yearly sessions in the spring just to get caught up.
Please consider committing some time if not for the complete clean up session.
We will operate this as a public service event with a net control, to coordinating staging, deployment, transportation, equipment, and general information.
Thanks in advance for your time and commitment to the RARC and its public service events.

From: k0rgr@...
Topic: 2263 Message: 2263

I don't know who scheduled Easter to be on a contest day, but they did.

This Sunday, from 3 p.m. to 6 p.m., I will open up the station at Firehouse #2 for the Rookie Roundup.
Anyone who was licensed in 2015, 16, or 17 is eligible to operate as a 'rookie', and this year, if you have not made an SSB contact yet, you can be a rookie too. The actual contest period starts at 1 p.m., and if we have a rookie who wants to be there at that time, I will try to start then, but I said 3 o'clock at the club meeting, and I might have a family thing earlier that day, being Easter.

Rookie Roundup is a short 'sprint-style' contest, which happens on three different Sundays during the year. This week, it's SSB. The other two weeks are for digital and CW modes.

You do not need to be a General or higher for this contest, even though we will be operating in the General bands, as long as a higher class licensee is present as control operator.

I will be at Firehouse #2, across from Century High School at either 1 or 3 p.m.. Please let me know if you plan to be there. Here is a link to the rules for the contest - http://www.arrl.org/rookie-roundup http://www.arrl.org/rookie-roundup

Thanks, K0RGR

Could use a few more people to make this event a slam dunk with 15 people. We will match your abilities, or in my case disabilities to help with the clean up. We will use simplex communications, bring your HT to play along. The clean up section is Highway 52 by Apache Mall between the Zumbro river and 6th Street SW bridge We stage at 10:00 AM Saturday April 22 in the far SW corner of Apache Mall parking lot near Macys store. You will be grouped up and transported from staging to your clean up area. Bring you ARES vest, If you do not have one, you will receive a free DOT warning vest to keep. They work for ARES events too. Wear good shoes and heavy gloves. Latex gloves will be provided too.
Bragging rights for:Most unusual item found.Most Illegal item found. (N0KZO found some last year, the police were called).Most valuable item found.Who collected the most bags.

Go to the "rarchams.org" web page, click on the activities header, then public service and finally registration for the DOT clean up. If you see any other events you could help with register for them too.
NOTE: We will work from the north and south ends to were ever the middle ends up. The event will be rescheduled if it rains that day. See you there!

2266. 10 meter net tonight 8pm 28.325

Yahoo group: rochester_hams
Date: 2017-04-18 14:23:41 UTC
From: dcnaatz@...
Topic: 2266 Message: 2266

If the WX cooperates (ie, no thunderstorms) I'll put out a few calls tonight on 28.325 mhz SSB at 8pm.
We've had a few "random nets" in the past month or so and based on everyone's busy lifestyles and the fact it's still light outside at the time, summer time usually means less reasons to get on HF. The HF band conditions have been generally lousy as well. BUT all of a sudden during the summer you might hear some CW beacons below 28.3 (great reason to learn slow cw and grid squares or use qrz.com for call signs) and some folk chatting with southern accents .... it's ESKIP TIME! If we have eskip, t can be short or last an entire afternoon, gee I remember once it was a pipeline into VE2 Quebec not down to GA or TX for a change. So keep listening to 10 meters every time you are in the shack and skim the 28.250-28.300 for CW beacons, you can tell in 10 seconds if beacons are coming through.

Subject:Wednesday severe weather threat

Hello Steve

Tonight is the Skywarn training for Fillmore. We will all be in Rushford, which is a long ways from the western side of our county. Would it be possible for a member of the Olmsted group to volunteer to cover the western edge of Fillmore along the hwy 63 corridor if necessary? If storms are marginal, this is not necessary only if something nasty is approaching. As you know, when in Rushford we can't hit SV or Rochester repeaters, so I can be contacted by calling my cell at 507-261-7695 with reports. If Olmsted activates they could just pass reports thru you. Hopefully things won't turn severe. We can communicate more later in the day. Thanks

Congratulations to Dave, KE0MSU, who was the 5th place single op winner for the 0 call district in this event. Dave recently joined us, and he operated from the Rochester EOC with me as control op during the contest.

If you see Dave, I've got a certificate from ARRL for him to download.

2277. Antenna Advice

Yahoo group: rochester_hams
Date: 2017-05-01 01:13:32 UTC
From: Bob Miller
Topic: 2277 Message: 2277

Hello All,

Am setting up my first station and would like some advice or words of wisdom as to what to use for an antenna. Have little knowledge of antennas, have never set one up, not even for a short wave radio.
The transceiver am using is an FT-991A at 100W, with bands160m-6m and 2m/70cm. It needs to be an inside attic antenna with the radio room directly below the attic. Am open for any suggestions, a first attempt is:- For HF and 6m, a rectangular loop antenna, 20' x 12' (64' total). About 25' from the antenna feed point to the radio.- For the VHF/UHF 2m/70cm, an approx 3' vertical 50 ohm mobile antenna in the center of the attic.
Does that seem reasonable for antennas? Other suggestions?
For the transmission line from the antenna to the radio, the VHF/UHF would use 25' of coax.For the HF and 6m, would either get an automatic antenna tuner and place it at the antenna feed point and use coax to the radio, or use ladder line from the antenna feed point to the radio and have the antenna tuner (manual or automated) near the radio.
Suggestions?

A few other questions:- Is there an advantage with a manual tuner compared to an automated tuner?- Any concern for a lighting arrestor or special grounding?
- Other things not mentioned?
Thanks for your thoughts,
Barb, ke0aol and Bob, ad0is

Bob,I built this puppy: http://degood.org/coaxtrap/Amazing results with 100 watts on voice, good DX with seven continents. It cost about $50 and after a few hours in the attic it ran fine without a tuner. Ping me if you want to know more or need help.
For VHF/UHF I use short dual-band vertical like you're describing and a discone.Need help, just ask.-John

Topic: 2277 Message: 2279

HI, Bob and Barb - If you can make the traps, the antenna John suggests should work well for you.

The loop you suggest would be too small to be fed in a normal fashion on the lower bands. The formula for a full wave loop is 1002/f in MHz.. So, your 64 foot loop would resonate at around 15 MHz. Feeding it with coax, you might not get a good match on any band, because a loop will be resonant on the frequency it's cut for and any integer multiple of that frequency.
You could feed it with open wire feeders or an auto antenna tuner at the feedpoint, and then it would probably work on 20 meters and all higher bands - but it would be too small for 40 meters and lower.

You can get very creative with loops and they will still work. By pulling the corners of a loop into the center, you can make a loop much smaller. You can look at the driven elements of a "Pfeiffer Maltese Quad" for ideas -
http://www.qsl.net/xe1cdx/Hamdocs/80/Update%20on%20the%20Pfeiffer%20Quad%20System.pdf
http://www.qsl.net/xe1cdx/Hamdocs/80/Update%20on%20the%20Pfeiffer%20Quad%20System.pdf

I once built a very compressed Pfeiffer-style loop for 40 meters that I thought worked as well as a full sized one in less than half the space.

Now, that's for full wave loops. You can also build a small magnetic loop. These require special feed arrangements and tuners, but very small loops can be built for all bands. They work best when between 1/8 and 1/4 wavelength in size. The biggest problem with mag loops is that you have to retune every time you move in frequency. Remote tuning would be essential for an attic-mounted antenna.

Another suggestion you could try would be a 57 foot piece of wire, fed through a 9:1 balun. This is becoming popular for portable operations, and should at least try to work in your attic. A tuner will likely be required, but the antenna should provide a fairly decent match on most bands without one. I think I've got one you can borrow if you want to try it.

Bob/Barb,

I've found antennas to be a really interesting/fun/rewarding part of ham radio. For a relatively small investment in some wire (plus a manual antenna tuner and an antenna/SWR analyzer) you can learn a lot and have some QSOs in the meantime. Consider also a copy on an ARRL Antenna Book. One thing for certain, with exception of RFI, any antenna is better then no antenna.

If you can route the feed line I'd start with an open 64' loop in your attic fed with ladder line. See http://www.73cnc.com/product_p/ls100.htm for the ladder line. See how that works and then try making it a closed loop. You might also try feeding the wire in your attic with a single wire from your antenna tuner (making it an approx 75' endfed wire) against a 1/4 wave counterpoise run around your shack floor. Keep in mind that the counterpoise will be RF hot at the end. Add traps and play with those as you get the time.

Once you're tired of options at home consider a battery and taking it to the park. Lots of places around Rochester for picnic table hamming.

73,
Niel - W0VLZ

Bob/Barb,

Thinking about it...an indoor counterpoise for a 100 watt rig is asking
for trouble. Stay at QRP levels (5-10W) with this scheme.

If you really want to try an endfed wire at 100w, figure out how to run
a wire outside to a ground rod for your counterpoise.

2282. Re: [rochester_hams] Antenna Advice

Yahoo group: rochester_hams
Date: 2017-05-02 00:53:22 UTC
From: k0uc@gmx.com
Topic: 2277 Message: 2282

Enjoying these responses.
Nice to see what people are using.
5 years in our current house and no HF antennas yet. Need to get that set up.
I use a 4 foot Jetsream JTB3 for 2 meters and 440 MHz. That's on a roof tripod.
I have an end fed with a 9:1 balun that I want to try for HF. It is like the one K0RGR described. Still in the box.
Depends a lot on what bands you expect to work. 80 and 40 are a bit more challenging for small antennas.
Let me throw this question out there to the group... If you had to pick 1 or 2 bands to focus on as a new ham.. What would they be? Depends a lot if you want to run phone or digital I suppose.
At one point I would say 80 and 15. 15 is great if it's open. 80 is crowded at night but fun out to about 600 miles daytime. Phone and digital.
40 can be fun in the day hours and OK at night if interference isn't bad. 20 is a winner for DX but can be crowded. 30 is nice for digital/cw.
The coax trap dipole that John mentioned looks very interesting too. Traps help keep the antenna short and allow multiple bands with little to no tuning. ... At a little expense of efficiency and mainly bandwidth. They can be a very good antenna. Tried and true!
Anyone care to comment on how things have been on the bands? Curious how 80 and 40 have been for stateside. I've never been much into DX. 73BradyK0UC

Bob/Barb,

I've found antennas to be a really interesting/fun/rewarding part of ham

radio. For a relatively small investment in some wire (plus a manual

antenna tuner and an antenna/SWR analyzer) you can learn a lot and have

some QSOs in the meantime. Consider also a copy on an ARRL Antenna Book.

One thing for certain, with exception of RFI, any antenna is better then

no antenna.

If you can route the feed line I'd start with an open 64' loop in your

attic fed with ladder line. See http://www.73cnc.com/product_p/ls100.htm

for the ladder line. See how that works and then try making it a closed

loop. You might also try feeding the wire in your attic with a single

wire from your antenna tuner (making it an approx 75' endfed wire)

against a 1/4 wave counterpoise run around your shack floor. Keep in mind that the counterpoise will be RF hot at the end. Add traps and play with those as you get the time.

Once you're tired of options at home consider a battery and taking it to the park. Lots of places around Rochester for picnic table hamming.

Would like to thank everyone who gave antenna advice, a lot of great ideas and advice! No doubt will soon be 'on the air'. Truly appreciate the responses, and your time and patience to write them.

2284. Looking for volunteers, Med-City Marathon, May 28th

Yahoo group: rochester_hams
Date: 2017-05-04 01:22:08 UTC
From: Eric Van Norman
Topic: 1827 Message: 2284

Hello!

It's that time of the year again and I am continuing to recruit volunteers for the Med-City Marathon on Sunday, May 28th. Thanks in advance to those who have already registered. I have 8 people signed up right now and 20 people (or more) are needed, I'm sending this note to the local newsgroup to get more volunteers. I'll announce it on the net as well as email people who have worked the event in the past that haven't already signed up. If you know of others who might not have gotten this note, please let them know.

To sign up, go to the event page on the RARC website: http://www.rarchams.org/public_service<http://rarchams.org/publicservice/index.htm>. If you can't sign-up on the webpage, feel free to send me your information (if you have HT or mobile radios, the times you are available, a phone number to reach you, and a T-shirt size.).

We need many volunteers and the time span can be as short as an hour to all day (shifts run from around 6 am to around 2 pm). The race itself starts at 7:00 am in Byron (the wheelchairs, if any sign up, will leave 10-15 minutes before that). We usually staff

3x NCS (covers 3 bands)

14x water stop and exchanges (some can work an early stop and then get to a later one)

2x tail vehicle - gator

1x shadow (maybe 2)

Notes:

Med-City WebSite: http://www.medcitymarathon.com (Course Map is under Race Info -> Course Info)

The NCS operators will be near the Mayo Civic Center in the EM-50.

The water stop / exchange operators need to have an HT that can hit the repeater from anywhere on the course and/or a mobile rig capable of the same.

The Gator driver (and passenger since this can get boring) needs to have an HT that can hit the 146.82 from anywhere on the course and/or a mobile rig capable of the same. A 12VDC battery can be made available if needed. The Gator driver must have a valid Minnesota driver's license. Having APRS is a good thing.

Again, you can sign up on the Med-City Marathon link at the RARC link above.

Thanks!

Eric Van Norman

This is in Montgomery, MN, about 45 miles south of Minneapolis:

---------- Forwarded message ----------
From: Jon Platt <w0zq@aol.com>
Date: Thu, May 4, 2017 at 1:21 PM

Saturday May 6, 9:00 AM to 6:00 PM, at the WB0GGM QTH at 17593 334 St., Montgomery, MN. This is about 1 hour SSW of the Twin Cities. We have posted directions for how to get there, along with a list of the many many radio item, on the NLRS website. Go to http://www.nlrs.org/home/wb0gg (http://www.nlrs.org/home/wb0ggm)m (http://www.nlrs.org/home/wb0ggm) and down load the attached PDF. Top end radios include a TS-2000, there is a brand new, never used BX-64 tower, 13 sections of Rohn 25, a turn-key 4x14 ele 2m EME antenna array, many 2m, 222, and 432 high performance weak signal yagis, some 1296 loopers, lots and lots of aluminum including some masting and parts from HF antennas, some feedline, rotators, a 20/40/80/160(?) high power home brew tube amplifier (rack mount), and much much much more. John (SK) was a Yaesu collector as you will see in the list of items. Many of the older Yaesu's are not in working order as far as we could determine, probably need some TLC, but are in beautiful pristine shape.

Please please, no phone calls and no early stopping at John's QTH. Feel free to share this post.

73, Jon

2286. Dayton hamfest

Yahoo group: rochester_hams
Date: 2017-05-06 21:45:54 UTC
From: steve wiebke
Topic: 1189 Message: 2286

This is a package deal:
There are two round trip seats (on a Cardinal 4 seater), included 3 night motel stays and Dayton area ground transportation available for around $330.00. Hamfest tickets and meals are at your expense. Leave Thursday May 18th 11:00am from Rochester air port and land in Dayton around 4:00 pm, (4 hour air time). Leave Dayton Sunday late morning land in Rochester around 5:00 PM. Billing will be sent once all expenses have been figured.
Call W0STV for more details and information 254-3993.

2289. Club HW-9 and Accessories for Sale

Yahoo group: rochester_hams
Date: 2017-05-11 23:23:59 UTC
From: k0rgr@...
Topic: 2289 Message: 2289

Neil, W0VLZ, sent me this note today -
Bill,

Attached is a photo of the HW-9 station I mentioned to you Tuesday evening.Here's a web site with more information: http://wd8rif.com/hw9.htm http://wd8rif.com/hw9.htm This HW-9 does not have the WARC+10 mtr band package installed so it only covers 80, 40, 20 and 15. I tested it and it appears to work on those bands.

These were donated to the club a few years back. I don't know if they show up in any club inventory.

I suggest the club sell this and use the money towards a club project -

HW-9 + PSA-9: $150 (the PSA-9 has the right connector to mate with the HW-9 so the two should be sold as a set.I can throw in a hand key if that would help a sale.)

Speaker SP-99: $30 (this is actually the speaker for the HW-99 so it is a little large but the color and style matches the HW-9

HFT-9A Ant Tuner: $40 (this one has a pretty visible scratch in the top cover)

HM-9 QRP Watt/SWR Meter: $40

I'd be glad to drop the set by your place if you would like to form your own opinion.

73,
Niel - W0VLZ

Subject:Thanks / Suggestions on reporting severe weather

Amateur radio friends - With all the weather this week, a bit THANK YOU for the help with passing along reports and coordinating spotter efforts. I ended up working all the events and had a few comments about radio comms. I've noticed...
- Please don't use county township names as the first way to coordinate locations.
- Intensity of rain (light to moderate, etc.) is not super important to us. Obviously heavy rain w/flooding is.
- On Wednesday we had a couple repeaters where idle chit-chat about gardens and travel was going on during actual warnings. We had to wait several minutes in some instances. In some cases we had to simply leave the repeater.
Again - thanks for all your help. Amateur radio is SUPER important to us and although we can't be on every repeater all the time, we have been trying.

2302. Solar Eclipse QSO Party?

Yahoo group: rochester_hams
Date: 2017-05-27 14:02:58 UTC
From: Niel - W0VLZ
Topic: 2302 Message: 2302

On August 21 there will be a solar eclipse. The path of totality within the US stretches from Oregon through South Carolina but all will see at least a partial eclipse.

The Ham Radio Science Citizen Investigation, HamSCI, is sponsoring a QSO Party on August 21 to gather information about the impact of solar eclipses on propagation. See more information including a video of their Dayton Hamfest presentation at http://www.hamsci.org/seqp .

I have reserved the special event call N0T for our use during this event but I'm not really a contest operator. Instead, I plan to be down near Kansas City observing the total eclipse. Is anyone interested in using N0T here in Rochester and participating in the Solar Eclipse QSO Party?

If you are signed up, be at the park this Saturday between 7 and 7:15am. We are staging in the far right back picnic area shelters.The race starts at 8 and it is hard to dispatch people with runners on the trail at the start. Tell the park entrance that you are a communications safety volunteer for the event to wave the entrance fee.
Talk in and event communications on the 147.255 repeater. Have bug spray and rain gear if needed. We use HT's. For gators and noisy environments ear buds or phones are needed. Have battery life for 6 hours. Wear your communications vest,
Call me at 254-3993 for last minute information or questions. Thanks for your time in helping

Steve-W0STVARES-AECThe more preparation, the less confusion.

I had a nice time at Essex Park today ... sat in the shade, sipped on my Pepsi, and worked MD, ME and NY on 20 meters running about 5 watts.

Essex Park (and any other place with a shaded picnic table) is my summer shack. During the winter I can play with boat anchors in the basement but operating HF QRP during the summer lets me get out to the park and away from neighborhood static/noise.

More information is now posted on youtube at
https://www.youtube.com/watch?v=mDnfICoQsdo&feature=youtu.be . This a a
pretty good video and gives some excellent/basic information about HF
propagation and the tools in place today to help us understand it.

If you want to skip ahead:

0 Introduction
2 Ham Radio and Space Weather
25 RBN foF2
37 The Great American Eclipse
48 Summary / Wrap-up

This is one QSO Party where you don't even have to make a contact, just
being spotted by the Reverse Beacon Network from wherever you are is
good enough. But the more RBN hits from all over the world the better
will be the data base and potential conclusions.

Subject:Dodge Cty repeater up and operating

Hi all,

Just a quick note. The Dodge Cty simplex repeater is up and operating on 146.580 MHz. The repeater will re-transmit your last message. When you wish to respond, wait for the beep to begin your transmission. You may or may not hear the original transmission from another member.

There will be a major antenna improvement by the time we have our next meeting via HT's. The antenna height will increase by 10-15 ft and low loss coax will be installed. The repeater is currently a J-pole antenna and a Yaesu FT-2600M running at 25 watts. If the reception is border line at your location, it most likely will improve in the next week to 10 days.

This is more for Marvin, and others with important information. The repeater has a message center. Meeting announcements can be recorded and played back at any time.

To record a message do the following:

1. Key your HT and tap in using the keypad ##31 Un key the HT.

2. Wait for the repeater to respond with three beeps. This is confirmation that the message command has been received.

3. Key the HT again and speak the message you want recorded. Un key the HT.

That's it! To hear the message key your HT and tap in ##21. The repeater will playback the recorded message.

I encourage everyone to give it a try. Play with the repeater at different locations and rigs. Record a quick message to test it out. You can hear the current message with the ##21 command.

The recorder will erase the previous message once a new one is received. You can erase your message at any time by doing the following:

1. Key your HT. Tap in ##41 Un key the HT. The repeater will respond that the command has ben received with 3 beeps and the message will be erased.

I have done some preliminary tests and with a Hustler mag mount antenna on my truck's roof and a 5 watt HT I can currently hit the repeater on the far east side of Byron. I expect the range to improve once the antenna and coax improvements have been made. I did not have a problem using this gear in Kasson or Mantorville.

Check it out!

73,

Craig Siegenthaler

From: k0rgr@...
Topic: 2319 Message: 2319

Things are looking good so far for the CW tent.

I'm going to set up the computer so that you can use FLDIGI to copy CW, if you wish. This should make it possible for people with little or no CW experience to do 'hunt and pounce' operation. Come on over, and we'll let you give it a try. On 80, 40, and 15 meters, Techs have CW privileges above the bottom 25 kHz of the band, so you don't need an higher class person to watch you when you're in your own bands.

Hopefully, someone will volunteer to take over for an hour or so around 8 p.m.. I have agreed to run the Minnesot Digital ARES Net that night, so that Field Day stations (that includes us) can send messages to the SEC for bonus points. I plan to do that from home.

Gilbert, I hope I can answer your question sir. As a Dodge County HAM, with using Craig's simplex repeater, we in Dodge can now use our HTs to communicate outside of the county, not just using our mobile, and desktop radios, especially in an disaster, emergency, or for fun.
We are limited since we have no real repeaters, and in a disaster, or emergency we may only have access access to Craig's simplex repeater, which can be run on batteries, or electrical power.
So he can move it anywhere in the county, and plug any radio, HTs, mobiles into it.
Also if cellphone towers are taken out in a disaster, or they lose power, cellphones are useless.

As the Dodge County A.R.E.S. Coordinator, I have another resource to call upon in a disaster, or emergency.
73s,

Marvin,

KC0CLC

http://www.postbulletin.com/content/tncms/live/#1

Spouses Elise and Daniel Musall search for signals in the GOTA trailer during the Amateur Radio Club field day Sunday.

Ken Klotzbach / kklotzbach@postbulletin.com

Hour after hour, ham radio operator Bill Osler worked his radio Sunday, sending and receiving, over and over again, the insistent dots and dashes that make up Morse Code.

To the untutored, the beep beep beep-beep beep beep-beep that seemed to go on endlessly would have been, well, mind-crushingly repetitive. But to Osler, a retired IBMer, it was seventh heaven. He was having a ball. Clearly in his element, Osler was making contact with other operators in Ontario, New Mexico, Quebec and South Carolina within minutes.

"I'm a popular guy at this moment," Osler said near the end of a 15-hour stint. "I will dream Morse Code for the next week."

Rochester ham radio operators gathered during the weekend at Gamehaven Scout Reservation for their annual "Field Day," a 24-hour marathon contest sponsored by the Amateur Radio Relay League. More than 40,000 amateur radio operators across the country participated in last year's event. Think of it as the all-star game of ham radio operators.

Living in the midst of a communication revolution where people can talk, text and FaceTime anyone in the world, ham radio might seem a quaint avocation. But all those forms of communication are built on an infrastructure of cellphone towers and internet trunk lines, said Peter Wollan, a Rochester amateur radio operator for the past 27 years.

What happens when those go down? You might be surprised at the degree to which amateur radio types are woven into the fabric of the area's emergency response systems. They fill the breach when hurricanes, floods and tornadoes suddenly render cellphones useless.

Often, amateur radio operators are the inconspicuous communicators who provide a vital link to emergency services. Locally, operators are used at the Med City Marathon and RochesterFest parade. They are storm watchers for the area, an extra pair of eyes and ears for the National Weather Service.

Plans are to use four or five ham operators at the Down by the Riverside Sunday concert series this summer to help in the event of medical and other emergencies.

"A lot of people think we're part of the event staff, and we kind of are, but we're not," said Daniel Musall, a radio operator and general manager of Colonial Lanes bowling alley.

The Rochester club has about 60 active members. There are about 300 licensed operators in the Rochester area, members say.

Ham radio operators often are stereotyped as a bunch of cranks who tend to be overly infatuated with their radio equipment, and Wollan doesn't deny there is an element of truth to the stereotype.

"The vast majority of the people who are perceptually associated with ham radio are 50-plus," he said. Yet, members also say there was an influx of newly licensed members when knowing Morse Code no longer was required to get a license.

Musall said when he first got his license, his wife, Elise, made clear she wanted nothing to do with the activity. But somewhere along the way, she got hooked on amateur radio, too.

"I dragged her out to Field Day one year, and next thing I know she's getting her license," Musall said. "She can talk to somebody in Connecticut, and it's not on her cellphone. It's not reliant on current technology."

Wollan, a retired statistician, said there also is a high degree of skill in being an amateur radio operator. A premium is placed on the ability to hear almost inaudible code or communications and to process those communications swiftly. It also requires a lot of technical know-how. More than once, radio operators described the moment of making contact with another operator in a different state or country as similar to fishing.

"The actual communication is a lot like fishing," Wollan said. "There's the reward of catching something."

"It's challenging," said Osler. "There are so many facets to this hobby. I've been doing it well over 50 years, and I always find new things."

From: k0rgr@...
Topic: 25 Message: 2327

I've been promising a General Class and I know there are several of you out there that want to do one. I was planning on doing it in September, starting Saturday the 9th, and ending on the 23rd. As usual, it would be three Saturdays in a row. However, it appears this might now work for some of you.

Starting the 30th, I will do a Tech class for three weekends. I'm also going to school myself from Oct 2 through November 20th, three days a week. I think we could still do it in that timeframe or after.

Please let me know if you want to attend, and if the September dates work for you, and if not, when would be better.

Thanks
K0RGR

I have a Heathkit SB-200 Linear Amplifier for sale. The kit was assembled by my father in the mid 70's and he used it until the mid 90's. It has not been used since. The amplifier covers, 80, 40, 20, 15 and 10 meter bands at 1200 watts PEP SSB, or 1000 watts CW. . I have no reason to believe it is not functional. Includes the original manual, antenna switch, and the cables pictured. I am asking $350. Please let me know if you are interested. hansonbradley@...

Hi
I was contacted by Ray Novak of Icom America who asked to stop by and visit our club this coming weekend and do breakfast. He will have Icom radios along to demo and show including the 7300 and 7100. I don't know yet if he will bring along a 7610.
The breakfast will be at Barlow Hyvee Plaza in Rochester on Civic Center Drive just east of the US-52 and Civic Center Drive interchange.
We have a private room reserved inside the HyVee Grill Café under my name from 8 AM until 10 AM. I doubt they will object if we stay longer.
Ray is being very generous to have the radios along for us to touch and test. This is a great time to come and hear from the National Sales Manager of Icom America who has the ear of the Engineering group in Japan. Do you have a 7100 or 7300 with questions about its operation or performance? Are you looking for a portable rig to upgrade to for travel? Want to feel and hold these radios for yourselves? What a great time to see Ray and also ask any questions you might have about Ham Nation also.
Please let me know if you are planning to come so I make sure we have enough seating capacity.
Please feel to pass along the invitation to the RARC and Winona club membership as well.
Thanks again!

Sent from Yahoo Mail on Android

On Fri, Jul 21, 2017 at 1:21 PM, bc expeditionradio@... [hflink]<hflink@yahoogroups.com> wrote: Brian Lloyd WB6RQN / Aeronautical Mobile continues the Project Amelia Earhart 80th Anniversary Flight round-the-world this week. He will be active 21-30 July on ham radio HF frequencies while in flight over the Pacific Ocean, stopping at several islands. As a tribute to the Earhart flight, Brian will drop flower leis as he overflies Howland Island. He is the first solo aviator to re-trace the original Earhart-Noonan equatorial flight of 1937. The route has taken him through the Caribbean, South America, Africa, Middle East, South Asia, Southeast Asia, Australia, and Oceania. The circumnavigation flight destination is Texas, USA.

Yesterday, Brian Lloyd said "I have even higher respect for Amelia Earhart now that I have flown 20,000 miles in her shoes. I am talking about flying the plane and dealing with the issues that come up as part of the flight. She was sole pilot in her plane as I am with mine. Speeds are comparable and I have had to deal with the same weather she did."

Brian comments further, "My engine quit out over the Pacific, North of Great Barrier Island, New Zealand. I thought I was going swimming but then it looked like I might have to do a forced landing at Great Barrier. I got it running again well enough to make it back to the airport at Hamilton, New Zealand."

The problem turned out to be a contaminated fuel and a clogged fuel filter, which led to vapor-lock. Brian Lloyd's airplane, Spirit, has since undergone considerable maintenance while in New Zealand. During that time, repairs were made to his engine, fuel system, and HF radio. Spirit is a single-engine Mooney M20K 231 propeller-driven aircraft, modified for extended range and equipped with modern avionics gear.

The HF radio system includes a Micom 3 transceiver, autotuner, and a belly wire antenna. While airborne, Brian's strong HF radio signal and sensitive receiver have enabled him to talk with ham radio operators all over the world. He utilizes the built-in ALE (Automatic Link Establishment) of the Micom 3 radio to initiate and respond to ham radio voice SSB calls.

How to contact
Ham radio contacts with WB6RQN / Aeronautical Mobile are invited on the following frequencies (kHz)

- 14346.0 USB Voice and ALE,
- 18117.5 USB Voice and ALE,
- 21432.5 USB Voice and ALE,
- 7296.0 USB Voice and ALE,
- 7185.5 USB Voice and ALE,
- 5731.5 USB Voice and ALE.

For direct ALE contact, dial up an "Individual Call" to WB6RQN. Brian usually responds immediately by SSB voice, unless he is busy with flight piloting priorities. Operators in North America may have more favorable HF propagation to the Pacific area of the flight during in the afternoon and night hours. Those without ALE capability may want to try tail-ending an SSB voice QSO, or coordinate a call with one of the ALE operators in the HFLINK.NET chat room.

Schedule
Estimated Flight Schedule : Date : Days : Airport_ID
Hamilton, New Zealand 21-July
Pago Pago, American Samoa : 22-July : 1 : NSTU

Dakota Division amateurs;

It's time to rally congress again and get our senators to support the Amateur Radio Parity Act. Specifically Senate Bill S 1534 was introduced recently and needs each and every one of you to urge your respective senator for their support. Follow this link (https://arrl.rallycongress.net/ctas/urge-us-senate-to-support-amateur-radio-parity-act) and in a few easy steps, a letter will be sent off . You can modify the letter if you so choose as well. For example, my wife who is not a ham modified the letter which indicated her support since my two sons and I are hams. Send it off to friends and family to do the same, as we need all the support we can get to urge the senate to pass this bill. Just have them edit the letter and send it off. This will only take you less than five (yes, 5!!!) minutes to due, so please help us get this bill moving forward. There is more information on the ARRL web site if you need additional information.

Thanks for your support of the ARRL, Senate bill S 1534, and amateur radio as a whole!

73!

Well, this has slipped my mind too many times, but here it is - I plan to teach a General Class for Technicians starting Sept. 9. The class meets for three consecutive Saturdays from 10 a.m. to approx. 5 p.m.. There is a $25 charge for the class.

Please use the signup on this page to let me know you intend to attend.

Thanks,
K0RGR

2341. Power line noise help

Yahoo group: rochester_hams

From: somheil@...
Topic: 2341 Message: 2341

I’m helping the local Civil Air Patrol get their HF capabilities up and running. Their QTH is a few feet from some power lines with transformers which I’m worried are emitting RFI. I’d like to explore this but don’t know how, anyone have experience with this?
Thanks

-John, nzos

2342. Can someone trade/cover NCS for the Olmsted county ARES net tomorrow?

We had a few things left over from last night's Bill Morman's estate sale including:

EF Johnson SWR meter - $5 (https://www.prismnet.com/~nielw/2017RARCPicnic/photos/EFJSwrMtr.html)
KW Low Pass Filter - $5
Lafayette Field Strength/SWR Meter - $5
Ten 1625 Tubes - $10 (https://www.prismnet.com/~nielw/2017RARCPicnic/photos/1625x12.html)
ARRL Antenna Book - $3 (https://www.prismnet.com/~nielw/2017RARCPicnic/photos/ARRLBooks.html)
1984 ARRL Handbook - $1 (https://www.prismnet.com/~nielw/2017RARCPicnic/photos/ARRLHandbook.html)

Does anyone wish to make offers on any of these things?

Members of the Winona Amateur Radio Club have a formidable challenge coming: while bicycle riders in the Winona Rotary's Ride-The-Ridges try to climb hills, WARC members will try to drive radio signals from the deep valleys. It's a major project and you can learn about it in the August issue of "The Hamgram" and also at the club meeting 7 p.m., Thurs. Aug. 17.
Another club challenge is having gear for all to use like the Remote HF station at Witoka. We doff the old chapeau to the members that generously contributed so the station would be available.
73, Bob

I even got to test out my 25w Radio Shack xcvr from last week's picnic. If you are around today give it a listen but CALL CQ a few times too.

1. Copied about 5 CW beacons from VA, PA, GA & TX.
2. Called CQ on 28.400 and worked into Cleveland 59+20. Switched from my IC746 to the RS xcvr I just bought at the picnic and no change in sig.

I am volunteering and busy till supper time so will get on the air again after 630. I'll probably be on 28.400 or 28.325, our old 10m net frequency (yes, I know that's kinda fallen off but perhaps we'll fire it up in the darker cooler months if there is interest). FYI, I also plan to operate Monday during the Eclipse QSO Party from 9-5 local time, will monitor 147.255 on the side. 73 Dave K0VH

Dave,

My 5 watts on the RBN is reporting 17dB over the noise into PA.

See http://www.reversebeacon.net/dxsd1/dxsd1.php?f=567 Does that rig of yours have CW also? Might be interesting to see what the RBN says for your signal/antenna/location.

We didn't have any exact S-meter readings but the rubber duckie, as expected, was a distant third. What did surprise me was that the twin lead j-pole performed better than the 5/8 wave vertical. I would have thought two full size antennas would be equal. Possibly angle of radiation played a role or the cookie sheet was a handicap. It would be interesting if we could do more exact measurements sometime.

2365. Tower help?

Yahoo group: rochester_hams
Date: 2017-08-24 18:47:27 UTC
From: Grant Kesselring
Topic: 2365 Message: 2365

I'm in need of a small crew of folks to help with my tower project. The tower is 50' laying in my back yard, put together, with guy wires and everything attached and ready to go up. The base of the tower is hinged. The plan would be to have 4-6 helpers walking up the tower, while 1-2 people assist by pulling on a guy rope from the opposite side of the tower.

This is kinda last minute, but I was thinking of doing this tower raising party tomorrow evening, Aug 25th at 6pm.
I expect it to take no more than 30mins.
Please let me know if you are available.
I'll send out a confirmation email by noon tomorrow either way. If there aren't enough people who can come, I'll reschedule for another time.
THANKS!

73,
Grant K1KD

Subject: [rochester_hams] Tower help?

I'm in need of a small crew of folks to help with my tower project. The tower is 50' laying in my back yard, put together, with guy wires and everything attached and ready to go up. The base of the tower is hinged. The plan would be to have 4-6 helpers walking up the tower, while 1-2 people assist by pulling on a guy rope from the opposite side of the tower.

This is kinda last minute, but I was thinking of doing this tower raising party tomorrow evening, Aug 25th at 6pm.
I expect it to take no more than 30mins.
Please let me know if you are available.
I'll send out a confirmation email by noon tomorrow either way. If there aren't enough people who can come, I'll reschedule for another time.
THANKS!

73,
Grant K1KD

I can be there. I forget how to get to your house, though.

Peter

Thanks to those that responded to my request for tower help. I don't think with the number of positive confirms I got that we would have a large enough crew.
So let's reschedule for next week.
How about next Friday, Sept 1st at 6pm (whoa, is it already the end of the summer?)
Please respond directly to kesselg75@... if you can make it.

Thanks!

I am forwarding this from the Winona radio club for input on their issue on aprs. I do not know who is running the I-gate in this area. Go direct with Mike if you can help.

Subject:APRS

Hi Steve,

Nice talking to you on the Winona net tonight. I was coming back from the north on US 61 and it sounded like a dropped out of the repeater around Kellogg.

What we think we see is some igates delaying packets on the way to the Internet. Those that bother us seem to be a ways out from us. Attached is a log from Friday. KC9ZEZ-7 was driving around in downtown Winona. Raw data is attached. If you look up the track on the map, you will see it jumping around.

Anything you can help us figure out will be greatly appreciated. We are going to be displaying aprs.fi on a projection TV at ride headquarters for the Winona Rotary Club's Ride the Ridges bike tour on Sept 16. We are adding some digipeaters and igates in an attempt to get a full track of the sags, and we are hoping to not have it jumping around.

Thanks and 73,

Erik

If you are still looking for help, Barb (ke0aol) and myself (Bob, ad0is) are available for Friday evening.

Bob Miller

From: Grant Kesselring kesselg75@... [rochester_hams] <rochester_hams@yahoogroups.com>To: "rochester_hams@yahoogroups.com" <rochester_hams@yahoogroups.com>Sent: Friday, August 25, 2017, 12:41:31 PM CDTSubject: [rochester_hams] Re: Tower help?

Thanks to those that responded to my request for tower help. I don't think with the number of positive confirms I got that we would have a large enough crew.
So let's reschedule for next week.
How about next Friday, Sept 1st at 6pm (whoa, is it already the end of the summer?)
Please respond directly to kesselg75@... if you can make it.

Thanks!

I'm in need of a small crew of folks to help with my tower project. The tower is 50' laying in my back yard, put together, with guy wires and everything attached and ready to go up. The base of the tower is hinged. The plan would be to have 4-6 helpers walking up the tower, while 1-2 people assist by pulling on a guy rope from the opposite side of the tower.

This is kinda last minute, but I was thinking of doing this tower raising party tomorrow evening, Aug 25th at 6pm.
I expect it to take no more than 30mins.
Please let me know if you are available.
I'll send out a confirmation email by noon tomorrow either way. If there aren't enough people who can come, I'll reschedule for another time.
THANKS!

I got a number of folks who said they were free to help so the tower raising party is ON for tomorrow, Friday 9/1 at 6pm at my place. As I said, we need a small crew to help walk up the tower to its vertical position. Everything else is already in place so I expect this to take no more than about half an hour. Please respond to me directly at kesselg75@... if you are interested in helping out and haven't responded yet. We could always use a few more helping hands and/or watching eyeballs!

Place: 6014 Woodridge Ct NE
Date: 9/1/17 (Friday)
Time: 6PM

Refreshments and pizza will be served afterwards, so stick around to chat and have some food!

I will be taking new applications for anyone interested in renewing or joining the Olmsted ARES program. The applications will be for a 3 year membership. Pictures will be taken along with the applications when possible, (take them when I see you). The pictures will be kept on flash drive to give to a served government agency for their disaster ID program when needed. I will have the forms for you to fill out at the RARC meetings and other amateur radio events. You may also fill out an ARES pdf form on the club web site, and submit it to me at W0STV@... or print it, fill it out and mail it to Steve Wiebke 4001 2nd Place NW Rochester MN. 55901.
I have selected the following to be the AEC's for Olmsted ARES: John Scott (N0HZN), John Dalin (KA0MYG), Kelly Boles (KE0EMJ) and Collin Howe (AA0CN). Thank you for accepting these positions. I look forward to your ideas, and working with you.

Any amateur radio operator can call or text me at 254-3993, or e-mail me about ARES. I look forward as your EC serving our ARES program..

I've been asked to pre-arrange amateur radio communications between Mayo Rochester and Mayo Jacksonville, prior to Hurricane Irma's arrival. I'm trying to set up some skeds to test our capability.
I intend to operate from the city EOC for this, but I'd like to have a more capable home station or two standing by. My guess is that we'll need good capability on 40 and 20 meters. If you would be willing to be our backup, please let me know, along with contact info.

Thanks,
K0RGR

Hi Steve,

Any more thoughts on this issue? I'm suddenly desperate to get it fixed, as we are down to about a week before the event it's still a problem.

We tried reducing our typical paths from WIDE1-1,WIDE2-2, to WIDE1-1,WIDE2-1, hoping the packets wouldn't make it to the stations that seem to be delaying the packets, but they still are.

A good example is SAG-1 from this morning. There are several packets that were delayed.

Any help would be greatly appreciated.

Thanks,

ERik

Hi Steve,

Nice talking to you on the Winona net tonight. I was coming back from the north on US 61 and it sounded like a dropped out of the repeater around Kellogg.

What we think we see is some igates delaying packets on the way to the Internet. Those that bother us seem to be a ways out from us. Attached is a log from Friday. KC9ZEZ-7 was driving around in downtown Winona. Raw data is attached. If you look up the track on the map, you will see it jumping around.

Anything you can help us figure out will be greatly appreciated. We are going to be displaying aprs.fi on a projection TV at ride headquarters for the Winona Rotary Club's Ride the Ridges bike tour on Sept 16. We are adding some digipeaters and igates in an attempt to get a full track of the sags, and we are hoping to not have it jumping around.

Thanks and 73,

Erik

SB QST @ ARL $ARLB017
ARLB017 Operating Procedures During Hurricane Irma

ZCZC AG17
QST de W1AW
ARRL Bulletin 17 ARLB017
From ARRL Headquarters
Newington CT September 8, 2017
To all radio amateurs

SB QST ARL ARLB017
ARLB017 Operating Procedures During Hurricane Irma

Please be aware that due to the breadth of this series of weather events, numerous emergency and public service nets are in session, especially on the 80, 40, and 20 meter bands. US licensees are reminded that Part 97.101 (c) always gives priority to stations providing emergency communications. All stations should be aware that in a large-scale natural disaster, immediate threats to life and property can happen quickly. In order for Amateur Radio to play an effective role in supporting humanitarian efforts, it is key that all licensees cooperate to minimize potential on-air problems.

Amateurs should also be aware that the primary users on the 60-meter channels are using those channels extensively. Amateur stations, as secondary users, must ensure that their communications are conducted in such a manner to ensure that Federal government stations, as primary users, can have immediate use of any 60-meter channel. Amateurs, please make sure you are leaving adequate breaks between transmissions to allow the primary stations to use the frequency. If a primary user does break into an amateur contact on the frequency, the amateurs involved should immediately cease their transmissions.

At this time, it is ARRL's understanding that only Amateur Radio Emergency or Amateur Radio Priority traffic is moving in and out of the affected areas. Amateur Radio Health and Welfare communications are being queued up for later delivery into the affected area, as the emergency and priority traffic eases.

In the aftermath of a natural disaster, it is human nature for persons outside of the affected area to seek information on their loved ones. Those wishing to send Health and Welfare queries are encouraged to use the American Red Cross's ''Safe and Well'' website to facilitate those contacts:

All -

If you are interested in becoming a certified pilot for the RARC Drone, we are asking you invest a small amount of money ($15 to $30 max) in a micro drone to practice flying at home. You will need to prove you can control it before testing on the main drone. You want one that is 4 channels and uses Mode 2 controls, the standard in the US.

Here are a couple recommended choices. You do not have to go with one of these, but something similar with the same set of controls (not touch screen driven).

2398. Free General Radio 1608A impedance bridge

Yahoo group: rochester_hams
Date: 2017-09-20 21:22:35 UTC
From: w0vlz@...
Topic: 2398 Message: 2398

I've a General Radio 1608A impedance bridge available for free. See http://conradhoffman.com/GR1608A.htm http://conradhoffman.com/GR1608A.htm and http://www.ietlabs.com/pdf/Manuals/GR/1608-A%20Impedance%20Bridge.pdf http://www.ietlabs.com/pdf/Manuals/GR/1608-A%20Impedance%20Bridge.pdf

It measures component capacitance, inductance, resistance and conductance. Mostly works but not perfect.

"Internally, the 1608-A is built like a battleship. It achieves accuracy via precision mechanics. Today's economics (and modern digital methods) insure that such a monument to the mechanical engineering arts will never be seen again."

Cool instrument but I'm not using it and it takes up a lot of space: 19" wide, 12" tall and 9" deep.

Date: 2017-09-26 17:22:29 UTC
From: k0rgr@...
Topic: 2400 Message: 2400

I need to get back to Community Ed with a plan for our Spring classes. They have proposed a date of Apr 14 to start. I am hoping to have a seasonal job at that time, which will probably require me to be working on the 14th. I'm thinking about shifting the class one or two weeks forward.

If I leave it the way it is, is there one or more person who'd be willing to cover the first week or two of class for me, if I'm unable? Does anyone care if I move the class date forward? We will have to ask the VEC team to move their test date accordingly if we move it.

Thanks
K0RGR

RUMORED NEW PRODUCTSIn recent weeks, Factual Amateur Radio Technology Services have learned of a product roadmap for both amplifiers and a new HF transceiver. We’re still gathering details, but what we’ve learned so far includes:
- Three New HF Amplifiers, modeled after Tokyo High Power Labs models.
- Three New HF Transceivers, with features to delight even the most critical of operators
- A new remote base protocol
Details are still a little sketchy, but the rumored HF Transceivers are reportedly being labeled:
- BaoFeng Hurricane (SDR with knobs, 250 watt all band transceiver)
- BaoFeng Tornado (SDR with knobs, 400 watt all band transceiver)
- BaoFeng Tsunami (SDR no front panel, 100 watt all band transceiver)
 KILLER PRICINGThe rumored pricing suggests BaoFeng intends to dominate the HF Transceiver market in a similar fashion that they have supplanted the VHF and UHF handheld world. We could not verify at this moment, but the suggested retail price for the Tsunami is $180.00 US!

2411. Spring Class

Yahoo group: rochester_hams
Date: 2017-10-03 14:55:01 UTC
From: k0rgr@...
Topic: 2411 Message: 2411

I decided to go ahead and confirm the dates that Community Ed picked for the Spring class - starting on April 14, and running three Saturdays through April 28th.

I'm working on getting a part time job doing income taxes, so April 14 is probably not a good day for me to be unavailable for work - so I will probably need to have someone fill in for at least part of that class day for me. Peter, W0LLN has offered to help on the 14th. If you've ever had a desire to be an instructor, here is your opportunity!

2416. RARC Tue Oct 10 CHANGE IN PROGRAM to Winlink

Yahoo group: rochester_hams
Date: 2017-10-07 16:35:48 UTC
From: dcnaatz@...
Topic: 2416 Message: 2416

From KE0EMJ:

The originally scheduled October program " How to Buy Used Ham Equipment" will unfortunately need to be postponed. In its place, K0RGR (Bill Osler) will be offering insight into "WinLink; also known as "RMS Express;"-- an application that provides an amateur radio operator with the ability to send email using the ham bands. Winlink is a digital radio communications system that allows amateur radio operators to send and receive electronic mail (e-mail) and attachments without having a direct connection to the Internet. Winlink is a store and forward messaging system. WinLink was utilized recently in Puerto Rico by amateur radio operators to offset the "grid-down" disaster scenario.

[Posted via K0VH who is interested in Winlink after seeing how much it's being used from the ARRL led emm comm out of Puerto Rico the past two weeks. I highly recommend all to read of that activity on http://www.arrl.org/puerto-rico-caribbean-recovery-2017 http://www.arrl.org/puerto-rico-caribbean-recovery-2017 and the portions of Ham Nation video Oct 4 https://twit.tv/shows/twit-bits/episodes/4453 https://twit.tv/shows/twit-bits/episodes/4453] 73 Dave Naatz KØVH

Advice to my students - don't ever put up an antenna that you can't reach yourself. Otherwise, every time something goes wrong, you have to beg for help.

My wife discovered why the SWR on my dipole was so bad on 40 meters last night - the dipole is laying flat on the roof. It looks like the heavy duty fiberglass pole that was supporting it broke. Drat!

So, I need volunteers to help fix it. I think the weather forecast is for rain this weekend, and I'm teaching class on Saturday. Maybe the following weekend? That would also give me time to get some new coax to replace the stuff that's been up there for years. Pizza and beer?

Thanks,
K0RGR

My wife discovered why the SWR on my dipole was so bad on 40 meters last night - the dipole is laying flat on the roof. It looks like the heavy duty fiberglass pole that was supporting it broke. Drat!

So, I need volunteers to help fix it. I think the weather forecast is for rain this weekend, and I'm teaching class on Saturday. Maybe the following weekend? That would also give me time to get some new coax to replace the stuff that's been up there for years. Pizza and beer?

Subject: Winona Amateur Radio Club October newsletter

"When All Else Fails Amateur Radio Works" is in the headlines. Hurricanes in Texas, the Caribbean and Mexico as well as raging fires in California have Hams helping out in essential ways. "Harold Ham" examines what is required in disaster work and how some Hams are paving the road to Hell with their good intentions. The October Winona Amateur Radio Club's "The Hamgram" checks-in with "Harold," glances at a hot, new digital mode and more!

If you're interested, I can be available any of the days, and on the 14th if Peter would like another person there.

Bob, ad0is

On Tuesday, October 3, 2017, 9:55:37 AM CDT, k0rgr@... [rochester_hams] <rochester_hams@yahoogroups.com> wrote:

I decided to go ahead and confirm the dates that Community Ed picked for the Spring class - starting on April 14, and running three Saturdays through April 28th.

I'm working on getting a part time job doing income taxes, so April 14 is probably not a good day for me to be unavailable for work - so I will probably need to have someone fill in for at least part of that class day for me. Peter, W0LLN has offered to help on the 14th. If you've ever had a desire to be an instructor, here is your opportunity!

I'll be posting this to the club web site, but thought I'd put it up here first.

Bob Levin, AA4EU, bought a nice station that he hoped to use in his retirement home in the Homestead here in Rochester. Unfortunately, something in the complex outside of his apartment is generating S9+ radio noise, and the entire building is equipped with Arc Fault Circuit Interrupters (AFCI) which are very RF sensitive, so even at the 5 watt level, any HF RF pops these breakers in Bob's apartment, and likely those above and below his. Bob is now using RemoteHams successfully to operate a club's rig remotely via the Internet, so he has decided to sell his new station which was purchased new in July.

Here is what Bob has -
ICOM 718 HF transceiver - $495
MFJ SuperQ Loop antenna - $350
Astron RS-20 power supply - $75
MFJ931 Artificial Ground - $75

Bob says if someone is interested in buying the whole station, he will negotiate prices. You can reach Bob at his email address - rvlev42@charter.net

I think Bob's prices are already pretty good - the gear is really almost unused. The loop antenna works very well, and Bob has it mounted on a special cart a friend built for him so he could roll it in and out of his apartment easily.

Mr. DeGrandis seems to be in Rochester New York. He probably missed the "Minnesota" parts of the FB group.
That wouldn't stop any of us from helping (since we have radios and all), but I'm guessing he's looking for someone more local to him.

We finally did it!
There are two groups of people that I have to thank. One is to the people that signed up for the many previous scheduled clean up times that were canceled due to weather conditions. The other is the group that help with the Highway clean up last Saturday morning.
Thanks you all for your time and efforts to complete this event for 2017.

2455. New Rochester area 10 meter net tonight 7pm

Yahoo group: rochester_hams
Date: 2017-11-28 16:59:27 UTC
From: dcnaatz@...
Topic: 2455 Message: 2455

As we discussed at the RARC meeting two weeks ago, we are going to try for a new Rochester area 10 meter net tonight and next Tuesday Dec 5.

What's "new" is the time: 7pm CT an hour earlier than we ran this net for many years prior. We'll stay on 28.325 mhz upper side band.

Depending on checkins and interest we'll vote for a technical topic of interest. There are two 10 meter contests the next two weekends we could discuss. Besides the big ARRL contest Dec 9-10, I spotted one for this coming Sunday and may try to work a few stations
https://www.rttycontesting.com/ten-meter-rtty-contest/rules/
https://www.rttycontesting.com/ten-meter-rtty-contest/rules/

So next two Tuesdays 7pm 28.325. RARC Christmas party is the next Tues (sign up on the rarchams.org page if you haven't already!) no net then and probably not over the holiday weeks either. Depending on our turnout we'll see if there is interest to keep this going in January. Even if you can't make it or just are able to copy us (no transmit) I'd appreciate emails & signal reports to k0vh@arrl.net. 73 Dave KØVH

2456. Re: Simplex frequency changes

Yahoo group: rochester_hams
Date: 2017-11-28 17:08:52 UTC
From: stratigus64@...
Topic: 2454 Message: 2456

With the Olmsted County ARES simplex frequency changeover, I would like to propose that our club/Olmsted County ARES org put together a Template for VHF/UHF radio frequencies as a list, reference, and jumping-off point for newcomers.
The list would be easily portable to any VHF/UHF handheld, mobile, or base station that CHIRP can communicate with, but initially geared toward the ubiquitous Baofengs (as they are probably the most common and most accessible radio supporting the minimum base set of functionality we'd need to define).

I propose this template would initially contain:
- National (US) standard Calling, Simplex, APRS/Data, frequencies for VHF/UHF HAM use
- All commonly-used Local repeaters (All Rochester, surrounding counties, and some wider area repeaters)
- The new ARES simplex frequencies for Minnesota/Olmsted County (VHF/UHF)
- FRS/GMRS/MURS and select Marine VHF channels (not legal for TX, but fully interoperable if need be)
- Select National Emergency/Incident Response interoperability channels (from the DHS NIFOG document, for monitoring and interoperability if the situation dictates)
- Channels for local emergency services (Rochester Fire Dept VHF simulcast, etc. for monitoring)
-All NOAA Weather Radio broadcast frequencies

Perhaps with help from the Tech Committee I'd like to get this area-specific template put together and ready for distribution to whoever wants it within the next month or two in order to ease the changeover to the new ARES frequencies and increase our overall capability, commonality, and interoperability within our group and between possible served agencies or partnered groups.

Please let me know what you think!
-Collin AA0CN

2461. 10m net 7pm Tue night reminder

Yahoo group: rochester_hams
Date: 2017-12-05 13:49:04 UTC
From: dcnaatz@...
Topic: 2461 Message: 2461

Let's do another net tonight 28.325 7pm. An obvious topic is Q&As for the ARRL 10m contest that starts 6pm CT Friday. Will there be a weekend opening similar to last Tues night providing good conditions from Rochester to the eastern & southern US? Yes, we had 7 locals and 5 others check in last week, some from 1000 mi away!

Next week no net due to the RARC party http://www.rarchams.org/ http://www.rarchams.org/ Due to holiday busy time, I'm not going to plan for another net until Jan 2 but keep checking 10m for 2nd half of the month openings.

Holiday lights are not enough to cheer the hardened Ham. What really counts is getting on-the-air and operating and that's what this month's Hamgram is about: operating! It's true there's more in this issue like a hint about the holiday party and who's-who among the executive board, but the focus is operating as Mike, W0IH, and Mike, W0VTT, will tell you.
Happy Holidays and a hearty 73,
Bob

2468. Yaesu Wires-X repeater

Yahoo group: rochester_hams
Date: 2017-12-29 18:59:22 UTC
From: k0uc@...
Topic: 2468 Message: 2468

Hello everyone...

I have a repeater on the air (at my home) that supports FM and Yaesu Fusion digital (DR1X hardware).
It is internet connected via Wires-X to Yaesu network.

Currently the machine is running in FM mode only, so that everyone is able to access it (or listen).

Frequency is 443.000 (+5.00 TX)

PL: 136.5

Generally is linked to the DARC "Room"/channel.
DARC is the Digital Amateur Radio Club. It is a MN based group of repeaters around the state.
more Info: http://kd0ylg-darc.byethost8.com/about/

Feel free to change to another room or try out any features.

Power is about 15 watts. Coverage is best in North Rochester area.
Base or higher power mobile is best for access.

If you want to try out Wires-X linking or just listen, please feel free to experiment.

Please let me know if you have any questions or notice any problems.

If you transmit #66666 the repeater will tell you what (if anything) it is connected to in the Wires-X network.

2473. CQ the 10 meter net 7pm Tue Jan 16

Yahoo group: rochester_hams
Date: 2018-01-16 15:06:32 UTC
From: dcnaatz@...
Topic: 2473 Message: 2473

As briefly discussed last Tues during the Rochester Amateur Radio Club meeting, let's try for a few more 10 meter nets 7 pm Tuesdays on 28.,325 upper sideband voice. If you are interested please add that on your personal calendars the next few week Tuesdays.

I will call the net tonight but am looking for someone to lead it future Tuesdays. Variety is good. Unfortunately 10m has not been real "open" at least when I have checked, ie no signals even during the RTTY contest 10 days ago, not many CW beacons, haven't heard any FT-8 signals either after trying that mode for the first time this past Saturday. Anyone else have any luck on 10m the past few weeks? 73 K0VH

2475. Repeater information and misc.

Yahoo group: rochester_hams
Date: 2018-01-20 18:43:27 UTC
From: steve wiebke
Topic: 2475 Message: 2475

See information starting at objectives for details.

On February 4th the net on the 147.255 repeater will begin notification that beginning February 11th the net will be on the 146.625 and on February 25th the net is on the 146.820 repeaters
The net preamble will be changed to reflect the repeater rotation information.

PS: Reminder we are using the Minnesota ARES simplex frequency plan. Up date your radio(s) memories.

The 147.255 is the primary repeater for SKYWARN, and ARES activation. The 146.820 is the back up repeater as needed.

Mark your calendars for the SE MN/Olmsted Skywarn training on March 19th at the International Convention Center

Objective to achieve:
1. Test the 3 area VHF repeaters once a month.
2. Do not make it hard to know which repeater will be used on any Sunday of any month.3. Allow enough time to educate hams of the repeater rotation changes.4. Put in safe guards for visitors, infrequent check ins, or out of area stations to redirect them to, or relay information to the 146.625 or 146.820 nets

Conclusion:
The purpose is to monthly test each repeaters operation during a net from around the county for quality control, and to test our radio(s) on each VHF repeater. If there are issues during the net, we may verify it is the repeater or the operating station, and determine a possible cause and fix to make sure Olmsted ARES operators equipment is OK. We are fortunate to have 3 VHF repeaters. Are we sure "ALL" our radios will communicate with them? We operate the way we train, our flexibility and equipment reliability are the basics we build on.
We will use the 147.255 repeater on (odd numbered) the 1st, 3rd and if applicable the 5th Sunday of each month. We use the 146.625 on the 2nd, Sunday and the 146.820 on the 4th Sunday (even numbered) of each months nets repeatedly. This tests all our repeaters, and establishes a rotational schedule on the nets. On the Sundays we are not on the 147.255 repeater, NCS ask for a station before the start of the net, to begin announcing and monitory the 147.255 that he/she is listening for redirects or relays. The NCS also announces the 147.255 is being monitored during those nets. The NCS also reports the repeater to be used for the following Sunday's net. This is training to operate frequencies simultaneously, and relaying information from stations that can hear, but not contact the 625 or 820, when used, and allows them to respond through the relay station.

The first non-255 net is on February 11th (2nd Sunday), on the 625. On February 25th (4th Sunday) on the 820. We will announce this change on the January nets, at club meetings, by e-mails, on the club web site, and at social events.
Contact me with questions via e-mail w0stv@..., or phone at 254-3993
PS: I have applied for the ARRL 2018 requirement that all ARES groups have a contact ID

number. More information later.

The MN Severe Storms Conference is back!

2018 Conference to be held on April 7th.

Returning to the Schulze Hall, University of St. Thomas, Minneapolis

First Keynote Speaker: Storm Chaser Skip Talbot

Hi Steve,
The 12th Minnesota Severe Storms Conference will be held on April 7, 2018 on the campus of the University of St. Thomas in Minneapolis.

The Minnesota Severe Storms Conference works to help Train... Equip... and Connect... severe storms spotters and chasers throughout the region through this one-day conference with speakers and great conversation about severe weather.

We will again be bringing in great speakers to talk about severe storms, meteorology, technology advancements, and what you as a spotter can do to help during severe storms. Our first announced keynote speaker this year will be Mr. Skip Talbot. Skip spoke at the conference a few years ago and we wanted to bring him back due to the great feedback we got after his presentation!

Skip Talbot is a storm chaser and software developer from Illinois. Captivated by and compelled to witness tornadoes since the 1990 Plainfield F5 tracked near his childhood home, Skip has been roaming the plains in search of supercells and tornadoes since 2003. He’s participated in endeavors from forecasting for a Tornado Intercept Vehicle IMAX movie, piloting small aircraft for aerial supercell shoots, to driving for the College of DuPage’s Thunderstorm Lab. Skip is also a Co-author on a scientific paper regarding crowd-sourcing

data from the El Reno, OK tornado for scientific purposes.

Skip will be back with a great presentation titled "Field Tactics for Practical Storm Spotting". He'll go through the tools he uses while forecasting storms and while in the field with great visual impact and direct applicability to your spotting in the field. Skip brings great passion to the community and you will not want to miss this!

More info will be coming soon, we can't wait to see you on April 7th! |

2479. Sunday net updates

Yahoo group: rochester_hams
Date: 2018-02-07 04:28:57 UTC
From: steve wiebke
Topic: 2479 Message: 2479

We begin rotating repeaters this month. The RARC net preamble has changed. All NCS need to copy the new preamble and note the repeater rotations. John NZ0S is next Sundays NCS on the 146.625 pl 100 repeater. The 147.255 will be monitored by a station when is is not the used for the net. W0STV will be the monitoring station. Note that echolink will be connected during the sunday nets
Steve-W0STVOlmsted ARES-ECThe more preparation, the less confusion.

2480. RARC net information

Yahoo group: rochester_hams
Date: 2018-02-08 02:28:26 UTC
From: steve wiebke
Topic: 2480 Message: 2480

Reminder the 146.625 repeater will be used this Sunday for the ARES net. I changed the preamble on 2-7-18, If you are on the NCS operators list down load it for your station net operation.
Any questions via reply e-mail please.
VE testing this Thursday at 6:30 at the American Red Cross building in Rochester.

2483. Radio operators

Yahoo group: rochester_hams
Date: 2018-02-12 15:31:26 UTC
From: steve wiebke
Topic: 2483 Message: 2483

The current ARES net control station schedule ends this April. Before the next schedule is made is there anyone that wants to be added to our NCS schedule.
ARES net control stations are important to our operations. The more NCS operators we have, the better we are as ARES to help others.. I urge you to sign up. We all fear making mistakes doing something new. Just like talking on the radio for your first time. If you are interested in becoming a NCS operator, contact me at club meetings, on local nets, or call me at 254-3993. We have people to work with you, and shadow operate with you as a joint NCS until you feel you can solo.
Thank you for your time and commitment to ARES.
Steve-W0STVOlmsted ARES-ECThe more preparation, the less confusion.

Yahoo group: rochester_hams
Date: 2018-02-14 15:40:58 UTC
From: steve wiebke
Topic: 2484 Message: 2484

The builders and users group meets this Saturday at Fire station #2, from 9 to ?. We plan to work on the ARES trailer equipment, for quick deployment, and secure traveling.
If you have something you want to accomplish then, send out your request be reply e-mail and we will see if we can accommodate you.
It was a fun RARC meeting last night. The program was well presented. When club members stay to visit long after a meeting ends, it shows we have a network of hobbyist that enjoy each others interest and conversation.
PS:As long as people want to stay to talk after a meeting, the room will stay open.
Please see if you can help with the Iron Christian Ranch "fat tire" bike race Saturday February 24th, A sign up is on the web site of the Rochester Amateur Radio Club. Click on the header "Activities", then "Public Service", and then, "sign up" icon. You can click on any service event name to see its operational details.
The D-star repeater is working. Great to be talking on the repeater again.
NOTICE ....This coming Sunday"s ARES net is on the 147.255, PL-100 repeater at 9:00 pm. 73

February 26, 2018
|
|
Registration Open for AUXCOMM Course - Only 5 spots left

The Auxiliary Communications (AUXCOMM) course is designed for auxiliary emergency communicators and groups who volunteer to provide backup emergency radio communications support to public safety agencies.

This course is intended to supplement and standardize an operator's experience and knowledge of emergency amateur radio communications in a public safety context.

Prerequisites include an active FCC amateur radio license, past experience in auxiliary emergency communications, desire to work with COML's in a NIMS/ICS environment, affiliation with a public safety agency, completion of IS-100b, IS-200b, IS-700a, IS-800b.

The two-day course, March 17 and 18, will be held at the Hennepin County Sheriff's Office Emergency Communications Facility, 1245 Shenandoah Lane North, Plymouth, Minnesota. Class will be 10 hours each day, and registration is limited to 30 students.

Clickhere for complete AUXCOMM course and registration information. Last day to register is March 1.

|

in the picture – The new Inrico TM-8

A Pioneering Background

I was musing recently on the wonderful history of Amateur Radio, from the early pioneers with spark transmitters and the race to get the first signals across the Atlantic, up to the Microwave enthusiasts who developed the way forward for space communications and satellite technology (and, whisper this, mobile phone technology!)

The history of Ham Radio and RF technology is inextricably linked – there was even a time here in the UK where it was believed, anecdotally, that a Ham Radio callsign would help you to get a job with the BBC!

However change came very quickly, relatively speaking, in the early history of radio. From Marconi’s experiments to the first Public Broadcast Stations was only 25 or so years. TV was only another 15 years or so behind that, and so on…

Resistance (or not feeling at “Ohm”)

Yet the history of Ham Radio is also one of resistance to change – not from the pioneers, they were often instigators of it, but from the “everyday” Hams.

Let me see if I can give you some examples, with my tongue planted very firmly in my cheek…

“That’s not Real Ham Radio!”

The early Hams used CW pretty much exclusively. So when AM arrived as one of the first of the voice modes, there was a bit of an uproar…“It’s not real Ham Radio! Real Ham Radio involves using a Morse Key! What in world is the hobby coming to, using voice to communicate over the airwaves? It’s sacrilege!”

But life went on, AM found acceptance and all was well in Hamland once again.

Then transistor technology arrived in the late 1940s and early 1950s, provoking quite a response. “Hang on! That’s not real Ham Radio. Real Ham Radios glow in the dark – we can’t be having this miniature technology – they’ll never last as long as valves or be as reliable”

But life went on, solid state devices found acceptance and all was well in Hamland once again.

Then SSB arrived and there was more discontent… “That’s not real Ham Radio. Real Ham Radios don’t sound like Donald Duck! It’s a fad, it will soon fall away once people get fed up of hearing those silly voices”

But life went on, SSB found acceptance and all was well in Hamland once again.

Then FM and repeaters arrived and there was polarisation within the hobby (and it wasn’t horizontal or vertical either!) “That’s not real Ham Radio. Real Ham Radio doesn’t need to use that thing on top of the hill to help your signal get somewhere! Real Ham Radio is point to point!”

But life went on, FM & repeaters found acceptance and all was well in Hamland once again.

Then Packet Radio arrived and there was real trouble… “That’s not real Ham Radio. Real Ham Radio doesn’t need one of those new-fangled computer thingies in order to work. Get your key or your mic out and start working other Hams properly!”

But life went on, Packet Radio found acceptance and all was well in Hamland once again.

Then Digimodes arrived and there was yet more strife… “That’s not real Ham Radio. Real Ham Radio doesn’t involve typing messages to other Hams – and those perishing computers again! What on Earth are they doing in the hobby?”

But life went on, Digimodes found acceptance and all was well in Hamland once again.

Then Digital Voice modes arrived and there were some very serious disagreements… “That’s not real Ham Radio. Real Ham Radios don’t sound like R2D2! Real radios don’t use the Internet to help them get round the world, they ABSOLUTELY HAVE to use atmospheric propagation. What is happening to this hobby???”

But life went on, D-STAR and other Digital Voice modes found acceptance and all was well in Hamland once again.

Then we arrive at today and Network Radios come onto the scene and all hell breaks loose! “That’s not real Ham Radio. This is playing at Ham Radio – there’s no Amateur RF so it is simply not Ham Radio. What is more, I worked hard for my license, everyone else should have to too! How dare people enjoy communications in an incorrect manner!”

So will life go on and will all ever be well in Hamland again?

The 21st Century Challenge

This is why the advent of Network Radios represents such a challenge to us as Hams – it is causing us to completely rethink what it means to be a Radio Amateur in 2018 and beyond.

And we will have to start facing up to questions similar to these…

- What exactly defines a Radio Amateur?
- What do we mean by “Amateur RF”?
- Is it RF generated by someone who is an Amateur?
- Or is it RF generated on a particular band allocated to us by the government?
- If so, does it absolutely HAVE to be that?

- Can it be nothing else?
- Does any of this really matter?

What about our bands?

As Hams we are very “attached” to our bands. Whether it be 160m or 2m, we almost have a psychological sense of “ownership” of them.

We have “favourite” bands, we have bands we never frequent.

We even have “our” spot frequencies and some Hams will get somewhat “assertive” if a fellow amateur who is not in their “group” dares to use “their” frequency!

And yet in the 21st Century, I believe that the whole concept of bands & frequencies is becoming ever more fluid. Why would this be?

An example from Broadcast Radio

Not that long ago, we could tune into broadcast stations on Long Wave (LF), Medium Wave (MF), Short Wave (HF) and FM (VHF Band II). Stations frequently referred to themselves by frequency: “247 metres Radio 1” or “1152 AM” for example. It was seen part of the station’s identity – many had the frequency in their station names!

But today, we increasingly hear less of this. When you listen to broadcast stations these days, they seem to be eschewing giving out frequencies, instead they just announce that they are on “FM, DAB and Digital” or something similar to that.

Why? Because radio is something you probably increasingly consume in one of two ways – either digitally (via DAB or Satellite or similar means) or by streaming via the Internet. Frequencies and by extension, bands, are not as relevant as they once were.

Moving Out!

The large broadcasters are also increasingly moving away from “traditional” radio.

On Short Wave – only a few countries & various religious groups seem to operate there now. The big guys are moving out of Long and Medium Wave too. If commercial broadcasters are moving away, we need to ask why.

Do Bands matter?

I have a suspicion that this is, in part at least, because bands and frequencies don’t matter so much these days. Domestic radio appliances are more about push buttons and screens that get you to your station instantly, rather than tuning dials with frequencies. It’s the end product that is important, not necessarily the manner in which it gets to you.

Who tunes a modern broadcast radio in these days with a manual tuning dial? Anyone? It was the main knob on all radios not that many years ago! I can even remember tuning old VHF TV in with a dial in my early days on this planet – that really seems odd now!

Going one step further, many broadcast stations are not even using direct RF at all these days! We still refer to them as “radio stations” (or occasionally “Internet radio stations”)

Is there any reason to think Ham Radio as a hobby will not invariably move in a similar kind of direction? One of our strengths historically as Hams has been that we are good at embracing new technologies and adapting them for our own uses.

The point I am leading up to is this – I suspect “bands” and “frequencies” are not really as big an issue in the digital age as we might like them to be.

In essence, bands only exist because of propagation.

Propagation again

160, 40m, 20m,10m, 2m etc. are all, in reality, “line-of-sight” bands. To over-simply the subject, it is the ionospheric or tropospheric layers that enhance this line-of-sight propagation and turn it into something else.

Each band has differing propagation qualities as a result, giving each band its “character” and for some, the study of propagation in itself is a fascinating part of the hobby.

Man-made propagation is just different

When we think of (and use) the Internet as a man-made propagating medium (which is what it is – it propagates signals around the world) then the concept of bands becomes redundant.

The Internet is like one, almost infinitely wide, worldwide “band”, constantly open S9+40 to all countries 24/7 with few vagaries – and not just for voice, but for vision and other digital modes as well.

Put like that, who wouldn’t want to use it? Would it actually matter what “band” you were (or were not) on, if there even were one?

So the concept of “bands”, by which so many of us define our activities, may be crumbling in front of us in this digital age and we may not even realise it yet! That is not to say our bands don’t still exist, by the way – clearly they do. It is just that, to many people these days, bands are a foreign concept.

And then what?

As the hobby starts to come to terms with some of the implications of this, other issues then start to arise, such as…

- Do we need an exam any more to get a licence?
- Do we even need a licence?
- What form or forms should it take, if so?
- Might we see an influx of new people coming into the hobby because the entry to it is more straightforward?
- How would we cope with that?
- Do we even want new people coming in, especially if their views differ from ours?
- What will the hobby even look like in 20 years time?
- What happens to our “traditional” bands?

I expect to see a lot of discussion in the future about this – it’s actually quite exciting!

Out of the Comfort Zone…

However it will make many of us feel extremely uncomfortable – the ground is shifting beneath our feet and the traditional raison d'être of Ham Radio is waiting to be challenged to change and adapt…

I don't see this as a bad thing – intelligent honest debate is to be welcomed. The most important thing is to keep our minds and our thinking wide open. We shouldn't reject something just because it is new or because it challenges our preconceived ideas of where radio is going in general.

Equally, we shouldn't throw the baby out with the bathwater and reject traditional Ham Radio as it has been for years. The Ionosphere and the Internet are complementary, not in competition.

My own opinion?

If you have read this far and you really want my personal thoughts…

Why can we not have the best of both worlds? Surely we can.

Network radios (at this stage in their development at least) are not contest radios for example, and the Internet is not yet a contest-friendly mode of propagation. (That might change of course!) so contesting is still best on the traditional Ham bands. I'll see you on 80 metres – 59 001 OM…

However, regular reliable high-quality contacts around the world are but one thing Network Radios excel at, so why not just use that when you want to (or when the HF bands are full of noise or are otherwise dead)? I do! I don't see the expansion of choice in the hobby as a bad thing.

Enjoyment is the key

Does the fact that I am transmitting on cellular frequencies at 800MHz, 900MHz, 1800MHz, 2100MHz or on Wi-Fi on 2.4GHz or 5GHz matter? Is there something intrinsically evil about that? Is there more virtue in using 21 MHz or 432MHz, for example? They are just "frequencies" after all.

I prefer to see myself following the motto of my local radio club, "Having fun with RF". Whether I choose to use a Network Radio or a Yaecomwood super-duper base station is not as relevant to me. Enjoyment of the hobby is everything, otherwise why have a hobby?

Whichever way this debate goes and whichever direction this great hobby takes, my line would be to keep all the richness of every aspect of the hobby.

In other words, to go back to the title of this piece and change but one word, "It's ALL 'real' Ham Radio"

Has anyone been running this net since January? I've been away to warmer places but will see if there is interest calling a net tonight Tues 3/20 7pm CDT on 28.325. I listened on 10m the past three days and haven't heard a thing, no cw beacons or any digital sigs. But Spring is at least supposed to be here and that means E SKIP TIME! Take a listen regularly, especially 28.2-28.3 are there cw beacons? Even if you can't copy CW that's a good indicator conditions are open in the US ... somewhere. 73 Dave KØVH

I'm finally getting around to reprogramming my radios with the new ARES Freqs. I also like to have a few of the area repeaters in my radio too. The problem I have Is I've been looking online and a 2016-2017 version of the repeater directory and in some cases they don't match. So I thought I'd throw it out to the group and see what everyone else has. Let me know if these are correct, if not please state the correct freqs. Thanks John - N0HZN
Albert lea 443.525
Austin 146.730
Faribault 146.790
Mankato 147.240
Redwing 147.300
Spring Valley 147.015
Wabasha 146.745
Waseca 146.715
Winona 146.640

Then what does everyone use in the Twin Cities?
Thanks in advance - John

2517. Olmsted ARES

Yahoo group: rochester_hams
Date: 2018-04-03 19:20:42 UTC
From: steve wiebke
Topic: 2517 Message: 2517

Olmsted ARES is promoting digital communications. Winlink is one that looks and works like most e-mails. The difference is that it can be sent and received by a radio/TNC or sound card interface, with out any local internet or with internet like your e-mail. There will be a winlink VHF node established in Olmsted soon. With power outage most internet will be off line. The Olmsted system will be on DSL with emergency power back up Take a look at setting up your winlink at 3-METERSinc Winlink "RMS Express - Part 1" If you still have questions call me 254-3993

2518. Fw: RE: ARES Freq

Yahoo group: rochester_hams
Date: 2018-04-08 16:17:25 UTC
From: steve wiebke
Topic: 2518 Message: 2518

These are the established mobile units cross banding frequencies using UHF for each of the Olmsted area repeaters. These standards will allow one mobile unit to be used by multiple HT's if needed. These are also the UHF standard simplex frequencies when not cross-banding.

Cross-banding to the 255 repeater use UHF Delta 446.025

Cross-banding to the 820 repeater use UHF Echo 444.725

Cross-banding to the 625 repeater use UHF Fox 445.975

2519. Disaster after action report

Yahoo group: rochester_hams
Date: 2018-04-08 16:32:08 UTC
From: steve wiebke
Topic: 2519 Message: 2519

This is an intense report but it gives a picture of what did and did not happen in Puerto Rico with the hams that were deployed there. There is one constant in every disaster and that is you have to improvise. Thanks for your time.
http://www.arrl.org/files/file/Public%20Service/ARES/2017%20Hurricane%20Season%20AAR.pdf

Steve-W0STVOlmsted ARES-ECThe more preparation, the less confusion.

2520. Cross banding

Yahoo group: rochester_hams
Date: 2018-04-09 13:56:28 UTC
From: steve wiebke
Topic: 2520 Message: 2520

This is the established UHF simplex frequencies to each repeater cross-band pairing standard. For those that will have their mobile radios set up to do cross-banding, follow this pairing:

147.255 Pl-100 repeater use the UHF frequency Delta 446.025.
146.820 PL-100 repeater use the UHF frequency Echo 444.725
146.625 PL-100 repeater use the UHF frequency Fox 445.975
If you have your HT's programed to the new Minnesota simplex frequencies, you will hear each other on the simplex channel in the building and to and from the repeater if and when cross-banding is being used. Alpha through Charlie will strictly be only simplex frequencies.
Thanks for your time 73

Steve-W0STVOlmsted ARES-ECThe more preparation, the less confusion.

2521. BuG group cancelled

Yahoo group: rochester_hams
Date: 2018-04-14 01:32:29 UTC
From: John

2522. 10 meter net tonight Apr 17 7pm 28.325

Yahoo group: rochester_hams
Date: 2018-04-17 15:51:59 UTC
From: dcnaatz@...
Topic: 2522 Message: 2522

There still is some interest based on last week's RARC meeting so let's do a net at 7pm.
Nothing to do in the yard with all this white stuff right?
I am going to try and run it remote control so give me 1/2 a second for TR switching please.

2523. Public Service event

Yahoo group: rochester_hams
Date: 2018-04-22 18:22:26 UTC
From: steve wiebke
Topic: 2052 Message: 2523

Reminder that next Saturday April 28th starting at 9:00 AM the Rochester Amateur Radio Club is scheduled to do our DOT road clean up as part of the Rochester city wide "Make Rochester a litter bit better" program. The area is along Highway 52 between the Zumbro river bridge and 6th street overpass bridge. This is our last year we are scheduled to do clean up. We have one more session this fall.
Sign ups are on the RARC web site under the activities header, sub directory public service. Wear your vests, good shoes, gloves and if you have them, trash pick up tools. Litter bags with handles provided. Safety vest will be available for any new participants that do not own one. We stage at the Apache Mall SW area parking lot corner.
Talk in on 147.255 Pl100 repeater. We will use the VHF alpha simplex frequency for on site communications. Questions call 254-3993.
We will go for lunch at Beetles after the clean up. Thank you for your time and commitment to helping keep Rochester cleaner, and promoting RARC activities.
PS: If raining Saturday AM the clean up will move to the following Sunday 1:00 PM

Only have two people signed up if we do not get 10 will have to cancel this Saturdays clean up. Please sign up if you can attend.
I will send out the final notice this Friday if its a go or cancel.

Steve-W0STVOlmsted ARES-ECThe more preparation, the less confusion.

2525. RARC Social tonight/Thurs 515 or so?

Yahoo group: rochester_hams
Date: 2018-04-26 20:02:10 UTC
From: dcnaatz@...
Topic: 2525 Message: 2525

Perhaps our last Thursday social has achieved normalcy like Sat breakfasts it doesn't need remnders, but I wanted to confirm we still have a table reserved around 5:15 or so at WILDWOOD in SW Rochester tonight? I haven't been able to make it since January for various reasons but plan to stop by although I know there was some RARC discussion on a different quieter venue (although tonight it's nice enough to go outside).

2526. Post things early on this yahoo groups

Yahoo group: rochester_hams
Date: 2018-04-27 00:55:41 UTC
From: dcnaatz@...
Topic: 2526 Message: 2526

Sometimes things post within an hour on this group but many times they do not, so advice if you want a reminder put it out 12-24 hours EARLY. Case in point today (and I've noticed this randomly before):

I posted this RARC Social tonight/Thurs 515 or so today about 230pm, it shows logging into groups at 3pm but it did not go out for distribution until 645pm !!! Of course the event was over by then.
W0STV who was at the event also tried to post and got a reject/error message also to late to change.

73 Dave K0VH

2527. Public service canceled and an update

Yahoo group: rochester_hams
Date: 2018-04-27 01:21:22 UTC
From: steve wiebke
Topic: 2527 Message: 2527

This Saturdys DOT clean up April 28th has been canceled, too low attendance. Will schedule again at a later date.
The RARC social members that were at Wild Wood Bar and Grill were treated to free drinks and meals this evening. We were pleasantly surprised and thankful. Social ran from 5:30 to 7:55 PM.
See you next month.

Steve-W0STVOlmsted ARES-ECThe more preparation, the less confusion.

2528. MS-Twin Cities Needs Volunteers

2529. Olmsted Repeaters

Yahoo group: rochester_hams
Date: 2018-04-30 14:31:04 UTC
From: steve wiebke
Topic: 2529 Message: 2529

It was discussed at last nights ARES net, how to more effectively use our 3....(2 meter) repeaters by our local hams. The following protocol has been adopted
for our Olmsted repeaters for casual 2 meter communications. We ask that you use
the repeater from the last Sundays net during that week until the following Sunday. This will improve your chances by 66% to make contacts with each other and test your mobile radio to repeater communications during the week.
ARES nets are held on:
The odd numbered Sundays of the month, #1, #3 and sometimes #5 on the 147.255 repeaterFirst even numbered Sunday of the month, #2 on the 146.625 repeater.Second even numbered Sunday of the month, #4 on the 146.820 repeater
Listening for you on the 147.255 this week 73

Update: Operators Needed

Sat May 5, 2018 11:41 am (PDT) . Posted by:

"Chris Schultz" ctechy
Hi Everyone,
Please share with other groups or people that are interested we are down to two weeks form the MS Twin Cities on Sunday, May 20th. We need 5 more operators but would like to have 10 to do the job done. We need one SAG assistant operator and four rest operators for the Twin Cities ride. We are also only five weeks from the MS-150 on Saturday, June 9th and 10th. To sign-up for ether event use the link below
https://ms-scram.org/volunteer

Thanks,
Chris Schultz
